Product Notice #0382

Release of AudioCodes Routing Manager (ARM) Version 9.0 for General Availability

We are pleased to announce the release of ARM Software Version 9.0 (9.0.18) for General Availability (GA)!

This release includes many new exciting features as well as resolved constraints from previous releases. For a full description of the release, click here to download the *AudioCodes Routing Manager Release Notes* from AudioCodes' website.

The software for this release is available for download from **AudioCodes' Services Portal** (registered customers only).

Key Features

- ARM and SBC combined routing solution enables to explicitly request to route calls using the local SBC routing table.
- New ARM ability to continue call routing at SBC level, based on SIP INVITE message's Request-URI header content.
- ARM's new direction-based lock/unlock action on a peer connection blocks calls based on a specified call direction (incoming or outgoing).
- ARM license usage can now be monitored using the new statistics metric, aggregative number of ARM sessions.
- Routing Rule match notification can be extended with additional information from ARM. For example, E911 call notifications can now include additional location-based information.
- Test Route feature now also displays call forking paths.
- ARM Server security has been enhanced with advanced SSH user management.
