

The very nature of the energy industry requires efficient and reliable communication with staff and business partners, very often situated in remote locations. Unified communications and collaboration help bring widely dispersed workforces together, improving operations, driving innovation and increasing efficiency, while reducing risk and ensuring employee safety.

Microsoft Teams and Skype for Business unified communications and collaboration solutions provide the tools to enable connectivity from any location, at any time and on any device. AudioCodes One Voice portfolio of products and solutions help energy companies unify multinational communications silos created through multiple mergers and acquisitions and migrate existing telephony systems to Microsoft Teams and Skype for Business reliably and cost-effectively.

AudioCodes Benefits for Energy Companies

Reduce global communications costs

Full voice enablement for Microsoft UC environments, on-premises and in the cloud
Seamless connectivity with cost-effective SIP trunks

Drive innovation and collaboration across global teams

Simplify internal and external voice communications through consolidation of silos, concentration of SIP trunk connections, using internal WAN for long distance calls

Increase staff productivity and drive user adoption

Certified IP phones offer a familiar calling experience with full Microsoft Teams and Skype for Business integration

Integration of essential legacy equipment

Seamlessly integrate legacy analog phones and faxes into the Microsoft Teams/Skype for Business infrastructure

Cost-effective migration from existing solutions

Certified SBCs enable controlled migration from legacy systems

Improve operations and increase reliability

Centralized management and monitoring giving IT managers global control over the voice network
