| <b>Release Notes .....</b>                   | <b>1</b>  |
| <b>Notice.....</b>                           | <b>7</b>  |
| WEEE EU Directive .....                      | 7         |
| Customer Support.....                        | 7         |
| Stay in the Loop with AudioCodes .....       | 7         |
| Abbreviations and Terminology.....           | 7         |
| Related Documentation .....                  | 7         |
| Document Revision Record .....               | 8         |
| Documentation Feedback .....                 | 9         |
| <b>1 Introduction.....</b>                   | <b>11</b> |
| 1.1 Software Revision Record .....           | 11        |
| 1.2 Supported Products.....                  | 12        |
| 1.3 Terms Representing Product Groups.....   | 13        |
| <b>2 Latest Release (LR) Versions .....</b>  | <b>15</b> |
| 2.1 Version 7.20 .....                       | 15        |
| 2.1.1 Version 7.20A.260.286 .....            | 15        |
| 2.1.1.1 Resolved Constraints.....            | 15        |
| 2.1.2 Version 7.20A.260.180 .....            | 16        |
| 2.1.2.1 New Features .....                   | 16        |
| 2.1.2.2 Resolved Constraints.....            | 16        |
| 2.1.3 Version 7.20A.260.110 .....            | 17        |
| 2.1.3.1 Resolved Constraints.....            | 17        |
| 2.1.4 Version 7.20A.260.109 .....            | 18        |
| 2.1.4.1 Resolved Constraints.....            | 18        |
| 2.1.5 Version 7.20A.260.095 .....            | 19        |
| 2.1.5.1 New Features .....                   | 19        |
| 2.1.6 Version 7.20A.260.012 .....            | 21        |
| 2.1.7 Version 7.20A.260.007 .....            | 22        |
| 2.1.7.1 New Features .....                   | 22        |
| 2.1.8 Version 7.20A.260.005 .....            | 23        |
| 2.1.8.1 New Features .....                   | 23        |
| 2.2 Version 7.20CO .....                     | 25        |
| 2.2.1 Version 7.20CO.258.034 .....           | 25        |
| 2.2.1.1 New Features .....                   | 25        |
| 2.2.2 Version 7.20CO.256.016 .....           | 26        |
| 2.2.2.1 New Features .....                   | 26        |
| <b>3 Capacity .....</b>                      | <b>27</b> |
| 3.1 SIP Signaling and Media Capacity .....   | 27        |
| 3.2 Session Capacity per Feature.....        | 33        |
| 3.3 Detailed Capacity.....                   | 35        |
| 3.3.1 Mediant 500 E-SBC .....                | 35        |
| 3.3.2 Mediant 500L Gateway and E-SBC .....   | 36        |
| 3.3.3 Mediant 800 Gateway & E-SBC.....       | 37        |
| 3.3.3.1 Mediant 800A/B Gateway & E-SBC ..... | 37        |
| 3.3.3.2 Mediant 800C Gateway & E-SBC.....    | 40        |
| 3.3.4 Mediant 1000B Gateway & E-SBC .....    | 43        |
| 3.3.4.1 Analog (FXS/FXO) Interfaces.....     | 43        |

|          |  |           |
|----------|--|-----------|
| 3.3.4.2  | BRI Interfaces .....   | 44        |
| 3.3.4.3  | E1/T1 Interfaces .....   | 45        |
| 3.3.4.4  | Media Processing Interfaces .....                                  | 46        |
| 3.3.5    | MP-1288 Analog Gateway & E-SBC.....                                | 47        |
| 3.3.6    | Mediant 2600 E-SBC .....   | 48        |
| 3.3.7    | Mediant 4000 SBC .....   | 49        |
| 3.3.7.1  | Forwarding Session Capacity per Feature without Transcoding.....   | 50        |
| 3.3.8    | Mediant 4000B SBC.....   | 50        |
| 3.3.8.1  | Forwarding Session Capacity per Feature without Transcoding.....   | 51        |
| 3.3.9    | Mediant 9000 SBC .....   | 52        |
| 3.3.9.1  | Forwarding Session Capacity per Feature without Transcoding.....   | 53        |
| 3.3.10   | Mediant 9000 Rev. B / 9080 SBC .....                               | 54        |
| 3.3.10.1 | Forwarding Session Capacity per Feature without Transcoding.....   | 55        |
| 3.3.11   | Mediant 9000 / 9000 Rev. B / 9080 SBC with Media Transcoders ..... | 55        |
| 3.3.12   | Mediant 9030 SBC .....   | 57        |
| 3.3.12.1 | Forwarding Session Capacity per Feature without Transcoding.....   | 58        |
| 3.3.13   | Mediant Cloud Edition (CE) SBC .....                               | 59        |
| 3.3.13.1 | Mediant CE SBC for AWS EC2 using OS Version: 6 .....               | 59        |
| 3.3.13.2 | Mediant CE SBC for AWS EC2 using OS Version: 8 .....               | 60        |
| 3.3.13.3 | Mediant CE SBC for Azure using OS Version: 6.....                  | 62        |
| 3.3.13.4 | Mediant CE SBC for Azure using OS Version: 8.....                  | 63        |
| 3.3.13.5 | Mediant CE SBC for VMware .....                                    | 64        |
| 3.3.14   | Mediant Virtual Edition (VE) SBC .....                             | 65        |
| 3.3.14.1 | Mediant VE SBC for VMware Hypervisors with Hyper-Threading .....   | 65        |
| 3.3.14.2 | Mediant VE SBC for OpenStack and VMware Hypervisors .....          | 66        |
| 3.3.14.3 | Mediant VE SBC for Amazon AWS EC2 using OS Version: 6.....         | 71        |
| 3.3.14.4 | Mediant VE SBC for Amazon AWS EC2 using OS Version: 8.....         | 73        |
| 3.3.14.5 | Mediant VE SBC for Azure (OS Version: 6) .....                     | 76        |
| 3.3.14.6 | Mediant VE SBC for Azure (OS Version: 8) .....                     | 77        |
| 3.3.14.7 | Mediant VE SBC for Hyper-V Hypervisor .....                        | 78        |
| 3.3.14.8 | Mediant VE SBC with Media Transcoders .....                        | 81        |
| 3.3.15   | Mediant Server Edition (SE) SBC .....                              | 83        |
| 3.3.15.1 | Forwarding Session Capacity per Feature without Transcoding.....   | 84        |
| 3.4      | Capacity per Configuration Table.....                              | 85        |
| <b>4</b> | <b>Supported SIP Standards .....</b>                               | <b>91</b> |
| 4.1      | Supported SIP RFCs .....   | 91        |
| 4.2      | SIP Message Compliancy.....  | 95        |
| 4.2.1    | SIP Functions.....   | 95        |
| 4.2.2    | SIP Methods.....   | 95        |
| 4.2.3    | SIP Headers.....   | 96        |
| 4.2.4    | SDP Fields .....   | 97        |
| 4.2.5    | SIP Responses .....  | 97        |

## List of Tables

|---|----|
| Table 1-1: Software Revision Record of LR Versions .....  | 11 |
| Table 1-2: SBC and Media Gateway Products Supported in Release 7.2 .....                                    | 12 |
| Table 1-3: Terms Representing Product Groups.....   | 13 |
| Table 2-1: Resolved Constraints in Version 7.20A.260.286 .....  | 15 |
| Table 2-2: Resolved Constraints in Version 7.20A.260.180 .....  | 16 |
| Table 2-3: Resolved Constraints in Version 7.20A.260.110 .....  | 17 |
| Table 2-4: Resolved Constraints in Version 7.20A.260.109 .....  | 18 |
| Table 3-1: SIP Signaling and Media Capacity per Product .....   | 27 |
| Table 3-2: Feature Capacity per Product.....  | 33 |
| Table 3-3: Mediant 500 E-SBC (Non-Hybrid) - SBC Capacity .....  | 35 |
| Table 3-4: Mediant 500 Hybrid E-SBC (with Gateway) - Media & SBC Capacity .....                             | 35 |
| Table 3-5: Mediant 500L E-SBC (Non-Hybrid) - SBC Capacity .....   | 36 |
| Table 3-6: Mediant 500L Hybrid E-SBC (with Gateway) - Media & SBC Capacity .....                            | 36 |
| Table 3-7: Mediant 800A/B Gateway & E-SBC - SBC Session Capacity per Capabilities (SBC Only) ..             | 37 |
| Table 3-8: Mediant 800A/B Gateway & E-SBC - Channel Capacity per Capabilities (with Gateway) ..             | 38 |
| Table 3-9: Mediant 800C Gateway & E-SBC - SBC Session Capacity per Capabilities (SBC Only)....              | 40 |
| Table 3-10: Mediant 800C Gateway & E-SBC - SBC Session Capacity per Capabilities with Gateway .....         | 41 |
| Table 3-11: Mediant 1000B Analog Series - Channel Capacity per DSP Firmware Template .....                  | 43 |
| Table 3-12: Mediant 1000B BRI Series - Channel Capacity per DSP Firmware Template .....                     | 44 |
| Table 3-13: Mediant 1000B E1/T1 Series - Channel Capacity per DSP Firmware Templates .....                  | 45 |
| Table 3-14: Transcoding Sessions Capacity per MPM According to DSP Firmware Template for Mediant 1000B..... | 46 |
| Table 3-15: MP-1288 Gateway - Session Capacity.....   | 47 |
| Table 3-16: Mediant 2600 E-SBC - Transcoding Capacity per Coder Capability Profile .....                    | 48 |
| Table 3-17: Mediant 4000 SBC - Transcoding Capacity per Coder Capability Profile .....                      | 49 |
| Table 3-18: Mediant 4000 SBC - Forwarding Capacity per Feature .....  | 50 |
| Table 3-19: Mediant 4000B SBC - Transcoding Capacity per Coder Capability Profile .....                     | 50 |
| Table 3-20: Mediant 4000B SBC - Forwarding Capacity per Feature.....  | 51 |
| Table 3-21: Mediant 9000 SBC - Transcoding Capacity per Coder Capability Profile .....                      | 52 |
| Table 3-22: Mediant 9000 SBC - Forwarding Capacity per Feature .....  | 53 |
| Table 3-23: Mediant 9000 Rev. B / 9080 - Transcoding Capacity per Coder Capability Profile .....            | 54 |
| Table 3-24: Mediant 9000 Rev. B / 9080 SBC - Forwarding Capacity per Feature .....                          | 55 |
| Table 3-25: Single Media Transcoder (MT) - Transcoding Capacity per Profile .....                           | 55 |
| Table 3-26: Mediant 9030 SBC - Transcoding Capacity per Coder Capability Profile .....                      | 57 |
| Table 3-27: Mediant 9030 SBC - Forwarding Capacity per Feature .....  | 58 |
| Table 3-28: Forwarding Capacity per MC Instance Type .....  | 59 |
| Table 3-29: Transcoding Capacity per c4.4xlarge MC .....  | 59 |
| Table 3-30: Forwarding Capacity per MC Instance Type .....  | 60 |
| Table 3-31: Transcoding Capacity per c5.4xlarge MC .....  | 61 |
| Table 3-32: Forwarding Capacity per MC.....   | 62 |
| Table 3-33: Transcoding Capacity per DS3_v2 MC .....  | 62 |
| Table 3-34: Forwarding Capacity per MC.....   | 63 |
| Table 3-35: Transcoding Capacity per MC .....   | 63 |
| Table 3-36: Mediant CE SBC on VMware with Hyper-Threading - Transcoding Capacity .....                      | 64 |
| Table 3-37: Mediant VE SBC on VMware with Hyper-Threading - Transcoding Capacity .....                      | 65 |
| Table 3-38: 2-vCPU Mediant VE SBC on OpenStack/VMware - Transcoding Capacity .....                          | 66 |
| Table 3-39: 2-vCPU Mediant VE SBC on OpenStack/VMware - Forwarding Capacity per Feature ....                | 67 |
| Table 3-40: 4-vCPU Mediant VE SBC on OpenStack/VMware - Transcoding Capacity .....                          | 68 |
| Table 3-41: 4-vCPU Mediant VE SBC on OpenStack/VMware - Forwarding Capacity per Feature ....                | 69 |
| Table 3-42: 8-vCPU Mediant VE SBC on OpenStack/VMware - Transcoding Capacity .....                          | 69 |
| Table 3-43: 8-vCPU Mediant VE SBC on OpenStack/VMware - Forwarding Capacity per Feature ....                | 70 |
| Table 3-44: Mediant VE SBC on c4.2xlarge - Transcoding Capacity.....  | 71 |
| Table 3-45: Mediant VE SBC on c4.8xlarge - Transcoding Capacity.....  | 71 |
| Table 3-46: Mediant VE SBC on Amazon EC2 - Forwarding Capacity per Feature .....                            | 72 |
| Table 3-47: Mediant VE SBC on c5.2xlarge - Transcoding Capacity.....  | 73 |

|  |    |

## WEEE EU Directive

Pursuant to the WEEE EU Directive, electronic and electrical waste must not be disposed of with unsorted waste. Please contact your local recycling authority for disposal of this product.

## Customer Support

Customer technical support and services are provided by AudioCodes or by an authorized AudioCodes Service Partner. For more information on how to buy technical support for AudioCodes products and for contact information, please visit our website at <https://www.audiocodes.com/services-support/maintenance-and-support>.

## Stay in the Loop with AudioCodes

## Abbreviations and Terminology

Each abbreviation, unless widely used, is spelled out in full when first used.

Throughout this manual, unless otherwise specified, the term *device* refers to the AudioCodes products.

## Document Revision Record

| LTRT  | Description  |
|-------|--|
| 27715 | SRTP capacity update for Mediant 800C  |
| 27710 | MSRP capacity added  |
| 27649 | Capacity updated for Proxy Sets and Access List tables   |
| 27548 | Ver. 7.20A.260.286   |
| 27541 | New CRMX module (Ver. 7.20A.260.005)   |
| 27529 | Ver. 7.20A.260.180   |
| 27524 | Ver. 7.20CO.258.034  |
| 27521 | Ver. 7.20A.260.110   |
| 27515 | Ver. 7.20A.260.109; Mediant 800C hybrid capacity updated.  |
| 27511 | Typos ("DS1_v1" replaced with "DS1_v2")  |
| 27505 | Feature added (On-Demand SIP-Based Media Recording) to Ver. 7.20A.260.005; MCPProfile parameter added to Section Mediant CE SBC for VMware |
| 27498 | Updated features for Ver. 7.20A.260.095 - Playing Tone Upon Call Connect   |
| 27497 | Ver. 7.20A.260.095   |
| 27491 | Ver. 7.20CO.256.016; SIPREC capacity for Mediant 500/90xx/SE/; registration capacity for Mediant VE/CE                                     |
| 27485 | Document for new LR Version 7.20A.260.xxx (LTS document created for 7.20A.258.xxx)   |

## Documentation Feedback

AudioCodes continually strives to produce high quality documentation. If you have any comments (suggestions or errors) regarding this document, please fill out the Documentation Feedback form on our website at <https://online.audiocodes.com/documentation-feedback>.

**This page is intentionally left blank.**

# 1 Introduction

This document describes the Latest Release (LR) versions for Release 7.2 for AudioCodes' session border controllers (SBC) and media gateways.

**Note:**

- For Long Term Support (LTS) releases of Version 7.2 (7.20A.258.xxx), refer to the [SBC-Gateway Series Release Notes for Long Term Support Versions 7.2](#). For Release Notes of earlier versions of Release 7.2, contact AudioCodes support:
  - ✓ **7.20A.001 to 7.20A.204.012:** *LTRT-27340 SBC-Gateway-MSBR Series Release Notes Ver. 7.2*
  - ✓ **7.20A.204.015 to 7.20A.204.878:** *LTRT-27482 SBC-Gateway Series Release Notes for Long Term Support Versions 7.2*
- Some of the features mentioned in this document are available only if the relevant software License Key has been purchased from AudioCodes and is installed on the device. For a list of available License Keys that can be purchased, please contact your AudioCodes sales representative.
- Open-source software may have been added and/or amended. For further information, contact your AudioCodes sales representative.
- Updates to this document may be made due to significant information discovered after the release or too late in the release cycle to be otherwise included in this release documentation. You can check for an updated version on AudioCodes website at <https://www.audiocodes.com/library/technical-documents>.

## 1.1 Software Revision Record

The following table lists the LR versions for Release 7.2.

**Note:** The latest software versions can be downloaded from AudioCodes' Services Portal (registered Customers only) at <https://services.audiocodes.com>.

**Table 1-1: Software Revision Record of LR Versions**

| LR Software Version          | Released Date    |
|------------------------------|------------------|
| 7.20A.260.286 (7.2.260-3)    | 18 May 2021      |
| 7.20A.260.180 (7.2.260-2)    | 2 February 2021  |
| 7.20CO.258.034               | 29 December 2020 |
| 7.20A.260.110 (7.2.260.1-01) | 22 December 2020 |
| 7.20A.260.109                | 8 December 2020  |
| 7.20A.260.095                | 4 November 2020  |
| 7.20CO.256.016               | 22 October 2020  |
| 7.20A.260.012                | 6 August 2020    |

| LR Software Version | Released Date |
|---------------------|---------------|
| 7.20A.260.007       | 20 July 2020  |
| 7.20A.260.005       | 1 July 2020   |

## 1.2 Supported Products

The following table lists the SBC and Media Gateway products supported in this release.

**Note:**

- Product support and hardware configurations may change without notice. Currently available hardware configurations are listed in AudioCodes Price Book. For further enquiries, please contact your AudioCodes sales representative.
- Figures shown in the tables in this section are maximum values per interface. For available hardware configurations including combinations of supported interfaces, contact your AudioCodes sales representative.

**Table 1-2: SBC and Media Gateway Products Supported in Release 7.2**

| Product                       | Telephony Interfaces |     |       | Ethernet Interfaces | USB | OSN |
|-------------------------------|----------------------|-----|-------|---------------------|-----|-----|
|                               | FXS/FXO              | BRI | E1/T1 |                     |     |     |
| Mediant 500 Gateway & E-SBC   | -                    | -   | 1/1   | 4 GE                | 2   | -   |
| Mediant 500L Gateway & E-SBC  | 4/4                  | 4   | -     | 4 GE                | 1   | -   |
| Mediant 800B Gateway & E-SBC  | 12/12                | 8   | 2     | 4 GE / 8 FE         | 2   | √   |
| Mediant 800C Gateway & E-SBC  | 12/12                | 8   | 4     | 4 GE / 8 FE         | 2   | √   |
| Mediant 1000B Gateway & E-SBC | 24/24                | 20  | 6/8   | 7 GE                | -   | √   |
| MP-1288 Gateways & E-SBC      | 288/0                | -   | -     | 2 GE                | 1   | -   |
| Mediant 2600 E-SBC            | -                    | -   | -     | 8 GE                | -   | -   |
| Mediant 4000 SBC              | -                    | -   | -     | 8 GE                | -   | -   |
| Mediant 4000B SBC             | -                    | -   | -     | 8 GE                | -   | √   |
| Mediant 9030 SBC              | -                    | -   | -     | 12 GE               | -   | -   |
| Mediant 9080 SBC              | -                    | -   | -     | 12 GE               | -   | -   |
| Mediant SE SBC                | -                    | -   | -     | 12 GE               | -   | -   |
| Mediant VE SBC                | -                    | -   | -     | 12 GE               | -   | -   |
| Mediant CE SBC                | -                    | -   | -     | 12 GE               | -   | -   |

## 1.3 Terms Representing Product Groups

Throughout this document, the following terms are used to refer to groups of AudioCodes products for feature applicability. Where applicability is specific to a product, the name of the product is used.

**Table 1-3: Terms Representing Product Groups**

| Term                    | Product   |
|-------------------------|---|
| <i>Analog</i>           | Products with analog interfaces (FXS or FXO): <ul style="list-style-type: none"> <li>▪ MP-1288</li> <li>▪ Mediant 500L Gateway &amp; E-SBC</li> <li>▪ Mediant 800 Gateway &amp; E-SBC (Rev. B and C)</li> <li>▪ Mediant 1000B Gateway &amp; E-SBC</li> </ul>                                    |
| <i>Device</i>           | All products  |
| <i>Digital</i>          | Products with digital PSTN interfaces (ISDN BRI or PRI): <ul style="list-style-type: none"> <li>▪ Mediant 500 Gateway &amp; E-SBC</li> <li>▪ Mediant 500L Gateway &amp; E-SBC</li> <li>▪ Mediant 800 Gateway &amp; E-SBC (Rev. B and C)</li> <li>▪ Mediant 1000B Gateway &amp; E-SBC</li> </ul> |
| <i>Mediant 90xx</i>     | <ul style="list-style-type: none"> <li>▪ Mediant 9000</li> <li>▪ Mediant 9000 Rev. B</li> <li>▪ Mediant 9030</li> <li>▪ Mediant 9080</li> </ul>   |
| <i>Mediant Software</i> | Software-based products: <ul style="list-style-type: none"> <li>▪ Mediant SE SBC</li> <li>▪ Mediant VE SBC</li> <li>▪ Mediant CE SBC</li> </ul>   |

**This page is intentionally left blank.**

## 2 Latest Release (LR) Versions

This chapter describes new features, known constraints and resolved constraints of LR versions for Release 7.2.

### 2.1 Version 7.20

#### 2.1.1 Version 7.20A.260.286

This version includes resolved constraints only.

**Note:** This version is compatible with AudioCodes One Voice Operations Center (OVOC) Version 8.0.114 and EMS/SEM Version 7.2.3113.

##### 2.1.1.1 Resolved Constraints

This section lists constraints from previous releases that have now been resolved.

**Table 2-1: Resolved Constraints in Version 7.20A.260.286**

| Incident  | Description   |
|-----------|---|
| SBC-26664 | The device loses all DTLS resources after about 1,000-1,500 calls.<br><b>Applicable Products:</b> Mediant Software  |
| SBC-27461 | The device fails to use the 'tel:' prefix in the Refer-To SIP header for call transfer requests from VoiceAI Connect. (Resolved by new parameter VAICPreserveTelURI.)<br><b>Relevant Platform:</b> Mediant Software |

## 2.1.2 Version 7.20A.260.180

This version includes new features and resolved constraints only.

**Note:** This version is compatible with AudioCodes One Voice Operations Center (OVOC) Version 7.8.2241 and EMS/SEM Version 7.2.3113.

### 2.1.2.1 New Features

This section describes the new features introduced in this version.

#### 2.1.2.1.1 CDR for SIPREC Calls

SBC CDRs generated by the device can now be customized to include the new field "Is Recorded", which indicates if the SBC leg was recorded (SIPREC) or not.

**Applicable Application:** SBC.

**Applicable Products:** All.

### 2.1.2.2 Resolved Constraints

This section lists constraints from previous releases that have now been resolved.

**Table 2-2: Resolved Constraints in Version 7.20A.260.180**

| Incident              | Description   |
|-----------------------|---|
| SBC-24723             | The SNMP MIB acPMSBCMediaLegsVal returns negative values.<br><b>Applicable Products:</b> All  |
| SBC-26254             | In an HA system, the Redundant device sends the following Syslog messages "HTTPDataPool HMGMT is full. Allocated entries=50" and "restEventMsg::Allocate - Failed allocating buffer".<br><b>Applicable Products:</b> HA |
| SBC-26258 / SBC-26370 | The device runs out of TCP connection resources when FEU=0 (only 160 TCP connections resources instead of 288), causing a registration failure.<br><b>Applicable Products:</b> MP-1288                                  |

## 2.1.3 Version 7.20A.260.110

This version includes resolved constraints only.

**Note:** This version is compatible with AudioCodes One Voice Operations Center (OVOC) Version 7.8.2241 and EMS/SEM Version 7.2.3113.

### 2.1.3.1 Resolved Constraints

This section lists constraints from previous releases that have now been resolved.

**Table 2-3: Resolved Constraints in Version 7.20A.260.110**

| Incident  | Description  |
|-----------|--|
| SBC-24957 | 90% of calls are without voice.<br><b>Applicable Products:</b> All |

## 2.1.4 Version 7.20A.260.109

This version includes resolved constraints only.

**Note:** This version is compatible with AudioCodes One Voice Operations Center (OVOC) Version 7.8.2241 and EMS/SEM Version 7.2.3113.

### 2.1.4.1 Resolved Constraints

This section lists constraints from previous releases that have now been resolved.

**Table 2-4: Resolved Constraints in Version 7.20A.260.109**

| Incident                                | Description  |
|---|--|
| SBC-24679                               | The device rejects incoming SIP UPDATE requests instead of either sending a re-INVITE to the other leg or terminating it. As a result, the call fails.<br><b>Applicable Products:</b> All  |
| SBC-24733 /<br>SBC-24909 /<br>SBC-25083 | The device stops sending Syslog messages.<br><b>Applicable Products:</b> All   |
| SBC-24743                               | When the device's IP Profile parameter 'SBC Session Expires Mode' is configured to <b>Transparent</b> and the device receives a SIP 422 response, it forwards it to the client and doesn't retry the request.<br><b>Applicable Products:</b> All |
| SBC-24804                               | The device experiences a CPU overload when the CPUOverrideHT parameter is enabled.<br><b>Applicable Products:</b> median Software  |
| SBC-24836                               | When the device is installed on Azure, it crashes (resets) with exception reason "CHashMap CIterator".<br><b>Applicable Products:</b> Mediant CE   |
| SBC-24974                               | The device fails to add Source Tags or Destination Tags to the customized CDR upon call failure due to a bad HTTP server response through Call Setup Rule.<br><b>Applicable Products:</b> All  |

## 2.1.5 Version 7.20A.260.095

This version includes new features only.

**Note:** This version is compatible with AudioCodes One Voice Operations Center (OVOC) Version 7.8.1130 and EMS/SEM Version 7.2.3113.

### 2.1.5.1 New Features

This section describes the new features introduced in this version.

#### 2.1.5.1.1 Maximum Supported Characters Increase for SIP Caller ID

The device now supports up to 60 characters for caller ID in SIP messages. Caller ID can be present in the following SIP headers: To, From, Contact, Refer, Referred-By, Refer-To, and Record-Route.

**Applicable Application:** SBC.

**Applicable Products:** All.

#### 2.1.5.1.2 Additional DTMF Handling Method

The device provides a new DTMF handling method. DTMF digits can be received using the SIP INFO message method even if both peers successfully negotiated using the RFC 2833 method. In other words, both SIP INFO and RFC 2833 is used to detect DTMF digits by the device, but the device forwards the DTMF using RFC 2833 only. This may be useful to resolve scenarios where the device negotiates DTMF as RFC 2833, but sends the DTMF as INFO.

The feature is enabled by a new IP Profile parameter, ReceiveMultipleDTMFMethods.

**Applicable Application:** SBC.

**Applicable Products:** All.

#### 2.1.5.1.3 Interval between Auto-Updates Configured in Seconds

The interval that the device waits between each consecutive automatic update that it performs is now configured in seconds (instead of minutes). As a result, the AutoUpdateFrequency parameter (whose units were in minutes) has been replaced by a new parameter, AutoUpdateFrequencySeconds (whose units are in seconds). The value range of this new parameter is 0 (default) to 604,800 seconds.

**Note:** If the device is upgraded to this version, the old parameter is converted to the new one (if the new one was at default). For example, if in the previous load AutoUpdateFrequency=100 (minutes), after a software update, it is converted to AutoUpdateFrequencySeconds = 6000 (seconds).

**Applicable Application:** All.

**Applicable Products:** All.

#### 2.1.5.1.4 SIPREC Call Filtering in CLI

SIPREC calls can now be filtered through the CLI, using the existing `show voip calls` command:

```
show voip calls active siprec
show voip calls active siprec <Session ID>
show voip calls active siprec match <String>
show voip calls history siprec
show voip calls history siprec <Session ID>
show voip calls history siprec match <String>
```

**Applicable Application:** All.

**Applicable Products:** All.

#### 2.1.5.1.5 Playing Tone Upon Call Connect

The device can now be configured to play a specific tone (recorded audio message / announcement) upon call connection (after SIP 200 OK), to the called or calling party. When the tone finishes playing, the call is connected and the call parties can begin talking.

This is configured by using a Message Manipulation rule containing a new variable, `PlayToneOnConnect` (`var.call.src|dst.PlayToneOnConnect`) which defines the tone index in the loaded PRT file to play. The rule is then assigned to the call party (IP Group) to which the device must play the tone.

If the device fails to play the tone (due to, for example, the PRT file is not loaded or the tone index doesn't exist), the device can be configured to connect or disconnect the call. This is configured by a new parameter, 'Play Tone on Connect Failure Behavior', which can be set to **Disconnect** (default) or **Ignore** (i.e., connect call).

**Applicable Application:** SBC.

**Applicable Products:** All.

## 2.1.6 Version 7.20A.260.012

This version includes internal changes only.

**Note:** This version is compatible with AudioCodes One Voice Operations Center (OVOC) Version 7.8.1130 and EMS/SEM Version 7.2.3113.

## 2.1.7 Version 7.20A.260.007

This version includes new features only.

**Note:** This version is compatible with AudioCodes One Voice Operations Center (OVOC) Version 7.8.1130 and EMS/SEM Version 7.2.3113.

### 2.1.7.1 New Features

This section describes the new features introduced in this version.

#### 2.1.7.1.1 Mediant CE Deployment on VMware

Mediant CE can now be deployed in a VMware environment. For capacity, see Section 3.1.

**Applicable Application:** SBC.

**Applicable Products:** Mediant CE.

## 2.1.8 Version 7.20A.260.005

This version includes new features only.

**Note:** This version is compatible with AudioCodes One Voice Operations Center (OVOC) Version 7.8.1119 and EMS/SEM Version 7.2.3113.

### 2.1.8.1 New Features

This section describes the new features introduced in this version.

#### 2.1.8.1.1 CDR Customization for Adding SIP Header Information

The device can add any SIP header data, received in dialog-initiating SIP messages (e.g., INVITE) or non-dialog initiating SIP messages (e.g., SIP 200 OK) to the SBC CDR. This is supported by using variables (Var.Call.Src/Dst.UserDefinedN, where N is 1 to 5) in Message Manipulation rules and SBC CDR customization. The Message Manipulation rule stores the SIP header and its value in the variable, and the CDR is customized to retrieve this stored information from the variable and add it to the CDR.

The 'Field Type' parameter in the SBC CDR Format table provides new optional values to retrieve this stored information from the Message Manipulation variables and add it to the CDR:

- Var Call User Defined 1
- Var Call User Defined 2
- Var Call User Defined 3
- Var Call User Defined 4
- Var Call User Defined 5

Each of the above fields are associated with the stored value of the variable in the Message Manipulation rule.

This feature is applicable to Call Start, Call Connect and Call End CDRs, and all CDR types except Syslog Media.

If a variable is not added or modified in the Message Manipulation rule, and the CDR is customized to include its stored value, the CDR displays an empty string for the value.

**Applicable Application:** All.

**Applicable Products:** All.

#### 2.1.8.1.2 Querying Routing Server or ARM for User Credentials

When the device is configured to authenticate (as a server) incoming SIP dialog message requests (INVITE and REGISTER) from User-type IP Groups, it can now obtain the user's credentials (password) from a third-party routing server or ARM.

When this feature is enabled and the device receives an incoming SIP dialog-initiating request, it sends the new REST API command `getCredentials` in the Get request to the routing server or ARM. The name of the user whose credentials are requested is obtained from the SIP From header when authenticating an INVITE message, or the To header when authenticating a REGISTER message. The routing server or ARM sends a 200 response to the device containing the password (if the requested user exists). The device sends the

challenge back to the user. The user resends the request with an Authorization header (containing a response to the challenge), and the authentication process continues in the usual manner. If the device doesn't receive a password, it rejects the incoming dialog (SIP 404).

This feature is enabled by configuring the existing IP Group's 'SBC Server Authentication Type' parameter to the new optional value **ARM Authentication**. Note that the Routing server or ARM does not authenticate users, but helps the device to process the SIP Digest authentication by providing the user credentials.

Note that the feature is applicable only if the IP Group of the incoming SIP dialog is configured as follows:

- The 'Authentication Mode' parameter is configured to **SBC as Server**.
- The 'Authentication Method List' is configured for INVITE or REGISTER messages.

**Applicable Application:** All.

**Applicable Products:** All.

### 2.1.8.1.3 DTLS Throughput Improvement

Throughput using the Datagram Transport Layer Security (DTLS) protocol to secure UDP-based traffic has been improved. DTLS is also used for WebRTC and therefore, WebRTC session capacity has been consequently increased, as shown in Session Capacity per Feature.

**Applicable Application:** SBC.

**Applicable Products:** Mediant 800; Mediant 2600; Mediant 4000; Mediant 90xx; Mediant Software.

### 2.1.8.1.4 On-Demand SIP-Based Media Recording

The device supports on-demand SIPREC sessions. It can start or stop recording at any stage of the connected call. This is triggered by the receipt of a SIP INFO message containing AudioCodes' X-AC-Action header with the 'start-siprec' parameter for starting recording, or 'stop-siprec' for stopping a recording session.

Below shows an example of a SIP INFO message that triggers a SIPREC session:

```
INFO sip:alice@pc33.example.com SIP/2.0
Via: SIP/2.0/UDP 192.0.2.2:5060;branch=z9hG4bKnabcdef
To: Bob <sip:bob@example.com>;tag=a6c85cf
From: Alice <sip:alice@example.com>;tag=1928301774
Call-Id: a84b4c76e66710@pc33.example.com
CSeq: 314333 INFO
X-AC-Action: start-siprec;recording-ip-group=SRS
Content-Length: 0
```

**Applicable Application:** SBC.

**Applicable Products:** All.

### 2.1.8.1.5 New Hardware Revision for CRMX Module

The CRMX module, which is housed in the Mediant 1000 E-SBC & Gateway, was updated due to one of its components reaching End-Of-Life (EOL) status. The new CRMX module no longer has a WAN port (which was not used and covered by a metal plate).

The new CRMX module is compatible with Software Version 7.20A.260.005 and later.

**Applicable Application:** All.

**Applicable Products:** Mediant 1000.

## 2.2 Version 7.20CO

This version uses OS Version 8 and is available on AWS and Azure.

For upgrading from 7.20A to 7.20CO software version, refer to the following documents:

- **AWS:**
  - Mediant Virtual Edition SBC for AWS Installation Manual Ver. 7.2
  - Mediant Cloud Edition SBC Installation Manual Ver. 7.2
- **Azure:**
  - Mediant Virtual Edition SBC for Microsoft Azure Installation Manual Ver. 7.2
  - Mediant Cloud Edition SBC Installation Manual Ver. 7.2

**Note:** The name of the software version file (.cmp) for devices with OS Version 8 contains the string "CO" (i.e., 7.20CO...). For devices using earlier OS versions, the file name contains the string "A" (i.e., 7.20A...).

### 2.2.1 Version 7.20CO.258.034

This version includes new features only.

**Note:** This version is compatible with AudioCodes One Voice Operations Center (OVOC) Version 7.8.2241 and EMS/SEM Version 7.2.3113.

#### 2.2.1.1 New Features

This section describes the new features introduced in this version.

##### 2.2.1.1.1 Increased Capacity for Mediant VE/CE on AWS

The device provides increased capacity due to the upgrade to OS Version 8. For capacity, see Section 3.1.

**Applicable Application:** SBC.

**Applicable Products:** Mediant VE/CE on AWS.

## 2.2.2 Version 7.20CO.256.016

This version includes new features only.

**Note:** This version is compatible with AudioCodes One Voice Operations Center (OVOC) Version 7.8.2241 and EMS/SEM Version 7.2.3113.

### 2.2.2.1 New Features

This section describes the new features introduced in this version.

#### 2.2.2.1.1 Increased Capacity for Mediant VE/CE on Azure

The device provides increased capacity due to the upgrade to OS Version 8. For capacity, see Section 3.1.

For upgrading from 7.20A to 7.20CO software version, refer to the following documents:

- Mediant Virtual Edition SBC for Microsoft Azure Installation Manual Ver. 7.2
- Mediant Cloud Edition SBC Installation Manual Ver. 7.2

**Applicable Application:** SBC.

**Applicable Products:** Mediant VE/CE on Azure.

## 3 Capacity

This section provides capacity for the Gateway and SBC products.

### 3.1 SIP Signaling and Media Capacity

The following table lists the maximum, concurrent SIP signaling sessions, concurrent media sessions, and registered users per product.

**Table 3-1: SIP Signaling and Media Capacity per Product**

| Product             |                                       | Signaling Capacity |                  | Media Sessions |        |        |  |
|---------------------|---------------------------------------|--------------------|------------------|----------------|--------|--------|--|
|                     |                                       | SIP Sessions       | Registered Users | Session Type   | RTP    | SRTP   | Detailed Media Capabilities                        |
| Mediant 500         |                                       | 250                | 1,500            | Hybrid         | 250    | 200    | Transcoding: n/a                                   |
|                     |                                       |                    |                  | GW-Only        | 30     | 30     | GW: Table 3-4                                      |
| Mediant 500L        |                                       | 60                 | 200              | Hybrid         | 60     | 60     | Transcoding: n/a                                   |
|                     |                                       |                    |                  | GW-Only        | 8      | 8      | GW: Table 3-6                                      |
| Mediant 800A        |                                       | 60                 | 200              | Hybrid         | 60     | 60     | GW & Transcoding: Table 3-8<br>SBC Only: Table 3-7 |

#### Notes:

- The figures listed in the table are accurate at the time of publication of this document. However, these figures may change due to a later software update. For the latest figures, please contact your AudioCodes sales representative.
- "GW" refers to Gateway functionality.
- "SIP Sessions" refers to the maximum concurrent signaling sessions for both SBC and Gateway (when applicable). Whenever signaling sessions is above the maximum media sessions, the rest of the signaling sessions can be used for Direct Media.
- "Session Type" refers to Gateway-only sessions, SBC-only sessions, or Hybrid sessions which is any mixture of SBC and Gateway sessions under the limitations of Gateway-only or SBC-only maximum values.
- "RTP Sessions" refers to the maximum concurrent RTP sessions when all sessions are RTP-RTP (for SBC sessions) or TDM-RTP (for Gateway sessions).
- "SRTP Sessions" refers to the maximum concurrent SRTP sessions when all sessions are RTP-SRTP (for SBC sessions) or TDM-SRTP (for Gateway sessions).
- "Registered Users" refers to the maximum number of users that can be registered with the device. This applies to the supported application (SBC or CRP).
- Regarding signaling, media, and transcoding session resources:
  - ✓ A signaling session is a SIP dialog session between two SIP entities, traversing the SBC and using one signaling session resource.
  - ✓ A media session is an audio (RTP or SRTP), fax (T.38), or video session between two SIP entities, traversing the SBC and using one media session resource.
  - ✓ A gateway session (i.e. TDM-RTP or TDM-SRTP) is also considered as a media session for the calculation of media sessions. In other words, the maximum Media Sessions specified in the table refer to the sum of Gateway and SBC sessions.

- ✓ In case of direct media (i.e., Anti-tromboning / Non-Media Anchoring), where only SIP signaling traverses the SBC and media flows directly between the SIP entities, only a signaling session resource is used. Thus, for products with a greater signaling session capacity than media, even when media session resources have been exhausted, additional signaling sessions can still be handled for direct-media calls.
- ✓ For call sessions requiring transcoding, one transcoding session resource is also used. For example, for a non-direct media call in which one leg uses G.711 and the other leg G.729, one signaling resource, one media session resource, and one transcoding session resource is used.
- Capacity of the Cloud Resilience Package (CRP) application is listed under "Registered Users".
- Capacity of the Lync Analog Device (LAD) application is listed under "Media Sessions".
- **MP-1288:** The maximum number of media and signaling sessions is the summation of the maximum 300 RTP-to-RTP (SBC) sessions and the maximum 288 TDM-RTP (Gateway) sessions. The maximum number of SRTP sessions is the summation of the maximum 150 RTP-to-SRTP (SBC) sessions and the maximum 288 TDM-SRTP (Gateway) sessions.
- Hyper-Threading (HT) is disabled by default on Mediant 9000 with 1G ports only. To enable HT, please refer to the *Mediant 9000 SBC Installation Manual*.
- Media Transcoding Cluster (MTC) feature is not supported by Mediant 9030 SBC.
- **Mediant 90xx SBC and Mediant VE SBC with Media Transcoders limitations:**
  - \* To allow DSP capabilities (such as transcoding), the Performance Profile parameter must be configured to the DSP profile. Each transcoding session is weighted as two RTP-RTP sessions without transcoding. Therefore, the number of sessions without transcoding plus the doubled number of sessions with transcoding must be less than the maximum RTP-RTP figure specified in the table. As result, if all sessions involve transcoding, the maximum number of sessions is half the maximum RTP-RTP sessions without transcoding specified in the table.
  - \*\* The maximum SRTP-RTP sessions is also effected by the above limitations. For example, if sessions involve transcoding, the maximum number of SRTP-RTP sessions is also limited by half of the maximum SRTP-RTP sessions without transcoding.
- **Mediant 9030:** The SRTP Performance Profile is recommended for this product.
- **Mediant VE SBC with vMT-type Media Transcoder:** The host running the vMT virtual machine requires the following configuration:
  - ✓ At least 2.8 GHz CPU with Intel® AVX support
  - ✓ SR-IOV enabled NICs
  - ✓ KVM environment
  - ✓ 8 hyper-threaded vCPUs should be allocated to the vMT virtual machine (4 physical cores)
  - ✓ 4-GB RAM should be allocated to the vMT virtual machine
- **Mediant VE SBC and vMT-type Media Transcoder:** Codec-transcoding functionality is supported only on Intel CPUs with AVX enhancement. In addition, AVX support must be reflected on the vCPU of the SBC virtual machine.
- **Mediant VE SBC with Media Transcoder Cluster** is currently supported only on the OpenStack KVM hypervisor.

- **Mediant VE SBC for VMware:** The recommended profiles are applicable to when Intel Xeon Scalable Processors and Hyper-Threading are used. These profiles provide about the same capacity as the legacy profiles, but with only half of the physical vCPUs as each vCPU refers to a Hyper-Threaded core (logical). For example, a 4-vCPU virtual machine allocates only 2 physical cores. For minimum requirements, see Section 3.3.14.1 on page 65.
- **Mediant CE:** Based on the following instances:
  - ✓ AWS (OS version: 6):
    - Signaling Components (SC): r4.2xlarge
    - Media Components (MC) - forwarding only: r4.large
    - Media Components (MC) - forwarding and transcoding: c4.4xlarge
  - ✓ AWS (OS version: 8):
    - SC: m5.2xlarge
    - MC - forwarding only: m5.large
    - MC - forwarding and transcoding: c5.4xlarge
  - ✓ Azure:
    - SC: DS3\_v2 (up to 50K users) or DS4\_v2 (up to 75K users)
    - MC - forwarding only: DS2\_v2, DS3\_v2 or DS4\_v2
    - MC - forwarding and transcoding: DS2\_v2, DS3\_v2, or DS4\_v2
  - ✓ VMware:
    - SC: 4-vCPU (Hyper-Threaded), 16-GB RAM
    - MC - forwarding and transcoding: 8-vCPU (Hyper-Threaded), 8-GB RAM
- **Mediant SE:** For new deployments, it's highly recommended to use the DL360 G10 server. For exact specifications and BIOS settings, please contact your AudioCodes sales representative.

## 3.2 Session Capacity per Feature

The table below lists capacity per feature, per product.

**Table 3-2: Feature Capacity per Product**

| Product                      | Max. Concurrent WebRTC Sessions (see Note #3) |                   | Max. One-Voice Resiliency (OVR) Users | Max. Concurrent SIPREC Sessions (see Note #4)   | Max. Concurrent MSRP Sessions |
|------------------------------|---|-------------------|---------------------------------------|---|-------------------------------|
|                              | Click-to-Call                                 | Registered Agents |                                       |   |                               |
| MP-1288                      | -   | -                 | -                                     | 150   | 100                           |

| Mediant SE (see Note #1)     | 5,000   | 25,000            | -                                     | 12,000  | 100                           |
| Mediant VE (see Note #2)     | 5,000   | 5,000             | 2,000                                 | 12,000  | 100                           |
| Mediant CE (see Note #2)     | 5,000   | 5,000             | -                                     | 20,000  | 100                           |

**Note:**

1. Using the approved SE server specifications with an Intel Xeon Gold 6126 processor. For the specifications, please contact AudioCodes.
2. The maximum number of WebRTC sessions cannot be higher than the number of SRTP sessions, as indicated in Table 3-1. Therefore, the actual maximum number of concurrent WebRTC sessions per deployment environment will be the lower of these numbers.
3. The capacity figures assume that a TLS key size of 2048-bit is used for the WebSocket and DTLS negotiation,
4. The capacity figures for SIPREC assume that there are no other concurrent, regular (non-SIPREC) voice sessions. SIPREC sessions are counted as part of the SBC session capacity. The maximum number of SIPREC sessions cannot be higher than the number of RTP sessions, as indicated in Table 3-1. Therefore, the actual maximum number of SIPREC sessions per deployment environment will be the lower of these numbers.

### 3.3 Detailed Capacity

This section provides detailed capacity figures.

#### 3.3.1 Mediant 500 E-SBC

The SBC session capacity and DSP channel capacity for Mediant 500 E-SBC are shown in the tables below.

**Table 3-3: Mediant 500 E-SBC (Non-Hybrid) - SBC Capacity**

| Hardware Configuration | TDM-RTP Sessions                |                 |                  |         | Max. SBC Sessions (RTP-RTP) |
|------------------------|---------------------------------|-----------------|------------------|---------|-----------------------------|
|                        | DSP Channels Allocated for PSTN | Wideband Coders |                  |         |                             |
|                        |                                 | G.722           | AMR-WB (G.722.2) | SILK-WB |                             |
| SBC                    | n/a                             | n/a             | n/a              | n/a     | 250                         |

**Table 3-4: Mediant 500 Hybrid E-SBC (with Gateway) - Media & SBC Capacity**

| Hardware Configuration | TDM-RTP Sessions                |                 |                  |         | Max. SBC Sessions (RTP-RTP) |
|------------------------|---------------------------------|-----------------|------------------|---------|-----------------------------|
|                        | DSP Channels Allocated for PSTN | Wideband Coders |                  |         |                             |
|                        |                                 | G.722           | AMR-WB (G.722.2) | SILK-WB |                             |
| 1 x E1/T1              | 30/24                           | √               | -                | -       | 220/226                     |
|                        | 26/24                           | √               | √                | -       | 224/226                     |
|                        | 26/24                           | √               | √                | √       | 224/226                     |

### 3.3.2 Mediant 500L Gateway and E-SBC

The SBC session capacity and DSP channel capacity for Mediant 500L Gateway and E-SBC is shown in the tables below.

**Table 3-5: Mediant 500L E-SBC (Non-Hybrid) - SBC Capacity**

| Hardware Configuration | TDM-RTP Sessions                |                 |                  | Max. SBC Sessions (RTP-RTP) |
|------------------------|---------------------------------|-----------------|------------------|-----------------------------|
|                        | DSP Channels Allocated for PSTN | Wideband Coders |                  |                             |
|                        |                                 | G.722           | AMR-WB (G.722.2) |                             |
| SBC                    | n/a                             | n/a             | n/a              | 60                          |

**Table 3-6: Mediant 500L Hybrid E-SBC (with Gateway) - Media & SBC Capacity**

| Hardware Configuration | DSP Channels Allocated for PSTN | Additional Coders |          |                  |         | Max. SBC Sessions |
|------------------------|---------------------------------|-------------------|----------|------------------|---------|-------------------|
|                        |                                 | Narrowband        | Wideband |                  |         |                   |
|                        |                                 | Opus-NB           | G.722    | AMR-WB (G.722.2) | Opus-WB |                   |
| 2 x BRI /<br>4 x BRI   | 4/8                             | -                 | -        | -                | -       | 56/52             |
|                        | 4/8                             | -                 | √        | -                | -       | 56/52             |
|                        | 4/6                             | √                 | -        | √                | -       | 56/54             |
|                        | 4                               | -                 | -        | -                | √       | 56                |

### 3.3.3 Mediant 800 Gateway & E-SBC

This section describes capacity for Mediant 800 Gateway & E-SBC.

#### 3.3.3.1 Mediant 800A/B Gateway & E-SBC

The DSP channel capacity and SBC session capacity for Mediant 800A/B Gateway & E-SBC are shown in the tables below.

##### 3.3.3.1.1 Non-Hybrid (SBC) Capacity

**Table 3-7: Mediant 800A/B Gateway & E-SBC - SBC Session Capacity per Capabilities (SBC Only)**

| H/W Configuration | DSP Channels for PSTN | SBC Transcoding Sessions                                 |         |                |                  |                |         |              |              | Max. SBC Sessions |              |
|-------------------|-----------------------|--|---------|----------------|------------------|----------------|---------|--------------|--------------|-------------------|--------------|
|                   |                       | From Profile 2 with Additional Advanced DSP Capabilities |         |                |                  |                |         | To Profile 1 | To Profile 2 | Mediant 800A      | Mediant 800B |
|                   |                       | Opus-NB  | Opus-WB | AMR-NB / G.722 | AMR-WB (G.722.2) | SILK-NB / iLBC | SILK-WB |              |              |                   |              |
| SBC               | n/a                   | -  | -       | -              | -                | -              | -       | 57           | 48           | 60                | 250          |
|                   | n/a                   | -  | -       | √              | -                | -              | -       | 51           | 42           | 60                | 250          |
|                   | n/a                   | -  | -       | -              | -                | √              | -       | 39           | 33           | 60                | 250          |
|                   | n/a                   | -  | -       | -              | √                | -              | -       | 36           | 30           | 60                | 250          |
|                   | n/a                   | -  | -       | -              | -                | -              | √       | 27           | 24           | 60                | 250          |
|                   | n/a                   | √  | -       | -              | -                | -              | -       | 27           | 24           | 60                | 250          |
|                   | n/a                   | -  | √       | -              | -                | -              | -       | 21           | 21           | 60                | 250          |

**Note:** "Max. SBC Sessions" for Mediant 800B applies to scenarios without registered users. When registered users are used, "Max. SBC Sessions" is reduced according to the main capacity table (see Section 3.1).

### 3.3.3.1.2 Hybrid (with Gateway) Capacity

**Table 3-8: Mediant 800A/B Gateway & E-SBC - Channel Capacity per Capabilities (with Gateway)**

| Telephony<br>Interface<br>Assembly | DSP<br>Channel<br>s<br>Allocate<br>d for<br>PSTN | SBC Transcoding Sessions                                 |                     |         |         |         |         |         |                    |                    | Conf. Participants | Max. SBC Sessions |                 |
|------------------------------------|--|--|---------------------|---------|---------|---------|---------|---------|--------------------|--------------------|--------------------|-------------------|-----------------|

**Notes:**

- "Max. SBC Sessions" for Mediant 800B applies to scenarios without registered users. When registered users are used, "Max. SBC Sessions" is reduced according to the main capacity table (see Section 3.1).
- *Profile 1*: G.711 at 20ms only, with In-band signaling (in voice channel) and Silence Suppression (no fax detection or T.38 support).
- *Profile 2*: G.711, G.726, G.729 (A / AB), and G.723.1, T.38 with fax detection, In-band signaling (in voice channel), and Silence Compression.
- All hardware assemblies also support the following DSP channel capabilities: echo cancellation (EC), CID (caller ID), RTCP XR reporting, and SRTP.
- SBC enhancements (e.g. Acoustic Echo Suppressor, Noise Reduction) are also available for these configurations. For more information, please contact your AudioCodes sales representative.
- Automatic Gain Control (AGC) and Answer Detector / Answer Machine Detector (AD/AMD) are also available for these configurations. For more information, please contact your AudioCodes sales representative.
- V.150.1 is supported only for the US Department of Defense (DoD).
- *Transcoding Sessions* represents part of the total SBC sessions.
- *Conference Participants* represents the number of concurrent analog ports in a three-way conference call.
- For availability of the telephony assemblies listed in the table above, please contact your AudioCodes sales representative.

### 3.3.3.2 Mediant 800C Gateway & E-SBC

The DSP channel capacity and SBC session capacity for Mediant 800C Gateway & E-SBC are shown in the tables below.

#### 3.3.3.2.1 Non-Hybrid (SBC) Capacity

**Table 3-9: Mediant 800C Gateway & E-SBC - SBC Session Capacity per Capabilities (SBC Only)**

| H/W Configuration | SBC Transcoding Sessions                                 |         |                |                  |                |         |              |              | Max. SBC Sessions |
|-------------------|--|---------|----------------|------------------|----------------|---------|--------------|--------------|-------------------|

**Notes:**

- "Max. SBC Sessions" applies to scenarios without registered users. When registered users are used, "Max. SBC Sessions" is reduced according to the main capacity table (see Section 3.1).
- *Profile 1*: G.711 at 20ms only, with In-band signaling (in voice channel) and Silence Suppression (no fax detection or T.38 support).
- *Profile 2*: G.711, G.726, G.729 (A / AB), and G.723.1, T.38 with fax detection, In-band signaling (in voice channel), and Silence Compression.
- All hardware assemblies also support the following DSP channel capabilities: echo cancellation (EC), CID (caller ID), RTCP XR reporting, and SRTP.
- SBC enhancements (e.g. Acoustic Echo Suppressor, Noise Reduction) are also available for these configurations. For more information, please contact your AudioCodes sales representative.
- Automatic Gain Control (AGC) and Answer Detector / Answer Machine Detector (AD/AMD) are also available for these configurations. For more information, please contact your AudioCodes sales representative.
- V.150.1 is supported only for the US Department of Defense (DoD).
- *Transcoding Sessions* represents part of the total SBC sessions.
- *Conference Participants* represents the number of concurrent analog ports in a three-way conference call.
- For availability of the telephony assemblies listed in the table above, please contact your AudioCodes sales representative.

### 3.3.4 Mediant 1000B Gateway & E-SBC

This section lists the channel capacity and DSP templates for Mediant 1000B Gateway & E-SBC DSP.

**Notes:**

- The maximum number of channels on any form of analog, digital, and MPM module assembly is 192. When the device handles both SBC and Gateway call sessions, the maximum number of total sessions is 150. When the device handles SRTP, the maximum capacity is reduced to 120.
- Installation and use of voice coders is subject to obtaining the appropriate license and royalty payments.
- For additional DSP templates, contact your AudioCodes sales representative.

#### 3.3.4.1 Analog (FXS/FXO) Interfaces

The channel capacity per DSP firmware template for analog interfaces is shown in the table below.

**Table 3-11: Mediant 1000B Analog Series - Channel Capacity per DSP Firmware Template**

|                    | DSP Template       |                        |
|--------------------|--------------------|------------------------|
|                    | 0, 1, 2, 4, 5, 6   | 10, 11, 12, 14, 15, 16 |
|                    | Number of Channels |                        |
|                    | 4                  | 3                      |
| Voice Coder        |                    |                        |
| G.711 A/Mu-law PCM | √                  | √                      |
| G.726 ADPCM        | √                  | √                      |
| G.723.1            | √                  | √                      |
| G.729 (A / AB)     | √                  | √                      |
| G.722              | -                  | √                      |

### 3.3.4.2 BRI Interfaces

The channel capacity per DSP firmware template for BRI interfaces is shown in the table below.

**Table 3-12: Mediant 1000B BRI Series - Channel Capacity per DSP Firmware Template**

|                    |                     |    |    |                        |    |    |
|--------------------|---------------------|----|----|------------------------|----|----|
|                    | DSP Template        |    |    |                        |    |    |
|                    | 0, 1, 2, 4, 5, 6    |    |    | 10, 11, 12, 14, 15, 16 |    |    |
|                    | Number of BRI Spans |    |    |                        |    |    |
|                    | 4                   | 8  | 20 | 4                      | 8  | 20 |
|                    | Number of Channels  |    |    |                        |    |    |
|                    | 8                   | 16 | 40 | 6                      | 12 | 30 |
| Voice Coder        |                     |    |    |                        |    |    |
| G.711 A/Mu-law PCM | √                   |    |    | √                      |    |    |
| G.726 ADPCM        | √                   |    |    | √                      |    |    |
| G.723.1            | √                   |    |    | √                      |    |    |
| G.729 (A / AB)     | √                   |    |    | √                      |    |    |
| G.722              | -                   |    |    | √                      |    |    |

### 3.3.4.3 E1/T1 Interfaces

The channel capacity per DSP firmware template for E1/T1 interfaces is shown in the table below.

**Table 3-13: Mediant 1000B E1/T1 Series - Channel Capacity per DSP Firmware Templates**

|                               | DSP Template       |    |     |     |     |         |    |    |     |     |         |    |    |    |     |         |    |    |    |     |         |    |     |     |     |

**Note:** "IPM Features" refers to Automatic Gain Control (AGC), Answer Machine Detection (AMD) and Answer Detection (AD).

### 3.3.4.4 Media Processing Interfaces

The transcoding session capacity according to DSP firmware template (per MPM module) is shown in the table below.

**Notes:**

- The device can be housed with up to four MPM modules.
- The MPM modules can only be housed in slots 1 through 5.

**Table 3-14: Transcoding Sessions Capacity per MPM According to DSP Firmware Template for Mediant 1000B**

|  | DSP Template                                  |         |         |         |         |

### 3.3.5 MP-1288 Analog Gateway & E-SBC

Session capacity includes Gateway sessions as well as SBC sessions without transcoding capabilities. The maximum capacity of Gateway sessions for MP-1288 Gateway & E-SBC is shown in the table below.

**Table 3-15: MP-1288 Gateway - Session Capacity**

| Coder   | Gateway Sessions Capacity |                                  |
|---|---------------------------|----------------------------------|
|   | Single FXS Blade          | Fully Populated (4 x FXS Blades) |
| Basic: G.711, G.729 (A / AB),<br>G.723.1, G.726 / G.727 ADPCM | 72                        | 288                              |
| G.722   | 72                        | 288                              |
| AMR-NB  | 72                        | 288                              |
| Opus-NB   | 60                        | 240                              |

**Note:**

- Quality Monitoring and Noise Reduction are not supported.
- SRTP is supported on all configurations.

### 3.3.6 Mediant 2600 E-SBC

The maximum number of supported SBC sessions is shown in Section 3.1 on page 27. These SBC sessions also support SRTP and RTCP XR. When DSP capabilities are required, the number of sessions that can use DSP capabilities is reduced, as shown in the table below:

**Table 3-16: Mediant 2600 E-SBC - Transcoding Capacity per Coder Capability Profile**

| Session Coders     |                              | Max. Sessions |           |
|--------------------|------------------------------|---------------|-----------|
| From Coder Profile | To Coder Profile             | Without MPM4  | With MPM4 |
| Profile 1          | Profile 1                    | 400           | 600       |
| Profile 2          | Profile 1                    | 300           | 600       |
| Profile 2          | Profile 2                    | 250           | 600       |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 275           | 600       |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 225           | 600       |
| Profile 1          | Profile 2 + iLBC             | 175           | 575       |
| Profile 2          | Profile 2 + iLBC             | 150           | 500       |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 200           | 600       |
| Profile 2          | Profile 2 + AMR-WB (G.722.2) | 175           | 525       |
| Profile 1          | Profile 2 + SILK-NB          | 200           | 600       |
| Profile 2          | Profile 2 + SILK-NB          | 175           | 525       |
| Profile 1          | Profile 2 + SILK-WB          | 100           | 350       |
| Profile 2          | Profile 2 + SILK-WB          | 100           | 350       |
| Profile 1          | Profile 2 + Opus-NB          | 125           | 425       |
| Profile 2          | Profile 2 + Opus-NB          | 125           | 375       |
| Profile 1          | Profile 2 + Opus-WB          | 100           | 300       |
| Profile 2          | Profile 2 + Opus-WB          | 75            | 275       |

**Notes:**

- *Profile 1:* G.711 at 20ms only, with in-band signaling (in voice channel), DTMF transcoding (RFC 2833 to in-band signaling), and Silence Suppression (no fax detection or T.38 support).
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38 with fax detection, in-band signaling (in voice channel), and Silence Compression.
- Acoustic Echo Suppressor reduces performance. For more information, contact your AudioCodes sales representative.
- MPM is the optional, Media Processing Module that provides additional DSPs, allowing greater capacity.

### 3.3.7 Mediant 4000 SBC

The maximum number of supported SBC sessions is listed in Section 3.1 on page 27. These SBC sessions also support SRTP and RTCP XR. When DSP capabilities are required, the number of sessions that can use DSP capabilities is reduced, as shown in the table below.

**Table 3-17: Mediant 4000 SBC - Transcoding Capacity per Coder Capability Profile**

| Session Coders     |                              | Max. Sessions |           |
|--------------------|------------------------------|---------------|-----------|
| From Coder Profile | To Coder Profile             | Without MPM8  | With MPM8 |
| Profile 1          | Profile 1                    | 800           | 2,400     |
| Profile 2          | Profile 1                    | 600           | 1,850     |
| Profile 2          | Profile 2                    | 500           | 1,550     |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 550           | 1,650     |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 450           | 1,350     |
| Profile 1          | Profile 2 + iLBC             | 350           | 1,150     |
| Profile 2          | Profile 2 + iLBC             | 300           | 1,000     |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 400           | 1,200     |
| Profile 2          | Profile 2 + AMR-WB (G.722.2) | 350           | 1,050     |
| Profile 1          | Profile 2 + SILK-NB          | 400           | 1,200     |
| Profile 2          | Profile 2 + SILK-NB          | 350           | 1,050     |
| Profile 1          | Profile 2 + SILK-WB          | 200           | 700       |
| Profile 2          | Profile 2 + SILK-WB          | 200           | 700       |
| Profile 1          | Profile 2 + Opus-NB          | 250           | 850       |
| Profile 2          | Profile 2 + Opus-NB          | 250           | 750       |
| Profile 1          | Profile 2 + Opus-WB          | 200           | 600       |
| Profile 2          | Profile 2 + Opus-WB          | 150           | 550       |

**Notes:**

- *Profile 1:* G.711 at 20ms only, with in-band signaling (in voice channel), DTMF transcoding (RFC 2833 to in-band signaling), and Silence Suppression (no fax detection or T.38 support).
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38 with fax detection, in-band signaling (in voice channel), and Silence Compression.
- Acoustic Echo Suppressor reduces performance. For more information, contact your AudioCodes sales representative.
- MPM is the optional, Media Processing Module that provides additional DSPs, allowing greater capacity.

### 3.3.7.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-18: Mediant 4000 SBC - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |
|-----------------------|---------------|
| Fax Detection         | 5,000         |
| AD/AMD/Beep Detection | 5,000         |
| CP Detection          | 5,000         |
| Jitter Buffer         | 5,000         |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.8 Mediant 4000B SBC

The maximum number of supported SBC sessions is listed in Section 3.1 on page 27. These SBC sessions also support SRTP and RTCP XR. When DSP capabilities are required, the number of sessions that can use DSP capabilities is reduced, as shown in the table below.

**Table 3-19: Mediant 4000B SBC - Transcoding Capacity per Coder Capability Profile**

| Session Coders     |                              | Max. Sessions |           |            |            |            |
|--------------------|------------------------------|---------------|-----------|------------|------------|------------|
| From Coder Profile | To Coder Profile             | Without MPM   | 1 x MPM8B | 1 x MPM12B | 2 x MPM12B | 3 x MPM12B |
| Profile 1          | Profile 1                    | 800           | 2,400     | 3,250      | 5,000      | 5,000      |
| Profile 2          | Profile 1                    | 600           | 1,850     | 2,450      | 4,350      | 5,000      |
| Profile 2          | Profile 2                    | 500           | 1,550     | 2,100      | 3,650      | 5,000      |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 550           | 1,650     | 2,200      | 3,850      | 5,000      |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 450           | 1,350     | 1,800      | 3,150      | 4,550      |
| Profile 1          | Profile 2 + iLBC             | 400           | 1,200     | 1,600      | 2,850      | 4,050      |
| Profile 2          | Profile 2 + iLBC             | 350           | 1,050     | 1,400      | 2,500      | 3,600      |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 400           | 1,200     | 1,600      | 2,850      | 4,050      |

| Profile 1          | Profile 2 + Opus-WB | 200           | 600       | 850        | 1,500      | 2,150      |
| Profile 2          | Profile 2 + Opus-WB | 150           | 550       | 750        | 1,300      | 1,900      |

**Notes:**

- *Profile 1:* G.711 at 20ms only, with In-band signaling (in voice channel), DTMF transcoding (RFC 2833 to in-band signaling), and Silence Suppression (no fax detection or T.38 support).
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, AMR-NB, T.38 with fax detection, In-band signaling (in voice channel), and Silence Compression.
- Acoustic Echo Suppressor reduces performance by about 30%. For more information, contact your AudioCodes sales representative.
- MPMB is the optional, Media Processing Module that provides additional DSPs, allowing greater capacity.

### 3.3.8.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-20: Mediant 4000B SBC - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |
|-----------------------|---------------|
| Fax Detection         | 5,000         |
| AD/AMD/Beep Detection | 5,000         |
| CP Detection          | 5,000         |
| Jitter Buffer         | 5,000         |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.9 Mediant 9000 SBC

The maximum number of supported SBC sessions is listed in Section 3.1 on page 27. These SBC sessions also support SRTP and RTCP XR. When DSP capabilities are required, the number of sessions that can use DSP capabilities is reduced, as shown in the table below.

**Table 3-21: Mediant 9000 SBC - Transcoding Capacity per Coder Capability Profile**

| Session Coders     |                              | Max. Sessions           |          |                      |          |
|--------------------|------------------------------|-------------------------|----------|----------------------|----------|
| From Coder Profile | To Coder Profile             | Without Hyper-Threading |          | With Hyper-Threading |          |
|                    |                              | Basic                   | Extended | Basic                | Extended |

| Profile 2          | Profile 1                    | 1,500                   | 1,325    | 2,125                | 1,700    |
| Profile 2          | Profile 2                    | 1,000                   | 900      | 1,275                | 1,100    |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 1,500                   | 1,300    | 2,075                | 1,625    |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 1,000                   | 900      | 1,225                | 1,050    |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 500                     | 475      | 600                  | 575      |
| Profile 2          | Profile 2 + AMR-WB           | 425                     | 400      | 500                  | 475      |
| Profile 1          | Profile 2 + SILK-NB          | 1,300                   | 1,175    | 1,700                | 1,450    |
| Profile 2          | Profile 2 + SILK-NB          | 900                     | 825      | 1,100                | 975      |
| Profile 1          | Profile 2 + SILK-WB          | 775                     | 750      | 1,000                | 950      |
| Profile 2          | Profile 2 + SILK-WB          | 625                     | 600      | 750                  | 725      |
| Profile 1          | Profile 2 + Opus-NB          | 825                     | 750      | 1,050                | 900      |
| Profile 2          | Profile 2 + Opus-NB          | 650                     | 600      | 775                  | 700      |
| Profile 1          | Profile 2 + Opus-WB          | 625                     | 575      | 800                  | 700      |
| Profile 2          | Profile 2 + Opus-WB          | 525                     | 475      | 625                  | 575      |

**Notes:**

- *Profile 1:* G.711 at 20ms only, without T.38 support.
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic:* Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended:* Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.9.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-22: Mediant 9000 SBC - Forwarding Capacity per Feature**

| Feature               | Max. Sessions           |                      |
|-----------------------|-------------------------|----------------------|
|                       | Without Hyper-Threading | With Hyper-Threading |
| Fax Detection         | 24,000                  | 40,000               |
| AD/AMD/Beep Detection | 24,000                  | 39,000               |
| CP Detection          | 24,000                  | 44,000               |
| Jitter Buffer         | 2,225                   | 5,000                |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.10 Mediant 9000 Rev. B / 9080 SBC

The maximum number of supported SBC sessions is listed in Section 3.1 on page 27. These SBC sessions also support SRTP and RTCP XR. When DSP capabilities are required, the number of sessions that can use DSP capabilities is reduced, as shown in the table below.

**Table 3-23: Mediant 9000 Rev. B / 9080 - Transcoding Capacity per Coder Capability Profile**

| Session Coders     |                              | Max. Sessions |          |
|--------------------|------------------------------|---------------|----------|
| From Coder Profile | To Coder Profile             |               |          |
|                    |                              | Basic         | Extended |
| Profile 1          | Profile 1                    | 9,600         | 6,625    |
| Profile 2          | Profile 1                    | 4,400         | 3,625    |
| Profile 2          | Profile 2                    | 2,875         | 2,500    |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 2,925         | 2,600    |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 2,150         | 1,950    |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 950           | 925      |
| Profile 2          | Profile 2 + AMR-WB           | 850           | 825      |
| Profile 1          | Profile 2 + SILK-NB          | 2,750         | 2,500    |
| Profile 2          | Profile 2 + SILK-NB          | 2,050         | 1,900    |
| Profile 1          | Profile 2 + SILK-WB          | 1,575         | 1,475    |
| Profile 2          | Profile 2 + SILK-WB          | 1,300         | 1,250    |
| Profile 1          | Profile 2 + Opus-NB          | 1,700         | 1,450    |
| Profile 2          | Profile 2 + Opus-NB          | 1,375         | 1,200    |
| Profile 1          | Profile 2 + Opus-WB          | 1,375         | 1,200    |
| Profile 2          | Profile 2 + Opus-WB          | 1,175         | 1,025    |

**Notes:**

- *Profile 1:* G.711 at 20ms only, without T.38 support.
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic:* Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended:* Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.10.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-24: Mediant 9000 Rev. B / 9080 SBC - Forwarding Capacity per Feature**

| Feature                     | Max. Sessions |
|-----------------------------|---------------|
| Fax Detection               | 45,000        |
| AD, AMD, and Beep Detection | 45,000        |
| CP Detection                | 45,000        |
| Jitter Buffer               | 6,000         |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.11 Mediant 9000 / 9000 Rev. B / 9080 SBC with Media Transcoders

Mediant 9000, Mediant 9000 Rev. B, or Mediant 9080 SBC with Media Transcoders allows increasing the number of transcoding sessions by using Media Transcoders.

The maximum number of transcoding sessions depends on the following:

- Number of Media Transcoders in the media transcoding cluster. (The cluster can have up to eight Media Transcoders.)
- Cluster operation mode (Best-Effort or Full-HA mode).
- Maximum transcoding sessions. Each transcoding session is weighted as two RTP-RTP sessions without transcoding. Therefore, the number of sessions without transcoding plus the doubled number of sessions with transcoding must be less than the maximum RTP-RTP value specified in the table. As a result, if all sessions are with transcoding, the maximum number of sessions is half the maximum RTP-RTP sessions without transcoding as specified in Table 3-1.

The following table lists maximum transcoding sessions capacity of a single Media Transcoder.

**Table 3-25: Single Media Transcoder (MT) - Transcoding Capacity per Profile**

| Session Coders     |                  | Max. Sessions |            |            |
|--------------------|------------------|---------------|------------|------------|
| From Coder Profile | To Coder Profile | 1 x MPM12B    | 2 x MPM12B | 3 x MPM12B |
| Profile 1          | Profile 1        | 2,875         | 5,000      | 5,000      |
| Profile 2          | Profile 1        | 2,300         | 4,025      | 5,000      |

| Session Coders     |                              | Max. Sessions |            |            |
|--------------------|------------------------------|---------------|------------|------------|
| From Coder Profile | To Coder Profile             | 1 x MPM12B    | 2 x MPM12B | 3 x MPM12B |
| Profile 2          | Profile 2                    | 1,800         | 3,175      | 4,550      |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 2,000         | 3,525      | 5,000      |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 1,625         | 2,850      | 4,075      |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 1,425         | 2,500      | 3,600      |
| Profile 2          | Profile 2 + AMR-WB (G.722.2) | 1,225         | 2,175      | 3,100      |
| Profile 1          | Profile 2 + SILK-NB          | 1,425         | 2,500      | 3,600      |
| Profile 2          | Profile 2 + SILK-NB          | 1,225         | 2,175      | 3,100      |
| Profile 1          | Profile 2 + SILK-WB          | 850           | 1,500      | 2,150      |
| Profile 2          | Profile 2 + SILK-WB          | 850           | 1,500      | 2,150      |
| Profile 1          | Profile 2 + Opus-NB          | 1,050         | 1,825      | 2,625      |
| Profile 2          | Profile 2 + Opus-NB          | 950           | 1,675      | 2,400      |
| Profile 1          | Profile 2 + Opus-WB          | 750           | 1,325      | 1,900      |
| Profile 2          | Profile 2 + Opus-WB          | 650           | 1,175      | 1,675      |

**Notes:**

- *Profile 1:* G.711 at 20ms only, with In-band signaling (in voice channel) and Silence Suppression (no fax detection or T.38 support).
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, AMR-NB, T.38 with fax detection, In-band signaling (in voice channel), and Silence Compression.
- Acoustic Echo Suppressor reduces performance by about 30%. For more information, contact your AudioCodes sales representative.
- MPM12B is a Media Processing Module in the Media Transcoder that provides additional DSPs, allowing higher capacity.
- For best cluster efficiency, all Media Transcoders in the Cluster should populate the same number of MPM12Bs.
- The SBC employs load balancing of transcoding sessions among all Media Transcoders in the Cluster. Each Media Transcoder can handle up to 200 calls (transcoded sessions) per second (CPS).

### 3.3.12 Mediant 9030 SBC

The maximum number of supported SBC sessions is listed in Section 3.1 on page 27. These SBC sessions also support SRTP and RTCP XR. When DSP capabilities are required, the number of sessions that can use DSP capabilities is reduced, as shown in the table below.

**Table 3-26: Mediant 9030 SBC - Transcoding Capacity per Coder Capability Profile**

| Session Coders     |                              | Max. Sessions |          |
|--------------------|------------------------------|---------------|----------|
| From Coder Profile | To Coder Profile             | Basic         | Extended |
| Profile 1          | Profile 1                    | 4,025         | 2,775    |
| Profile 2          | Profile 1                    | 1,825         | 1,525    |
| Profile 2          | Profile 2                    | 1,200         | 1,050    |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 1,200         | 1,075    |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 875           | 825      |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 400           | 375      |
| Profile 2          | Profile 2 + AMR-WB           | 350           | 350      |
| Profile 1          | Profile 2 + SILK-NB          | 1,150         | 1,050    |
| Profile 2          | Profile 2 + SILK-NB          | 850           | 775      |
| Profile 1          | Profile 2 + SILK-WB          | 650           | 625      |
| Profile 2          | Profile 2 + SILK-WB          | 525           | 525      |
| Profile 1          | Profile 2 + Opus-NB          | 700           | 600      |
| Profile 2          | Profile 2 + Opus-NB          | 575           | 500      |
| Profile 1          | Profile 2 + Opus-WB          | 575           | 500      |
| Profile 2          | Profile 2 + Opus-WB          | 475           | 425      |

**Notes:**

- *Profile 1*: G.711 at 20ms only, without T.38 support.
- *Profile 2*: G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic*: Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended*: Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.12.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-27: Mediant 9030 SBC - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |
|-----------------------|---------------|
| Fax Detection         | 23,000        |
| AD/AMD/Beep Detection | 23,000        |
| CP Detection          | 23,000        |
| Jitter Buffer         | 3,000         |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.13 Mediant Cloud Edition (CE) SBC

The Media Components (MC) in the media cluster of the Mediant CE must all be of the same instance type: either forwarding-only, or forwarding and transcoding. A maximum of 21 MCs can be used.

#### 3.3.13.1 Mediant CE SBC for AWS EC2 using OS Version: 6

##### 3.3.13.1.1 Forwarding Sessions

The number of concurrent forwarding sessions per MC is shown in the following table.

**Table 3-28: Forwarding Capacity per MC Instance Type**

| MC Instance Type | Max. Forwarding Sessions |
|------------------|--------------------------|
| r4.large         | 3,200                    |
| c4.4xlarge       | 3,200                    |

**Note:** Forwarding performance was tested in AWS Ireland Region.

##### 3.3.13.1.2 Transcoding Sessions

For transcoding capabilities, the Media Component (MC) must be of the AWS instance type c4.4xlarge. The number of supported transcoding sessions per MC is shown in the following table.

**Table 3-29: Transcoding Capacity per c4.4xlarge MC**

| Session Coders     |                              | Max. Sessions |          |
|--------------------|------------------------------|---------------|----------|
| From Coder Profile | To Coder Profile             | Basic         | Extended |
| Profile 1          | Profile 1                    | 3,200         | 2,425    |
| Profile 2          | Profile 1                    | 1,325         | 1,050    |
| Profile 2          | Profile 2                    | 800           | 675      |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 1,300         | 1,000    |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 750           | 650      |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 375           | 350      |
| Profile 2          | Profile 2 + AMR-WB           | 300           | 275      |
| Profile 1          | Profile 2 + SILK-NB          | 1,050         | 900      |
| Profile 2          | Profile 2 + SILK-NB          | 675           | 600      |
| Profile 1          | Profile 2 + SILK-WB          | 625           | 575      |
| Profile 2          | Profile 2 + SILK-WB          | 450           | 450      |
| Profile 1          | Profile 2 + Opus-NB          | 650           | 550      |

| Session Coders     |                     | Max. Sessions |          |
|--------------------|---------------------|---------------|----------|
| From Coder Profile | To Coder Profile    | Basic         | Extended |
| Profile 2          | Profile 2 + Opus-NB | 475           | 425      |
| Profile 1          | Profile 2 + Opus-WB | 500           | 425      |
| Profile 2          | Profile 2 + Opus-WB | 375           | 350      |

**Notes:**

- *Profile 1:* G.711 at 20ms only, without T.38 support.
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic:* Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended:* Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.13.2 Mediant CE SBC for AWS EC2 using OS Version: 8

#### 3.3.13.2.1 Forwarding Sessions

The number of concurrent forwarding sessions per MC is shown in the following table.

**Table 3-30: Forwarding Capacity per MC Instance Type**

| MC Instance Type | Max. Forwarding Sessions |
|------------------|--------------------------|
| m5.large         | 6,000                    |
| c5.4xlarge       | 4,000                    |

**Note:** Forwarding performance was tested in AWS Ireland Region.

### 3.3.13.2 Transcoding Sessions

For transcoding capabilities, the Media Component (MC) must be of the AWS instance type c5.4xlarge. The number of supported transcoding sessions per MC is shown in the following table.

**Table 3-31: Transcoding Capacity per c5.4xlarge MC**

| Session Coders     |                              | Max. Sessions |          |
|--------------------|------------------------------|---------------|----------|
| From Coder Profile | To Coder Profile             | Basic         | Extended |
| Profile 1          | Profile 1                    | 4000          | 2825     |
| Profile 2          | Profile 1                    | 2375          | 1900     |
| Profile 2          | Profile 2                    | 1625          | 1425     |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 1500          | 1300     |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 1150          | 1050     |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 475           | 475      |
| Profile 2          | Profile 2 + AMR-WB           | 425           | 425      |
| Profile 1          | Profile 2 + SILK-NB          | 1400          | 1250     |
| Profile 2          | Profile 2 + SILK-NB          | 1100          | 1025     |
| Profile 1          | Profile 2 + SILK-WB          | 775           | 750      |
| Profile 2          | Profile 2 + SILK-WB          | 675           | 675      |
| Profile 1          | Profile 2 + Opus-NB          | 850           | 725      |
| Profile 2          | Profile 2 + Opus-NB          | 725           | 650      |
| Profile 1          | Profile 2 + Opus-WB          | 700           | 600      |
| Profile 2          | Profile 2 + Opus-WB          | 625           | 550      |

#### Notes:

- *Profile 1*: G.711 at 20ms only, without T.38 support.
- *Profile 2*: G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic*: Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended*: Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.13.3 Mediant CE SBC for Azure using OS Version: 6

#### 3.3.13.3.1 Forwarding Sessions

The number of concurrent forwarding sessions per Media Component (MC) is shown in the following table.

**Table 3-32: Forwarding Capacity per MC**

| MC VM Size | Max. Forwarding Sessions |
|------------|--------------------------|
| DS3_v2     | 475                      |

#### 3.3.13.3.2 Transcoding Sessions

For transcoding capabilities, the Media Component (MC) must be of the Azure DS3\_v2 virtual machine size. The number of supported transcoding sessions per MC is shown in the following table.

**Table 3-33: Transcoding Capacity per DS3\_v2 MC**

| Session Coders     |                              | Max. Sessions |          |
|--------------------|------------------------------|---------------|----------|
| From Coder Profile | To Coder Profile             | Basic         | Extended |
| Profile 1          | Profile 1                    | 475           | 475      |
| Profile 2          | Profile 1                    | 350           | 275      |
| Profile 2          | Profile 2                    | 225           | 175      |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 400           | 325      |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 250           | 200      |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 125           | 100      |
| Profile 2          | Profile 2 + AMR-WB           | 100           | 75       |
| Profile 1          | Profile 2 + SILK-NB          | 300           | 275      |
| Profile 2          | Profile 2 + SILK-NB          | 200           | 175      |
| Profile 1          | Profile 2 + SILK-WB          | 175           | 150      |
| Profile 2          | Profile 2 + SILK-WB          | 125           | 125      |
| Profile 1          | Profile 2 + Opus-NB          | 200           | 150      |
| Profile 2          | Profile 2 + Opus-NB          | 125           | 125      |
| Profile 1          | Profile 2 + Opus-WB          | 150           | 125      |
| Profile 2          | Profile 2 + Opus-WB          | 100           | 100      |

### 3.3.13.4 Mediant CE SBC for Azure using OS Version: 8

#### 3.3.13.4.1 Forwarding Sessions

The number of concurrent forwarding sessions per Media Component (MC) is shown in the following table.

**Table 3-34: Forwarding Capacity per MC**

| MC VM Size | Max. Forwarding Sessions |
|------------|--------------------------|
| DS2_v2     | 1200                     |
| DS3_v2     | 1700                     |
| DS4_v2     | 1800                     |

#### 3.3.13.4.2 Transcoding Sessions

For transcoding capabilities, the Media Component (MC) must be of the Azure DS2\_v2 / DS3\_v2 / DS4\_v2 virtual machine size. The number of supported transcoding sessions per MC is shown in the following table.

**Table 3-35: Transcoding Capacity per MC**

| Session Coders           |                              | DS2_v2 |          | DS3_v2 |          | DS4_v2 |          |
|--------------------------|------------------------------|--------|----------|--------|----------|--------|----------|
| From<br>Coder<br>Profile | To Coder Profile             | Basic  | Extended | Basic  | Extended | Basic  | Extended |
| Profile 1                | Profile 1                    | 175    | 175      | 575    | 575      | 1,175  | 1,175    |
| Profile 2                | Profile 1                    | 100    | 100      | 325    | 300      | 675    | 600      |
| Profile 2                | Profile 2                    | 75     | 50       | 225    | 200      | 450    | 400      |
| Profile 1                | Profile 2 + AMR-NB / G.722   | 100    | 100      | 325    | 300      | 675    | 600      |
| Profile 2                | Profile 2 + AMR-NB / G.722   | 75     | 50       | 225    | 200      | 450    | 400      |
| Profile 1                | Profile 2 + AMR-WB (G.722.2) | 25     | 25       | 100    | 100      | 225    | 200      |
| Profile 2                | Profile 2 + AMR-WB           | 25     | 25       | 75     | 75       | 175    | 175      |
| Profile 1                | Profile 2 + SILK-NB          | 100    | 75       | 300    | 250      | 600    | 525      |
| Profile 2                | Profile 2 + SILK-NB          | 50     | 50       | 200    | 175      | 400    | 375      |
| Profile 1                | Profile 2 + SILK-WB          | 50     | 50       | 175    | 150      | 350    | 325      |
| Profile 2                | Profile 2 + SILK-WB          | 25     | 25       | 125    | 125      | 275    | 275      |
| Profile 1                | Profile 2 + Opus-NB          | 50     | 50       | 175    | 175      | 375    | 350      |
| Profile 2                | Profile 2 + Opus-NB          | 25     | 25       | 125    | 125      | 275    | 275      |
| Profile 1                | Profile 2 + Opus-WB          | 25     | 25       | 125    | 125      | 275    | 250      |
| Profile 2                | Profile 2 + Opus-WB          | 25     | 25       | 100    | 100      | 225    | 225      |

### 3.3.13.5 Mediant CE SBC for VMware

The following tables list maximum transcoding capacity for Mediant CE SBC running on VMware hypervisor with Hyper-Threading.

Each vCPU refers to a Hyper-Threaded core (logical). For example, a 4-vCPU virtual machine allocates only 2 physical cores.

**Note:**

- The recommended profiles require the following minimum requirements:
  - ✓ Intel Xeon Scalable Processors or later. The capacity listed in the following table refers to 3.3 GHz all-core Turbo speed. When using different all-core Turbo speed, the capacity is increased or decreased accordingly.
  - ✓ Hyper-Threading enabled on host.
  - ✓ VMware ESXi 6.5 or later.
  - ✓ CPUOverrideHT ini file parameter is configured to 1.
- CPU Affinity is recommended. For more information, refer to the *Installation Manual*.
- For transcoding capabilities, the 'Media Component Profile' parameter on all Media Components must be configured to **Transcoding Enabled** (MCPProfile = 1).

**Table 3-36: Mediant CE SBC on VMware with Hyper-Threading - Transcoding Capacity**

| Session Coders     |                            | Max. Sessions<br>8 vCPU 8-GB RAM |          |
|--------------------|----------------------------|----------------------------------|----------|
| From Coder Profile | To Coder Profile           | Basic                            | Extended |
| Profile 1          | Profile 1                  | 1,800                            | 1,175    |
| Profile 1          | Profile 2                  | 975                              | 775      |
| Profile 2          | Profile 2                  | 675                              | 575      |
| Profile 1          | Profile 2 + SILK-NB        | 575                              | 525      |

| Profile 2          | Profile 2 + Opus-WB        | 250                              | 225      |

### 3.3.14 Mediant Virtual Edition (VE) SBC

The maximum number of supported SBC sessions is listed in Section 3.1 on page 27. These SBC sessions also support SRTP and RTCP XR. When DSP capabilities are required (DSP Performance Profile), the number of sessions that can use DSP capabilities is reduced, as shown in the tables in this section.

#### 3.3.14.1 Mediant VE SBC for VMware Hypervisors with Hyper-Threading

The following tables list maximum transcoding capacity for Mediant VE SBC running on VMware hypervisor with Hyper-Threading.

Each vCPU refers to a Hyper-Threaded core (logical). For example, a 4-vCPU virtual machine allocates only 2 physical cores.

**Note:**

- The recommended profiles require the following minimum requirements:
  - ✓ Intel Xeon Scalable Processors or later. The capacity listed in the table below refer to 3.3 GHz all-core Turbo speed. When using different all-core Turbo speed, the capacity is increased or decreased accordingly.
  - ✓ Hyper-Threading enabled on host
  - ✓ VMware ESXi 6.5 or later
  - ✓ CPUOverrideHT ini file parameter is configured to 1
- CPU Affinity is recommended. For more information, refer to the *Installation Manual*.
- For transcoding capabilities, the 'SBC Performance Profile' (SBCPerformanceProfile) parameter must be configured to Optimized for Transcoding (2).

**Table 3-37: Mediant VE SBC on VMware with Hyper-Threading - Transcoding Capacity**

| Session Coders     |                            | Max. Sessions   |          |                  |          |                   |          |
|--------------------|----------------------------|-----------------|----------|------------------|----------|-------------------|----------|
|                    |                            | 4 vCPU 8-GB RAM |          | 8 vCPU 16-GB RAM |          | 16 vCPU 16-GB RAM |          |

| Profile 1          | Profile 2 + Opus-WB | 150             | 125      | 200              | 175      | 625               | 525      |
| Profile 2          | Profile 2 + Opus-WB | 125             | 100      | 175              | 150      | 550               | 475      |

### 3.3.14.2 Mediant VE SBC for OpenStack and VMware Hypervisors

The following tables list maximum channel capacity for Mediant VE SBC 2.8 GHz running on OpenStack or VMware hypervisors.

#### 3.3.14.2.1 Two-vCPU Mediant VE SBC

The following table lists maximum channel capacity for the 2-vCPU (1 vCPU reserved for DSP) Mediant VE SBC.

**Table 3-38: 2-vCPU Mediant VE SBC on OpenStack/VMware - Transcoding Capacity**

| Session Coders     |                              | Max. Sessions |          |
|--------------------|------------------------------|---------------|----------|
| From Coder Profile | To Coder Profile             | Basic         | Extended |
| Profile 1          | Profile 1                    | 300           | 250      |
| Profile 2          | Profile 1                    | 150           | 125      |
| Profile 2          | Profile 2                    | 100           | 75       |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 150           | 125      |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 100           | 75       |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 50            | 25       |
| Profile 2          | Profile 2 + AMR-WB (G.722.2) | 25            | 25       |
| Profile 1          | Profile 2 + SILK-NB          | 125           | 100      |
| Profile 2          | Profile 2 + SILK-NB          | 75            | 75       |
| Profile 1          | Profile 2 + SILK-WB          | 75            | 75       |
| Profile 2          | Profile 2 + SILK-WB          | 50            | 50       |
| Profile 1          | Profile 2 + Opus-NB          | 75            | 75       |
| Profile 2          | Profile 2 + Opus-NB          | 50            | 50       |
| Profile 1          | Profile 2 + Opus-WB          | 50            | 50       |
| Profile 2          | Profile 2 + Opus-WB          | 50            | 25       |

**Notes:**

- *Profile 1:* G.711 at 20ms only, without T.38 support.
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic:* Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended:* Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.14.2.1.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-39: 2-vCPU Mediant VE SBC on OpenStack/VMware - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |
|-----------------------|---------------|
| Fax Detection         | 2,400         |
| AD/AMD/Beep Detection | 2,400         |
| CP Detection          | 2,400         |
| Jitter Buffer         | 200           |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.14.2.2 Four-vCPU Mediant VE SBC

The following table lists maximum channel capacity for the 4-vCPU (3 vCPUs reserved for DSP) Mediant VE SBC.

**Table 3-40: 4-vCPU Mediant VE SBC on OpenStack/VMware - Transcoding Capacity**

| Session Coders     |                            | Max. Sessions |          |
|--------------------|----------------------------|---------------|----------|
| From Coder Profile | To Coder Profile           | Basic         | Extended |
| Profile 1          | Profile 1                  | 900           | 750      |
| Profile 2          | Profile 1                  | 450           | 375      |
| Profile 2          | Profile 2                  | 300           | 250      |
| Profile 1          | Profile 2 + AMR-NB / G.722 | 450           | 375      |
| Profile 2          | Profile 2 + AMR-NB / G.722 | 300           | 250      |
| Profile 1          | Profile 2 + AMR-WB         | 150           | 125      |
| Profile 2          | Profile 2 + AMR-WB         | 125           | 100      |
| Profile 1          | Profile 2 + SILK-NB        | 375           | 350      |
| Profile 2          | Profile 2 + SILK-NB        | 250           | 225      |
| Profile 1          | Profile 2 + SILK-WB        | 225           | 225      |
| Profile 2          | Profile 2 + SILK-WB        | 175           | 175      |
| Profile 1          | Profile 2 + Opus-NB        | 250           | 225      |
| Profile 2          | Profile 2 + Opus-NB        | 175           | 175      |
| Profile 1          | Profile 2 + Opus-WB        | 175           | 175      |
| Profile 2          | Profile 2 + Opus-WB        | 150           | 125      |

**Notes:**

- *Profile 1*: G.711 at 20ms only, without T.38 support.
- *Profile 2*: G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic*: Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended*: Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.14.2.2.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-41: 4-vCPU Mediant VE SBC on OpenStack/VMware - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |
|-----------------------|---------------|
| Fax Detection         | 7,200         |
| AD/AMD/Beep Detection | 7,200         |
| CP Detection          | 7,200         |
| Jitter Buffer         | 650           |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.14.2.3 Eight-vCPU Mediant VE SBC

The following table lists maximum channel capacity for the 8-vCPU (4 vCPUs reserved for DSP) Mediant VE SBC.

**Table 3-42: 8-vCPU Mediant VE SBC on OpenStack/VMware - Transcoding Capacity**

| Session Coders     |                            | Max. Sessions |          |
|--------------------|----------------------------|---------------|----------|
| From Coder Profile | To Coder Profile           | Basic         | Extended |
| Profile 1          | Profile 1                  | 1,200         | 1,000    |
| Profile 2          | Profile 1                  | 600           | 525      |
| Profile 2          | Profile 2                  | 400           | 350      |
| Profile 1          | Profile 2 + AMR-NB / G.722 | 600           | 525      |
| Profile 2          | Profile 2 + AMR-NB / G.722 | 400           | 350      |
| Profile 1          | Profile 2 + AMR-WB         | 200           | 175      |
| Profile 2          | Profile 2 + AMR-WB         | 150           | 150      |
| Profile 1          | Profile 2 + SILK-NB        | 500           | 475      |
| Profile 2          | Profile 2 + SILK-NB        | 350           | 325      |
| Profile 1          | Profile 2 + SILK-WB        | 300           | 300      |
| Profile 2          | Profile 2 + SILK-WB        | 250           | 225      |

| Session Coders     |                     | Max. Sessions |          |
|--------------------|---------------------|---------------|----------|
| From Coder Profile | To Coder Profile    | Basic         | Extended |
| Profile 1          | Profile 2 + Opus-NB | 325           | 300      |
| Profile 2          | Profile 2 + Opus-NB | 250           | 225      |
| Profile 1          | Profile 2 + Opus-WB | 250           | 225      |
| Profile 2          | Profile 2 + Opus-WB | 200           | 175      |

**Notes:**

- *Profile 1:* G.711 at 20ms only, without T.38 support.
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic:* Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended:* Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.14.2.3.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-43: 8-vCPU Mediant VE SBC on OpenStack/VMware - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |
|-----------------------|---------------|
| Fax Detection         | 9,600         |
| AD/AMD/Beep Detection | 9,600         |
| CP Detection          | 9,600         |
| Jitter Buffer         | 875           |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.14.3 Mediant VE SBC for Amazon AWS EC2 using OS Version: 6

The following tables list maximum channel capacity for Mediant VE SBC on the Amazon EC2 platform.

**Table 3-44: Mediant VE SBC on c4.2xlarge - Transcoding Capacity**

| Session Coders     |                            | Max. Sessions |          |
|--------------------|----------------------------|---------------|----------|
| From Coder Profile | To Coder Profile           | Basic         | Extended |
| Profile 1          | Profile 1                  | 1,524         | 1,164    |
| Profile 2          | Profile 1                  | 750           | 618      |
| Profile 2          | Profile 2                  | 498           | 420      |
| Profile 1          | Profile 2 + AMR-NB / G.722 | 570           | 492      |
| Profile 2          | Profile 2 + AMR-NB / G.722 | 408           | 354      |
| Profile 1          | Profile 2 + AMR-WB         | 180           | 174      |
| Profile 2          | Profile 2 + AMR-WB         | 162           | 156      |

| Profile 2          | Profile 2 + AMR-NB / G.722 | 2,175         | 1,875    |
| Profile 1          | Profile 2 + AMR-WB         | 950           | 925      |
| Profile 2          | Profile 2 + AMR-WB         | 850           | 825      |
| Profile 1          | Profile 2 + SILK-NB        | 2,575         | 2,325    |
| Profile 2          | Profile 2 + SILK-NB        | 1,950         | 1,725    |

| Session Coders     |                     | Max. Sessions |          |
|--------------------|---------------------|---------------|----------|
| From Coder Profile | To Coder Profile    | Basic         | Extended |
| Profile 1          | Profile 2 + SILK-WB | 1,525         | 1,425    |
| Profile 2          | Profile 2 + SILK-WB | 1,275         | 1,175    |
| Profile 1          | Profile 2 + Opus-NB | 1,650         | 1,450    |
| Profile 2          | Profile 2 + Opus-NB | 1,375         | 1,200    |
| Profile 1          | Profile 2 + Opus-WB | 1,200         | 1,150    |
| Profile 2          | Profile 2 + Opus-WB | 1,050         | 975      |

**Notes:**

- *Profile 1:* G.711 at 20ms only, without T.38 support.
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic:* Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended:* Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.14.3.1.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-46: Mediant VE SBC on Amazon EC2 - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |            |
|-----------------------|---------------|------------|
|                       | c4.2xlarge    | c4.8xlarge |
| Fax Detection         | 2,000         | 3,200      |
| AD/AMD/Beep Detection | 2,000         | 3,200      |
| CP Detection          | 2,000         | 3,200      |
| Jitter Buffer         | 650           | 3,200      |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.14.4 Mediant VE SBC for Amazon AWS EC2 using OS Version: 8

The following tables list maximum channel capacity for Mediant VE SBC on the Amazon EC2 platform.

**Table 3-47: Mediant VE SBC on c5.2xlarge - Transcoding Capacity**

| Session Coders     |                            | Max. Sessions |          |
|--------------------|----------------------------|---------------|----------|
| From Coder Profile | To Coder Profile           | Basic         | Extended |
| Profile 1          | Profile 1                  | 1950          | 1275     |
| Profile 2          | Profile 1                  | 1050          | 850      |
| Profile 2          | Profile 2                  | 725           | 625      |
| Profile 1          | Profile 2 + AMR-NB / G.722 | 625           | 550      |
| Profile 2          | Profile 2 + AMR-NB / G.722 | 500           | 450      |
| Profile 1          | Profile 2 + AMR-WB         | 200           | 200      |
| Profile 2          | Profile 2 + AMR-WB         | 175           | 175      |
| Profile 1          | Profile 2 + SILK-NB        | 625           | 550      |

| Profile 1          | Profile 2 + Opus-WB | 1725          | 1470     |
| Profile 2          | Profile 2 + Opus-WB | 1500          | 1340     |

**Notes:**

- *Profile 1:* G.711 at 20ms only, without T.38 support.
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic:* Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended:* Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.14.4.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-49: Mediant VE SBC on Amazon EC2 - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |            |
|-----------------------|---------------|------------|
|                       | c5.2xlarge    | c5.9xlarge |
| Fax Detection         | 5,500         | 7,000      |
| AD/AMD/Beep Detection | 5,500         | 7,000      |
| CP Detection          | 5,500         | 7,000      |
| Jitter Buffer         | 1,800         | 7,000      |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.14.5 Mediant VE SBC for Azure (OS Version: 6)

The following tables list maximum channel capacity for Mediant VE SBC on the Azure platform.

**Table 3-50: Mediant VE SBC on DS1\_v2, DS2\_v2 & DS3\_v2 - Transcoding Capacity**

| Session Coders     |                              | Max. Sessions     |          |        |          |
|--------------------|------------------------------|-------------------|----------|--------|----------|
|                    |                              | DS1_v2 and DS2_v2 |          | DS3_v2 |          |
| From Coder Profile | To Coder Profile             | Basic             | Extended | Basic  | Extended |
| Profile 1          | Profile 1                    | 275               | 200      | 600    | 600      |
| Profile 2          | Profile 1                    | 125               | 75       | 350    | 275      |
| Profile 2          | Profile 2                    | 75                | 50       | 225    | 175      |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 125               | 100      | 400    | 325      |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 75                | 50       | 250    | 200      |

### 3.3.14.7 Mediant VE SBC for Hyper-V Hypervisor

The following tables lists maximum channel capacity for Mediant VE SBC 2.1 GHz running on Hyper-V hypervisor.

#### 3.3.14.7.1 Two-vCPU Mediant VE SBC

The following table lists maximum channel capacity for the 2-vCPU (1 vCPU reserved for DSP) Mediant VE SBC.

**Table 3-52: 2-vCPU Mediant VE SBC on Hyper-V - Transcoding Capacity**

| Session Coders     |                            | Max. Sessions |          |
|--------------------|----------------------------|---------------|----------|
| From Coder Profile | To Coder Profile           | Basic         | Extended |
| Profile 1          | Profile 1                  | 225           | 175      |
| Profile 2          | Profile 1                  | 100           | 100      |
| Profile 2          | Profile 2                  | 75            | 50       |
| Profile 1          | Profile 2 + AMR-NB / G.722 | 100           | 75       |
| Profile 2          | Profile 2 + AMR-NB / G.722 | 75            | 50       |
| Profile 1          | Profile 2 + AMR-WB         | 25            | 25       |
| Profile 2          | Profile 2 + AMR-WB         | 25            | 25       |
| Profile 1          | Profile 2 + SILK-NB        | 75            | 75       |
| Profile 2          | Profile 2 + SILK-NB        | 50            | 50       |
| Profile 1          | Profile 2 + SILK-WB        | 50            | 50       |
| Profile 2          | Profile 2 + SILK-WB        | 25            | 25       |
| Profile 1          | Profile 2 + Opus-NB        | 50            | 50       |
| Profile 2          | Profile 2 + Opus-NB        | 25            | 25       |
| Profile 1          | Profile 2 + Opus-WB        | 25            | 25       |
| Profile 2          | Profile 2 + Opus-WB        | 25            | 25       |

**Notes:**

- *Profile 1:* G.711 at 20ms only, without T.38 support.
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic:* Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended:* Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.14.7.1.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-53: 2-vCPU Mediant VE SBC on Hyper-V - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |
|-----------------------|---------------|
| Fax Detection         | 1,800         |
| AD/AMD/Beep Detection | 1,800         |
| CP Detection          | 1,800         |
| Jitter Buffer         | 150           |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.14.7.2 Four-vCPU Mediant VE SBC

The following table lists maximum channel capacity for the 4-vCPU (3 vCPUs reserved for DSP) Mediant VE SBC.

**Table 3-54: 4-vCPU Mediant VE SBC on Hyper-V - Transcoding Capacity**

| Session Coders     |                            | Max. Sessions |          |
|--------------------|----------------------------|---------------|----------|
| From Coder Profile | To Coder Profile           | Basic         | Extended |
| Profile 1          | Profile 1                  | 600           | 550      |
| Profile 2          | Profile 1                  | 325           | 300      |
| Profile 2          | Profile 2                  | 225           | 200      |
| Profile 1          | Profile 2 + AMR-NB / G.722 | 325           | 275      |
| Profile 2          | Profile 2 + AMR-NB / G.722 | 225           | 200      |
| Profile 1          | Profile 2 + AMR-WB         | 100           | 100      |
| Profile 2          | Profile 2 + AMR-WB         | 75            | 75       |
| Profile 1          | Profile 2 + SILK-NB        | 275           | 250      |
| Profile 2          | Profile 2 + SILK-NB        | 200           | 175      |
| Profile 1          | Profile 2 + SILK-WB        | 175           | 150      |
| Profile 2          | Profile 2 + SILK-WB        | 125           | 125      |

| Session Coders     |                     | Max. Sessions |          |
|--------------------|---------------------|---------------|----------|
| From Coder Profile | To Coder Profile    | Basic         | Extended |
| Profile 1          | Profile 2 + Opus-NB | 175           | 150      |
| Profile 2          | Profile 2 + Opus-NB | 125           | 125      |
| Profile 1          | Profile 2 + Opus-WB | 125           | 125      |
| Profile 2          | Profile 2 + Opus-WB | 100           | 100      |

**Notes:**

- *Profile 1:* G.711 at 20ms only, without T.38 support.
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic:* Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended:* Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.14.7.2.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-55: 4-vCPU Mediant VE SBC on Hyper-V - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |
|-----------------------|---------------|
| Fax Detection         | 5,400         |
| AD/AMD/Beep Detection | 5,400         |
| CP Detection          | 5,400         |
| Jitter Buffer         | 500           |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

### 3.3.14.8 Mediant VE SBC with Media Transcoders

Mediant VE SBC with Virtual Media Transcoders allows increasing the number of transcoding sessions by using Media Transcoders. The maximum number of transcoding sessions depends on the following:

- The number of Media Transcoders in the media transcoding cluster.
- The cluster operation mode (Best-Effort or Full-HA mode).
- The maximum transcoding sessions that the Mediant VE SBC can perform. Each transcoding session is weighted as two RTP-RTP sessions without transcoding. Therefore, the number of sessions without transcoding plus the doubled number of sessions with transcoding must be less than the maximum RTP-RTP value specified in the table. As a result, if all sessions are with transcoding, the maximum number of sessions is half the maximum RTP-RTP sessions without transcoding as specified in Table 3-1.

The following table lists maximum transcoding session capacity of a single MT-type Media Transcoder:

**Table 3-56: Mediant VE SBC with Single MT - Transcoding Capacity per Profile**

| Session Coders     |                              | Max. Sessions |            |            |
|--------------------|------------------------------|---------------|------------|------------|
| From Coder Profile | To Coder Profile             | 1 x MPM12B    | 2 x MPM12B | 3 x MPM12B |
| Profile 1          | Profile 1                    | 2,875         | 5,000      | 5,000      |
| Profile 2          | Profile 1                    | 2,300         | 4,025      | 5,000      |
| Profile 2          | Profile 2                    | 1,800         | 3,175      | 4,550      |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 2,000         | 3,525      | 5,000      |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 1,625         | 2,850      | 4,075      |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 1,425         | 2,500      | 3,600      |
| Profile 2          | Profile 2 + AMR-WB (G.722.2) | 1,225         | 2,175      | 3,100      |
| Profile 1          | Profile 2 + SILK-NB          | 1,425         | 2,500      | 3,600      |
| Profile 2          | Profile 2 + SILK-NB          | 1,225         | 2,175      | 3,100      |
| Profile 1          | Profile 2 + SILK-WB          | 850           | 1,500      | 2,150      |
| Profile 2          | Profile 2 + SILK-WB          | 850           | 1,500      | 2,150      |
| Profile 1          | Profile 2 + Opus-NB          | 1,050         | 1,825      | 2,625      |
| Profile 2          | Profile 2 + Opus-NB          | 950           | 1,675      | 2,400      |
| Profile 1          | Profile 2 + Opus-WB          | 750           | 1325       | 1900       |
| Profile 2          | Profile 2 + Opus-WB          | 650           | 1175       | 1675       |

The following table lists maximum transcoding session capacity of a single vMT-type Media Transcoder:

**Table 3-57: Single vMT - Transcoding Capacity per Profile**

| Session Coders     |                            | Max. Sessions |          |
|--------------------|----------------------------|---------------|----------|
| From Coder Profile | To Coder Profile           | Basic         | Extended |
| Profile 1          | Profile 1                  | 1,600         | 1,225    |
| Profile 2          | Profile 1                  | 775           | 650      |
| Profile 2          | Profile 2                  | 525           | 425      |
| Profile 1          | Profile 2 + AMR-NB / G.722 | 575           | 500      |
| Profile 2          | Profile 2 + AMR-NB / G.722 | 425           | 350      |
| Profile 1          | Profile 2 + AMR-WB         | 175           | 175      |
| Profile 2          | Profile 2 + AMR-WB         | 150           | 150      |
| Profile 1          | Profile 2 + SILK-NB        | 500           | 450      |
| Profile 2          | Profile 2 + SILK-NB        | 375           | 325      |
| Profile 1          | Profile 2 + SILK-WB        | 300           | 275      |
| Profile 2          | Profile 2 + SILK-WB        | 250           | 225      |
| Profile 1          | Profile 2 + Opus-NB        | 300           | 275      |
| Profile 2          | Profile 2 + Opus-NB        | 250           | 225      |
| Profile 1          | Profile 2 + Opus-WB        | 225           | 200      |
| Profile 2          | Profile 2 + Opus-WB        | 200           | 175      |

### 3.3.15 Mediant Server Edition (SE) SBC

**Note:** Digital signal processing (DSP) is supported only on Mediant SE SBC based on DL360 G10.

The maximum number of supported SBC sessions is listed in Section 3.1 on page 27. These SBC sessions also support SRTP and RTCP XR. When DSP capabilities are required, the number of sessions that can use DSP capabilities is reduced, as shown in the table below.

**Table 3-58: Mediant SE SBC (DL360 G10) - Transcoding Capacity per Coder Capability Profile**

| Session Coders     |                              | Max. Sessions |          |
|--------------------|------------------------------|---------------|----------|
| From Coder Profile | To Coder Profile             | Basic         | Extended |
| Profile 1          | Profile 1                    | 9,600         | 6,625    |
| Profile 2          | Profile 1                    | 4,400         | 3,625    |
| Profile 2          | Profile 2                    | 2,875         | 2,500    |
| Profile 1          | Profile 2 + AMR-NB / G.722   | 2,925         | 2,600    |
| Profile 2          | Profile 2 + AMR-NB / G.722   | 2,150         | 1,950    |
| Profile 1          | Profile 2 + AMR-WB (G.722.2) | 950           | 925      |
| Profile 2          | Profile 2 + AMR-WB           | 850           | 825      |
| Profile 1          | Profile 2 + SILK-NB          | 2,750         | 2,500    |
| Profile 2          | Profile 2 + SILK-NB          | 2,050         | 1,900    |
| Profile 1          | Profile 2 + SILK-WB          | 1,575         | 1,475    |
| Profile 2          | Profile 2 + SILK-WB          | 1,300         | 1,250    |
| Profile 1          | Profile 2 + Opus-NB          | 1,700         | 1,450    |
| Profile 2          | Profile 2 + Opus-NB          | 1,375         | 1,200    |
| Profile 1          | Profile 2 + Opus-WB          | 1,375         | 1,200    |
| Profile 2          | Profile 2 + Opus-WB          | 1,175         | 1,025    |

**Notes:**

- *Profile 1:* G.711 at 20ms only, without T.38 support.
- *Profile 2:* G.711, G.726, G.729 (A / AB), G.723.1, T.38.
- *Basic:* Excludes in-band signaling (in voice channel), VAD, Silence Suppression and fax detection.
- *Extended:* Includes DTMF transcoding (RFC 2833 to in-band signaling), VAD, Silence Suppression and fax detection
- Acoustic Echo Suppressor may reduce capacity. For more information, contact your AudioCodes sales representative.

### 3.3.15.1 Forwarding Session Capacity per Feature without Transcoding

The table below lists the maximum number of concurrent forwarding sessions per feature without using transcoding.

**Table 3-59: Mediant SE SBC (DL360 G10) - Forwarding Capacity per Feature**

| Feature               | Max. Sessions |
|-----------------------|---------------|
| Fax Detection         | 45,000        |
| AD/AMD/Beep Detection | 45,000        |
| CP Detection          | 45,000        |
| Jitter Buffer         | 6,000         |

**Notes:**

- All figures were calculated for call duration of 100 seconds.
- For fax detection, figures are based on the following assumptions:
  - ✓ Timeout for fax detection is 10 seconds (default)
  - ✓ Fax detection is required on both legs of the call
- Figures for Call Progress (CP), AD, AMD, and Beep detection assume that detection is only on one leg of the call (if not, figures will be reduced).

## 3.4 Capacity per Configuration Table

The maximum rows (indices) that can be configured per configuration table is listed in the table below.

**Table 3-60: Capacity per Configuration Table**

| Configuration Table                                       | MP-1288 / Mediant 500 / 500L / 800 / 1000B | Mediant 2600 / 4000B | Mediant 90xx / SE  | Mediant VE / CE  |
|---|--|----------------------|--------------------|--|
| Access List   | 50   | 50                   | 50                 | 50   |
| Accounts  | 102  | 625                  | 1,500              | 1,500  |
| Additional Management Interfaces                          | 16   | 64                   | 64                 | 64   |
| Allowed Audio Coders Groups                               | 10   | 20                   | 20                 | 20   |
| Allowed Video Coders Groups                               | 4  | 4                    | 4                  | 4  |
| Alternative Routing Reasons                               | 20   | 20                   | 20                 | 20   |
| Bandwidth Profile   | 486  | 1,009                | 1,884              | 1,884  |
| Call Admission Control Profile                            | 102  | 625                  | 1,500              | 1,500  |
| Call Admission Control Rule (per Profile)                 | 8  | 8                    | 8                  | 8  |
| Call Setup Rules  | 64   | 64                   | 64                 | 64   |
| Calling Name Manipulation for IP-to-Tel Calls             | 120  | n/a (Gateway only)   | n/a (Gateway only) | n/a (Gateway only)   |
| Calling Name Manipulation for Tel-to-IP Calls             | 120  | n/a (Gateway only)   | n/a (Gateway only) | n/a (Gateway only)   |
| Char Conversion   | 40   | n/a (Gateway only)   | n/a (Gateway only) | n/a (Gateway only)   |
| Charge Codes  | 25   | n/a (Gateway only)   | n/a (Gateway only) | n/a (Gateway only)   |
| Classification  | 102  | 625                  | 1,500              | <ul style="list-style-type: none"> <li>2 GB: 750</li> <li>3.5-64 GB: 1,500</li> </ul>            |

## 4 Supported SIP Standards

This section lists SIP RFCs and standards supported by the device.

### 4.1 Supported SIP RFCs

The table below lists the supported RFCs.

**Table 4-1: Supported RFCs**

| RFC                                   | Description  | Gateway | SBC                         |
|---------------------------------------|--|---------|-----------------------------|
| draft-choudhuri-sip-info-digit-00     | SIP INFO method for DTMF digit transport and collection                                    | √       | √                           |
| draft-ietf-bfcpbis-rfc4583bis-12      | Session Description Protocol (SDP) Format for Binary Floor Control Protocol (BFCP) Streams | ×       | √ (forwarded transparently) |
| draft-ietf-sip-connect-reuse-06       | Connection Reuse in SIP  | √       | √                           |
| draft-ietf-sipping-cc-transfer-05     | Call Transfer  | √       | √                           |
| draft-ietf-sipping-realtimefax-01     | SIP Support for Real-time Fax: Call Flow Examples  | √       | √ (forwarded transparently) |
| draft-ietf-sip-privacy-04.txt         | SIP Extensions for Network-Asserted Caller Identity using Remote-Party-ID header           | √       | √                           |
| draft-johnston-sipping-cc-uui-04      | Transporting User to User Information for Call Centers using SIP                           | √       | √ (forwarded transparently) |
| draft-levy-sip-diversion-08           | Diversion Indication in SIP  | √       | √                           |
| draft-mahy-iptel-cpc-06               | The Calling Party's Category tel URI Parameter   | √       | √ (forwarded transparently) |
| draft-mahy-sipping-signaled-digits-01 | Signaled Telephony Events in the Session Initiation Protocol                               | √       | √                           |
| draft-sandbakken-dispatch-bfcp-udp-03 | Revision of the Binary Floor Control Protocol (BFCP) for use over an unreliable transport  | ×       | √ (forwarded transparently) |
| ECMA-355, ISO/IEC 22535               | QSIG tunneling   | √       | √ (forwarded transparently) |
| RFC 2327                              | SDP  | √       | √                           |
| RFC 2617                              | HTTP Authentication: Basic and Digest Access Authentication                                | √       | √                           |
| RFC 2782                              | A DNS RR for specifying the location of services   | √       | √                           |
| RFC 2833                              | Telephone event  | √       | √                           |
| RFC 2976                              | SIP INFO Method  | √       | √                           |
| RFC 3261                              | SIP  | √       | √                           |

| RFC      | Description   | Gateway | SBC                           |
|----------|---|---------|-------------------------------|
| RFC 3262 | Reliability of Provisional Responses  | √       | √                             |
| RFC 3263 | Locating SIP Servers  | √       | √                             |
| RFC 3264 | Offer/Answer Model  | √       | √                             |
| RFC 3265 | (SIP)-Specific Event Notification   | √       | √                             |
| RFC 3310 | Hypertext Transfer Protocol (HTTP) Digest Authentication Using Authentication and Key Agreement (AKA) | √       | ×                             |
| RFC 3311 | UPDATE Method   | √       | √                             |
| RFC 3323 | Privacy Mechanism   | √       | √                             |
| RFC 3325 | Private Extensions to the SIP for Asserted Identity within Trusted Networks                           | √       | √                             |
| RFC 3326 | Reason header   | √       | √ (forwarded transparently)   |
| RFC 3327 | Extension Header Field for Registering Non-Adjacent Contacts  | √       | ×                             |
| RFC 3361 | DHCP Option for SIP Servers   | √       | ×                             |
| RFC 3362 | Real-time Facsimile (T.38) - image/t38 MIME Sub-type Registration                                     | √       | √                             |
| RFC 3372 | SIP-T   | √       | √ (forwarded transparently)   |
| RFC 3389 | RTP Payload for Comfort Noise   | √       | √ (forwarded transparently)   |
| RFC 3420 | Internet Media Type message/sipfrag   | √       | √                             |
| RFC 3455 | P-Associated-URI  | √       | √ (using user info \ account) |
| RFC 3489 | STUN - Simple Traversal of UDP  | √       | √                             |
| RFC 3515 | Refer Method  | √       | √                             |
| RFC 3550 | RTP: A Transport Protocol for Real-Time Applications  | √       | √                             |
| RFC 3578 | Interworking of ISDN overlap signalling to SIP  | √       | ×                             |
| RFC 3581 | Symmetric Response Routing - rport  | √       | √                             |
| RFC 3605 | RTCP attribute in SDP   | √       | √ (forwarded transparently)   |
| RFC 3608 | SIP Extension Header Field for Service Route Discovery During Registration                            | √       | ×                             |
| RFC 3611 | RTCP-XR   | √       | √                             |
| RFC 3665 | SIP Basic Call Flow Examples  | √       | √                             |
| RFC 3666 | SIP to PSTN Call Flows  | √       | √ (forwarded transparently)   |
| RFC 3680 | A SIP Event Package for Registration (IMS)  | √       | ×                             |

| RFC                       | Description  | Gateway | SBC                         |
|---------------------------|--|---------|-----------------------------|
| RFC 3711                  | The Secure Real-time Transport Protocol (SRTP)                             | √       | √                           |
| RFC 3725                  | Third Party Call Control   | √       | √                           |
| RFC 3824                  | Using E.164 numbers with SIP (ENUM)  | √       | √                           |
| RFC 3842                  | MWI  | √       | √                           |
| RFC 3891                  | "Replaces" Header  | √       | √                           |
| RFC 3892                  | The SIP Referred-By Mechanism  | √       | √                           |
| RFC 3903                  | SIP Extension for Event State Publication                                  | √       | √                           |
| RFC 3911                  | The SIP Join Header  | Partial | ×                           |
| RFC 3960                  | Early Media and Ringing Tone Generation in SIP                             | Partial | √                           |
| RFC 3966                  | The tel URI for Telephone Numbers  | √       | √                           |
| RFC 4028                  | Session Timers in the Session Initiation Protocol                          | √       | √                           |
| RFC 4040                  | RTP payload format for a 64 kbit/s transparent call - Clearmode            | √       | √ (forwarded transparently) |
| RFC 4117                  | Transcoding Services Invocation  | √       | ×                           |
| RFC 4168                  | The Stream Control Transfer Protocol (SCTP) as a Transport for SIP         | ×       | √                           |
| RFC 4235                  | Dialog Event Package   | Partial | Partial                     |
| RFC 4240                  | Basic Network Media Services with SIP - NetAnn                             | √       | √ (forwarded transparently) |
| RFC 4244                  | An Extension to SIP for Request History Information                        | √       | √                           |
| RFC 4320                  | Actions Addressing Identified Issues with SIP Non-INVITE Transaction       | √       | √                           |
| RFC 4321                  | Problems Identified Associated with SIP Non-INVITE Transaction             | √       | √                           |
| RFC 4411                  | Extending SIP Reason Header for Preemption Events                          | √       | √ (forwarded transparently) |
| RFC 4412                  | Communications Resource Priority for SIP                                   | √       | √ (forwarded transparently) |
| RFC 4458                  | SIP URIs for Applications such as Voicemail and Interactive Voice Response | √       | √ (forwarded transparently) |
| RFC 4475                  | SIP Torture Test Messages  | √       | √                           |
| RFC 4497 or ISO/IEC 17343 | Interworking between SIP and QSIG  | √       | √ (forwarded transparently) |
| RFC 4566                  | Session Description Protocol   | √       | √                           |
| RFC 4568                  | SDP Security Descriptions for Media Streams for SRTP                       | √       | √                           |
| RFC 4582                  | The Binary Floor Control Protocol (BFCP)                                   | ×       | √ (forwarded transparently) |

| RFC      | Description  | Gateway | SBC                         |
|----------|--|---------|-----------------------------|
| RFC 4715 | Interworking of ISDN Sub Address to sip isub parameter   | √       | √ (forwarded transparently) |
| RFC 4730 | A SIP Event Package for Key Press Stimulus (KPML)  | Partial | ×                           |
| RFC 4733 | RTP Payload for DTMF Digits  | √       | √                           |
| RFC 4904 | Representing trunk groups in tel/sip URIs  | √       | √ (forwarded transparently) |
| RFC 4960 | Stream Control Transmission Protocol   | ×       | √                           |
| RFC 4961 | Symmetric RTP and RTCP for NAT   | √       | √                           |
| RFC 4975 | The Message Session Relay Protocol (MSRP)  | ×       | √                           |
| RFC 5022 | Media Server Control Markup Language (MSCML)   | √       | ×                           |
| RFC 5079 | Rejecting Anonymous Requests in SIP  | √       | √                           |
| RFC 5627 | Obtaining and Using Globally Routable User Agent (UA) URIs (GRUU) in SIP   | √       | √ (forwarded transparently) |
| RFC 5628 | Registration Event Package Extension for GRUU  | √       | ×                           |
| RFC 5806 | Diversion Header, same as draft-levy-sip-diversion-08  | √       | √                           |
| RFC 5853 | Requirements from SIP / SBC Deployments  | -       | √                           |
| RFC 6035 | SIP Package for Voice Quality Reporting Event, using sip PUBLISH   | √       | √                           |
| RFC 6135 | An Alternative Connection Model for the Message Session Relay Protocol (MSRP)  | ×       | √                           |
| RFC 6140 | Registration for Multiple Phone Numbers in the Session Initiation Protocol (SIP)   | √       | √                           |
| RFC 6337 | Session Initiation Protocol (SIP) Usage of the Offer/Answer Model  | -       | √                           |
| RFC 6341 | Use Cases and Requirements for SIP-Based Media Recording<br>(Session Recording Protocol - draft-ietf-siprec-protocol-02, and Architecture - draft-ietf-siprec-architecture-03) | √       | √                           |
| RFC 6442 | Location Conveyance for the Session Initiation Protocol  | -       | √                           |
| RFC 7245 | An Architecture for Media Recording Using the Session Initiation Protocol  | √       | √                           |
| RFC 7261 | Offer/Answer Considerations for G723 Annex A and G729 Annex B  | √       | √                           |

## 4.2 SIP Message Compliance

The SIP device complies with RFC 3261, as shown in the following subsections.

### 4.2.1 SIP Functions

The device supports the following SIP Functions:

**Table 4-2: Supported SIP Functions**

| Function                | Comments   |
|-------------------------|--|
| User Agent Client (UAC) | -  |
| User Agent Server (UAS) | -  |
| Proxy Server            | The device supports working with third-party Proxy Servers such as Nortel CS1K/CS2K, Avaya, Microsoft OCS, Alcatel, 3Com, BroadSoft, Snom, Cisco and many others |
| Redirect Server         | The device supports working with third-party Redirection servers   |
| Registrar Server        | The device supports working with third-party Registration servers  |

### 4.2.2 SIP Methods

The device supports the following SIP Methods:

**Table 4-3: Supported SIP Methods**

| Method    | Comments  |
|-----------|---|
| ACK       | -   |
| BYE       | -   |
| CANCEL    | -   |
| INFO      | -   |
| INVITE    | -   |
| MESSAGE   | Supported only by the SBC application and send only                     |
| NOTIFY    | -   |
| OPTIONS   | -   |
| PRACK     | -   |
| PUBLISH   | Send only   |
| REFER     | Inside and outside of a dialog  |
| REGISTER  | Send only for Gateway application; send and receive for SBC application |
| SUBSCRIBE | -   |
| UPDATE    | -   |

### 4.2.3 SIP Headers

The device supports the following SIP headers:

**Table 4-4: Supported SIP Headers**

| SIP Header           | SIP Header           |
|----------------------|----------------------|
| Accept               | Proxy- Authenticate  |
| Accept-Encoding      | Proxy- Authorization |
| Alert-Info           | Proxy- Require       |
| Allow                | Prack                |
| Also                 | Reason               |
| Asserted-Identity    | Record- Route        |
| Authorization        | Refer-To             |
| Call-ID              | Referred-By          |
| Call-Info            | Replaces             |
| Contact              | Require              |
| Content-Disposition  | Remote-Party-ID      |
| Content-Encoding     | Response- Key        |
| Content-Length       | Retry-After          |
| Content-Type         | Route                |
| Cseq                 | Rseq                 |
| Date                 | Session-Expires      |
| Diversion            | Server               |
| Expires              | Service-Route        |
| Fax                  | SIP-If-Match         |
| From                 | Subject              |
| History-Info         | Supported            |
| Join                 | Target-Dialog        |
| Max-Forwards         | Timestamp            |
| Messages-Waiting     | To                   |
| MIN-SE               | Unsupported          |
| P-Associated-URI     | User- Agent          |
| P-Asserted-Identity  | Via                  |
| P-Charging-Vector    | Voicemail            |
| P-Preferred-Identity | Warning              |
| Priority             | WWW- Authenticate    |
| Privacy              | -                    |

**Note:** The following SIP headers are not supported:

- Encryption
- Organization

## 4.2.4 SDP Fields

The device supports the following SDP fields:

**Table 4-5: Supported SDP Fields**

| SDP Field | Name                                 |
|-----------|--------------------------------------|
| v=        | Protocol version number              |
| o=        | Owner/creator and session identifier |
| a=        | Attribute information                |
| c=        | Connection information               |
| d=        | Digit                                |
| m=        | Media name and transport address     |
| s=        | Session information                  |
| t=        | Time alive header                    |
| b=        | Bandwidth header                     |
| u=        | URI description header               |
| e=        | Email address header                 |
| i=        | Session info header                  |
| p=        | Phone number header                  |
| y=        | Year                                 |

## 4.2.5 SIP Responses

The device supports the following SIP responses:

**Table 4-6: Supported SIP Responses**

| Response Type                               |                         | Comments   |
|---|-------------------------|--|
| <b>1xx Response (Information Responses)</b> |                         |  |
| 100   | Trying                  | The device generates this response upon receiving a Proceeding message from ISDN or immediately after placing a call for CAS signaling.  |
| 180   | Ringing                 | The device generates this response for an incoming INVITE message. Upon receiving this response, the device waits for a 200 OK response.   |
| 181   | Call is Being Forwarded | The device doesn't generate these responses. However, the device does receive them. The device processes these responses the same way that it processes the 100 Trying response. |

| Response Type                                  |                    | Comments   |
|--|--------------------|--|
| 182  | Queued             | The device generates this response in Call Waiting service. When the SIP device receives a 182 response, it plays a special waiting Ringback tone to the telephone side.   |
| 183  | Session Progress   | The device generates this response if the Early Media feature is enabled and if the device plays a Ringback tone to IP   |
| <b>2xx Response (Successful Responses)</b>     |                    |  |
| 200  |                    | OK   |
| 202  |                    | Accepted   |
| 204  |                    | No Notification  |
| <b>3xx Response (Redirection Responses)</b>    |                    |  |
| 300  | Multiple Choice    | The device responds with an ACK, and then resends the request to the first new address in the contact list.  |
| 301  | Moved Permanently  | The device responds with an ACK, and then resends the request to the new address.  |
| 302  | Moved Temporarily  | The device generates this response when call forward is used to redirect the call to another destination. If such a response is received, the calling device initiates an INVITE message to the new destination. |
| 305  | Use Proxy          | The device responds with an ACK, and then resends the request to a new address.  |
| 380  | Alternate Service  | The device responds with an ACK, and then resends the request to a new address.  |
| <b>4xx Response (Client Failure Responses)</b> |                    |  |
| 400  | Bad Request        | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 401  | Unauthorized       | Authentication support for Basic and Digest. Upon receipt of this message, the device issues a new request according to the scheme received on this response.  |
| 402  | Payment Required   | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 403  | Forbidden          | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 404  | Not Found          | The device generates this response if it is unable to locate the callee. Upon receiving this response, the device notifies the User with a Reorder Tone.   |
| 405  | Method Not Allowed | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 406  | Not Acceptable     | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |

| Response Type |                               | Comments  |
|---------------|-------------------------------|---|
| 407           | Proxy Authentication Required | Authentication support for Basic and Digest. Upon receipt of this message, the device issues a new request according to the scheme received on this response.   |
| 408           | Request Timeout               | The device generates this response if the no-answer timer expires. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |
| 409           | Conflict                      | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |
| 410           | Gone                          | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |
| 411           | Length Required               | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |
| 413           | Request Entity Too Large      | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |
| 415           | Unsupported Media             | If the device receives a 415 Unsupported Media response, it notifies the User with a Reorder Tone.<br>The device generates this response in case of SDP mismatch.   |
| 420           | Bad Extension                 | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |
| 423           | Interval Too Brief            | The device does not generate this response. Upon receipt of this message the device uses the value received in the Min-Expires header as the registration time.   |
| 424           | Bad Location Information      | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |
| 428           | Use Identity Header           | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |
| 429           | Provide Referrer Identity     | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |
| 433           | Anonymity Disallowed          | If the device receives a 433 Anonymity Disallowed, it sends a DISCONNECT message to the PSTN with a cause value of 21 (Call Rejected). In addition, the device can be configured, using the Release Reason Mapping, to generate a 433 response when any cause is received from the PSTN side. |
| 436           | Bad Identity Info             | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |
| 437           | Unsupported Credential        | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.  |

| Response Type |                                     | Comments   |
|---------------|-------------------------------------|--|
| 438           | Invalid Identity Header             | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 439           | First Hop Lacks Outbound Support    | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 440           | Max-Breadth Exceeded                | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 470           | Consent Needed                      | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 480           | Temporarily Unavailable             | If the device receives this response, it notifies the User with a Reorder Tone.<br>This response is issued if there is no response from remote.  |
| 481           | Call Leg/Transaction Does Not Exist | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 482           | Loop Detected                       | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 483           | Too Many Hops                       | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 484           | Address Incomplete                  | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 485           | Ambiguous                           | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 486           | Busy Here                           | The SIP device generates this response if the called party is off-hook and the call cannot be presented as a call waiting call. Upon receipt of this response, the device notifies the User and generates a busy tone.   |
| 487           | Request Canceled                    | This response indicates that the initial request is terminated with a BYE or CANCEL request.   |
| 488           | Not Acceptable                      | The device doesn't generate this response. Upon receipt of this message and before a 200 OK has been received, the device responds with an ACK and disconnects the call.   |
| 491           | Request Pending                     | When acting as a UAS: the device sent a re-INVITE on an established session and is still in progress. If it receives a re-INVITE on the same dialog, it returns this response to the received INVITE.<br>When acting as a UAC: If the device receives this response to a re-INVITE, it starts a timer. After the timer expires, the UAC tries to send the re-INVITE again. |

| Response Type                           |                         | Comments   |
|---|-------------------------|--|
| 5xx Response (Server Failure Responses) |                         |  |
| 500                                     | Internal Server Error   | Upon receipt of any of these responses, the device releases the call, sending an appropriate release cause to the PSTN side. The device generates a 5xx response according to the PSTN release cause coming from the PSTN. |
| 501                                     | Not Implemented         |  |
| 502                                     | Bad gateway             |  |
| 503                                     | Service Unavailable     |  |
| 504                                     | Gateway Timeout         |  |
| 505                                     | Version Not Supported   |  |
| 6xx Response (Global Responses)         |                         |  |
| 600                                     | Busy Everywhere         | Upon receipt of any of these responses, the device releases the call, sending an appropriate release cause to the PSTN side.   |
| 603                                     | Decline                 |  |
| 604                                     | Does Not Exist Anywhere |  |
| 606                                     | Not Acceptable          |  |
