1 About SmartTAP 360° Live

SmartTAP 360° Live is an enterprise-wide compliance and liability recorder. Though most recorders in the market focus on Contact Center features, SmartTAP 360° Live is deployed across the enterprise to capture calls, either on-demand or, in some cases on-demand.

AudioCodes' SmartTAP 360° Live for Microsoft Teams is a secure call recording solution that enables the recording of key business interactions within a Microsoft SfB and Teams environment. SmartTAP 360° Live is compatible with VoIP, TDM, and hybrid telephony environments.

Using an integral Skype for Business recording toolbar, enterprise users can record with SmartTAP 360° Live anywhere and anytime they are on Skype for Business calls. SmartTAP 360° Live can initially be deployed on a small scale and be scaled up to support many thousands of users using the product's linear scalability feature.

Figure 1-1: SmartTAP 360° Live Solution

SmartTAP 360° Live includes audio video and instant messaging recording capabilities.

The screenshot displays the SmartTAP 360° Live interface. On the left, there is a sidebar with navigation options: System, Users, Status, Calls, and Messages. The 'Calls' section is active, showing a list of calls. The main area displays a call log table with columns: Name, Start Time, Duration, Direction, Called Party, Release Cause, Recording Type, Tags, Media Type, and Media Status. Below the table, there is a video call window showing two participants: a woman on the left and a woman on the right. Below the video window, there is a timeline of the call with a play button and a volume slider.

Name	Start Time	Duration	Direction	Called Party	Release Cause	Recording Type	Tags	Media Type	Media Status
Thomas (+3051), Anna	Jan 14, 2019 10:41:45 AM	00:00:16	INCOMING	user3051	NORMAL	FULL_TIME			
Thomas (+3051), Anna	Jan 14, 2019 10:40:23 AM	00:00:52	OUTGOING	user3056	NORMAL	FULL_TIME			
Thomas (+3051), Anna	Jan 14, 2019 10:39:52 AM	00:00:20	INCOMING	user3051	MISSED	FULL_TIME			
Thomas (+3051), Anna	Jan 14, 2019 10:37:04 AM	00:02:02	INCOMING	user3051	NORMAL	FULL_TIME			

The screenshot displays the SmartTAP 360° Live interface for instant messages. The top section shows a header for 'Instant Messages between 12/1/18 09:07 AM and 12/26/18 11:07 AM'. Below this is a table with columns: User, First Message Time, Last Message Time, and Messaging Parties. The table shows a conversation between 'Mast, Danielle' and 'sip:user2@sfb2019.lab'. Below the table, there is a search bar and a 'Participants' section. The main area shows a chat window with messages from 'Mast, Danielle' and 'sip:user2@sfb2019.lab'. The messages are as follows:

- From sip:user2@sfb2019.lab: Hello (Dec 26, 2018 11:05:45 AM)
- From Mast, Danielle: Hi (Dec 26, 2018 11:05:49 AM)
- From Mast, Danielle: fine, thank you. (Dec 26, 2018 11:06:13 AM)
- From Mast, Danielle: And you? (Dec 26, 2018 11:06:18 AM)
- From sip:user2@sfb2019.lab: Great

SmartTAP 360° Live Benefits

SmartTAP 360° Live benefits organizations and enterprises as follows:

- Captures corporate interactions including voice, video and instant messages
- Recordings can be used for customer analytics to provide intelligence of customer dealings to serve at the basis for improving key performance indicators and thereby enhance customer satisfaction and loyalty.

- Minimizes exposure to disputes and mitigates the risk of reputation damage
- Supports internal, external and mobile interactions from both remote and federated users
- Certified by Microsoft Teams as an On-premises call recording solution for Microsoft Teams customers. The solution has been tested and verified to provide the quality, compatibility, and reliability that organizations and customers expect from Microsoft solutions, backed by best-in-class product maintenance, service operations, and support.
- Compliance-grade recording and regulation-specialized features

Competitive Advantages

■ User Friendly

- Intuitive Web-based screens make training easy. No downtime for training.
- All browser-based access with no additional client desktop software.
- Supports any Wi-Fi tablet or smartphone.

■ Economical

- Large system features at a fraction of the cost.
- Linear growth of SmartTAP 360° Live concurrent conversations – no forklift upgrades.
- Add one license at a time, or a hundred.
- Lowest total cost of ownership.
- Centralized architecture reduces hardware investments.

■ Scalable

- Start with as few as 8 concurrent recording channels and scale upwards.
- Supports for single site, multi-site and cloud deployments.
- Start with recording and then expand capabilities with easy-to-add modules.

Features Overview

The table below lists and describes AudioCodes' SmartTAP 360° Live recording features.

Table 1-1: SmartTAP 360° Live Features

Feature	Details
Status Page	<ul style="list-style-type: none"> ■ Displays the current user call status ■ Live Call Monitoring ■ Notes can be added to an active call ■ Allows switching between Grid and List View ■ Pause / Resume Recording

Feature	Details
	<ul style="list-style-type: none"> ■ Record or Save on Demand
Record or Save on Demand	<ul style="list-style-type: none"> ■ Record on Demand (ROD): Recording contains audio from the point network administrator decides to record the call. ■ Save on Demand (SOD): Recording contains audio from the beginning of the call. ■ Recording using ROD or SOD is manually selected from the GUI or Skype for Business CWE or Microsoft Teams client extension ■ Any target provisioned as ROD or SOD can manually control start/stop recording. ■ Any user with appropriate security profile credentials can manually trigger a recording of another user's calls.
PCI Compliance	<ul style="list-style-type: none"> ■ Capability to pause / resume a recording during sensitive areas of a conversation with a customer, e.g., when taking Credit Card details. ■ Manual process, executed from the Status page.
Recording Profiles	<ul style="list-style-type: none"> ■ Can be created and assigned to multiple parties to define the recording method. ■ Full Time Recording – Automatic audio or video recording. ■ Record on Demand – Audio recording is manually triggered from the Status page in the Web interface or Skype for Business Conversation Window Extension (CWE) toolbar ■ Save on Demand – Audio or Video recording is manually triggered from the Status page in the GUI or from the Skype for Business CWE toolbar ■ PCI (Payment Card Industry) Pause / Resume Recording (Optional) – Audio recording is manually triggered from the Status page in the GUI or from the Skype for Business CWE toolbar. ■ IM recording – Automatic Instant Message recording.
Security Profiles	<ul style="list-style-type: none"> ■ Can be created and assigned to multiple parties to define security access in SmartTAP 360° Live.

Feature	Details
LDAP Integration	<ul style="list-style-type: none"> ■ Allows SmartTAP 360° Live to use Active Directory users, groups, and security groups ■ LDAP Filtering by user, group or security group.
Microsoft Teams Integration	<ul style="list-style-type: none"> ■ Record calls of Targeted Users on different devices, including Teams desktop, web, mobile applications and phones. ■ Record the calls audio, video and Video and Screen Sharing. ■ Microsoft Azure Active Directory users mapping into SmartTAP 360° Live.
Legal Hold	<ul style="list-style-type: none"> ■ The user's retention process does not purge their recordings when placed on legal hold.
Audit Trail	<ul style="list-style-type: none"> ■ Search audit trail based on date range, user, set of users. ■ Filtering of search results directly in the results screen, sorting ascending/descending by clicking column header, shortcuts to the beginning/end page within the results screen. ■ Export of Audit Trail results and call Meta Data to Excel file.
Flexible and Powerful Call and Instant Message Search Capabilities	<ul style="list-style-type: none"> ■ Search criteria based on date range, time of day range, user, set of users, group, set of groups, etc. ■ Easily filter search results, sorting ascending/descending by clicking column header, shortcuts to the beginning/end page within the results screen. ■ Use of a * symbol 'wild card' to apply a filter. ■ Columns can be added to / removed from the results screen. ■ Search for calls based on Calling (Caller ID), Called or Answering Party ■ Search for calls based on assigned Call Tag, including Notes. ■ Search for Instant Messages based on included strings. ■ Easily export Call Meta Data from search results to Excel

Feature	Details
	<p>file.</p> <ul style="list-style-type: none"> ■ Easily export an Instant Message conversation to a PDF file.
Playback (Call Listen/Download/Email)	<ul style="list-style-type: none"> ■ Fast-forward / Rewind or select playback position controls. ■ Volume control.
Call and Instant Message Retention	<ul style="list-style-type: none"> ■ Number of retention periods can be added and applied to specific user(s). ■ Recordings are automatically deleted based on retention period. ■ Option to retain recordings based on evaluation status.
Automatic Email Notifications	<ul style="list-style-type: none"> ■ Automatic email notifications when Alarms are triggered or thresholds are exceeded (Recording licenses or Storage capacity).
Encryption of Stored Recordings	<ul style="list-style-type: none"> ■ Option to encrypt stored audio recordings.
Recordings Storage in Local Drive, NAS or SAN	<ul style="list-style-type: none"> ■ Recordings stored in local hard disk or in NAS/SAN through Windows share (SMB). ■ Recording stored on Microsoft Azure Blob which is used for high-scale and secure object storage for cloud-native workloads, archives, data lakes, high-performance computing, and machine learning.
Compression of Stored Recordings	<ul style="list-style-type: none"> ■ Audio recordings stored as G.711 (normal compression) or G.729a (high compression).
Agent Evaluation	<ul style="list-style-type: none"> ■ Evaluation forms can be created: agents evaluations, review evaluations, and reports can be generated.
Distributed Architecture	<ul style="list-style-type: none"> ■ One SmartTAP 360° Live may be deployed across multiple physical locations. ■ Recording on remote locations is not interrupted even if connection to main site is down.
Multiple Call Protocols and Physical Interfaces Share the Same UI	<ul style="list-style-type: none"> ■ One SmartTAP 360° Live server is capable of recording diverse call signaling and voice protocols.

Feature	Details
	<ul style="list-style-type: none"> SmartTAP 360° Live records PSTN, Lync, Analog, and VoIP simultaneously and transparently to end users.
Skype for Business Client Toolbar	<ul style="list-style-type: none"> Auto extended Skype for Business CWE for convenient access to features like ROD / SOD, PCI and Call Tagging
Call Tagging	<ul style="list-style-type: none"> User definable tags  i.e., Customer Name, Account Number, Malicious Call, etc. Default Notes tag available by default. Tags are easily added live from the Status page or from Skype for Business CWE, or post call, from the Calls tab.
Single Sign-On	<ul style="list-style-type: none"> A user gains access into the SmartTAP 360° Live GUI or Skype for Business client toolbar after validation of their SmartTAP 360° Live security profile and authentication of their credentials with LDAP Active Directory. For Microsoft Team clients: Single Sign-on is supported for logging onto the SmartTAP 360° Live Personal App. Refer to Step 8 Setup SmartTAP Personal App in the <i>SmartTAP 360° Live Deployment Guide</i>
SIPRec	<ul style="list-style-type: none"> Session Initiation Protocol (SIP) establishes an active recording session and reporting of metadata to the SRS (SmartTAP 360° Live) of the active communication session traversing the SRC (AudioCodes SBC or Gateway). https://datatracker.ietf.org/doc/draft-ietf-siprec-protocol/
REST API	<ul style="list-style-type: none"> Allows third-party applications integrated with SmartTAP 360° Live to add users, retrieve metadata, download recordings, target users, etc. Refer to SmartTAP REST API documentation for more details. Initiate ROD or SOD from a third-party application using the API. Support for Server Sent Events (SSE). Third-party applications can receive call state events for targeted users / endpoints using SSE. Use events to determine when to ROD or SOD, Live Monitor, etc.
Call Recording	<ul style="list-style-type: none"> Custom prompt to be played to external call participants

Feature	Details
Announcement Server	<p>so that their calls may be recorded in Skype for Business environments. Example: 'Your call may be recorded...'</p> <ul style="list-style-type: none"> ■ Custom IVR menu to request recording consent from external call participants and trigger recording when consent is given. ■ Advantages: <ul style="list-style-type: none"> ✓ Plays announcement to inbound PSTN call participants ✓ Deploys on Physical or Virtual Servers ✓ Supports N+1 Resiliency
SmartTAP 360° Live Media Proxy (Skype for Business)	<ul style="list-style-type: none"> ■ The software Proxy Service is an RTP Proxy for recorded user / device calls. ■ A recorded call's media is redirected through the proxy, allowing SmartTAP 360° Live to capture a copy of the SRTP conversation. ■ Advantages: <ul style="list-style-type: none"> ✓ Proxy Server resides in the LAN ✓ Inter and intra region calls stay on the private network ✓ Allows easily recording internal, PSTN and conference calls ✓ Deployable in remote locations to reduce network bandwidth
User / Device Attributes	<p>A SmartTAP 360° Live user or device attribute has three purposes:</p> <ul style="list-style-type: none"> ■ Additional information can be added to the user account within SmartTAP 360° Live, i.e., Ext, Tel URI, Address, etc., for informational purposes only. ■ Designates to SmartTAP 360° Live what to use to trigger recording, i.e., adds a SIP_URI attribute and provides a value assigned to the user. If the user makes a SIP call, SmartTAP 360° Live triggers a recording based on the SIP_URI. ■ Mapping Active Directory attributes to user / device information on SmartTAP 360° Live.

Feature	Details
	<ul style="list-style-type: none"> ■ Mapping Microsoft Azure Active Directory Teams users object ID to user properties on SmartTAP 360° Live.
Automatic Instant Message Recording	<ul style="list-style-type: none"> ■ Recording of instant messages for person-to-person chat between two users or group chat between two or more users.
Video Recording	<ul style="list-style-type: none"> ■ Recording Profile: Full Time Recording and Save on Demand Video ■ Playback video from the Calls List and Evaluation menu ■ Download audio and video call types (together).
Desktop Recording	Skype for Business and Microsoft Teams Video and Screen Sharing over VBSS (Video Based Screen Sharing) recording is supported.
Timeline View	View call results data for a specific user/device over a time line. Each call type is represented on the timeline by a unique icon.
Automatic Registration of Managed Devices	Managed device other than of type 'Host' register automatically with the application server by sending periodic heartbeats. Devices also update their connection status information whenever the connection state changes information.
New User Interface Design	The SmartTAP 360° Live User interface design and layout has been updated to the look and feel for AudioCodes product family.
Call Type-based recording	It is now possible to define specific call types to be recorded through SmartTAP 360° Live recording profiles. For example, it is possible to select recording of the following call types: in domain, PSTN, external, response group calls and more.
Selective Announcement service	The Announcement service can be enabled for recording profile and activated on calls for the users that are associated with the recording profile.
Beep tone generation	Playing recording beep tone to the local call parties is possible with SmartTAP 360° Live Media Proxy.
Test calls in Skype for Business Deployment	Enhanced System Health Monitoring with an option to activate periodic test calls and with alarms.

Feature	Details
Communication status icons	SmartTAP 360° Live inter-components communication status shows the statuses reported by managed devices for its connections with other components in the system.
Malicious call recording enhancement	Enables users to save a call recording after the call was ended for a predefined time.
OVOC Management	SmartTAP 360° Live server components can be monitored from OVOC (starting from OVOC version 7.6.100) including the sending of alarms and statuses.
Support for Skype For Business 2019	SmartTAP 360° Live Announcement and Application servers can be installed on the Skype For Business 2019 platform.
Original Call Reason	Original call release reason is presented as part of the call recording meta-data.
Scalability	SmartTAP 360° Live SIPRec solution scalability enhancement with an option to reroute a call to another recording server when the server is at the maximum capacity.
SmartTAP 360° Live low-end Profile	SmartTAP 360° Live low-end profile system can be deployed on the Mediant 1000B OSN4B 256 GB SSD alongside the SBA with up to 250 users and 8 trunks.
Multilingual support	<p>The SmartTAP 360° Live interface supports the following languages:</p> <ul style="list-style-type: none"> ■ English ■ German ■ Spanish ■ French
Personal App in Microsoft Teams	SmartTAP 360° Live can be added to Microsoft Teams as a Teams App that includes On-demand recording buttons full application access tab. Once setup can be uploaded to the customer organization's App Store and run on Teams desktop or Teams mobile clients.

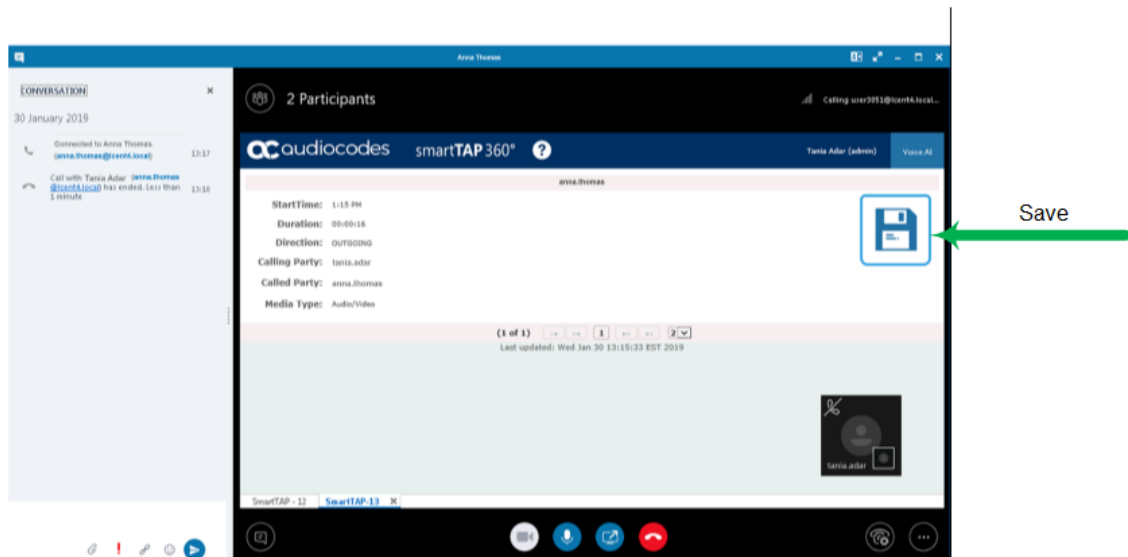

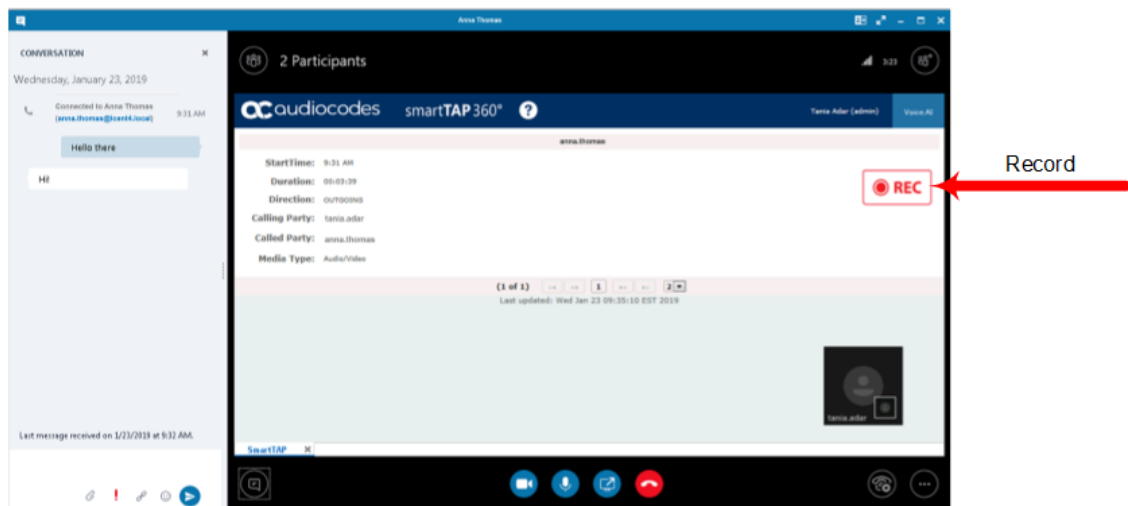

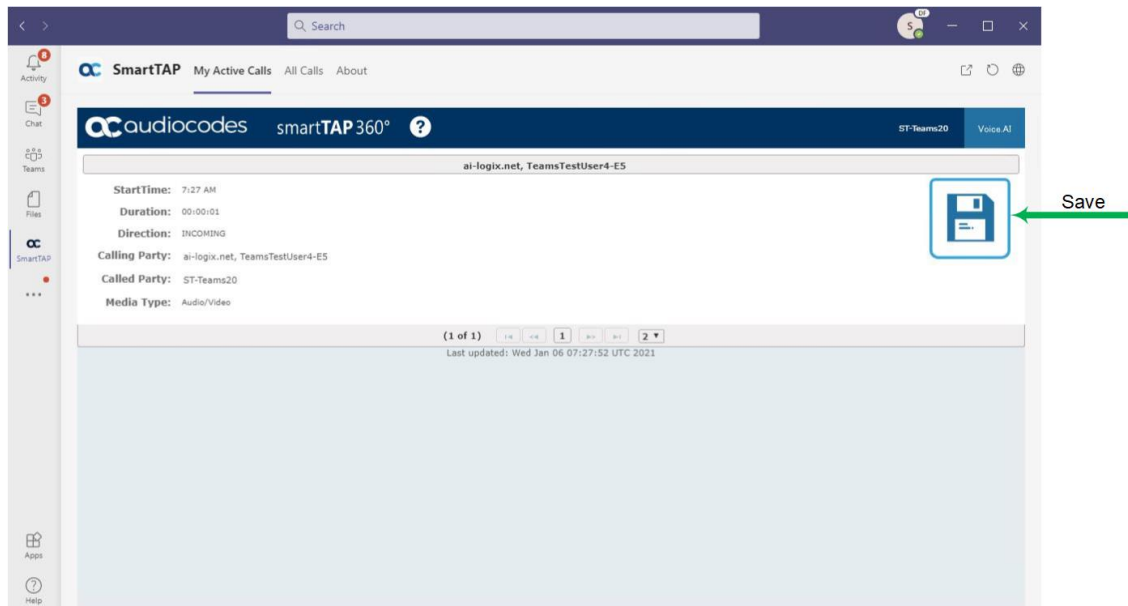

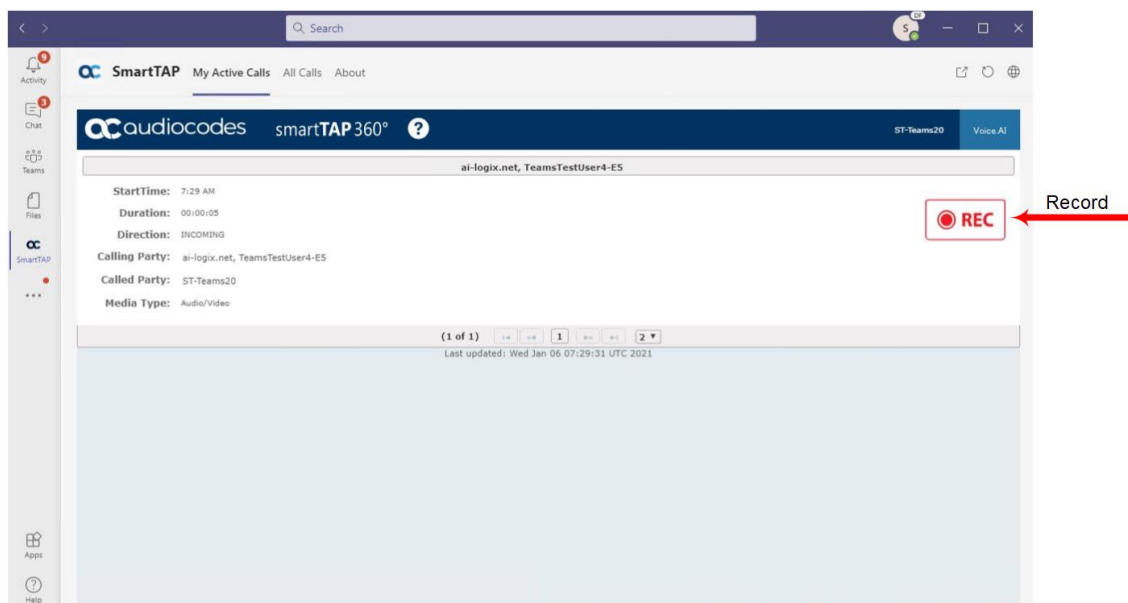

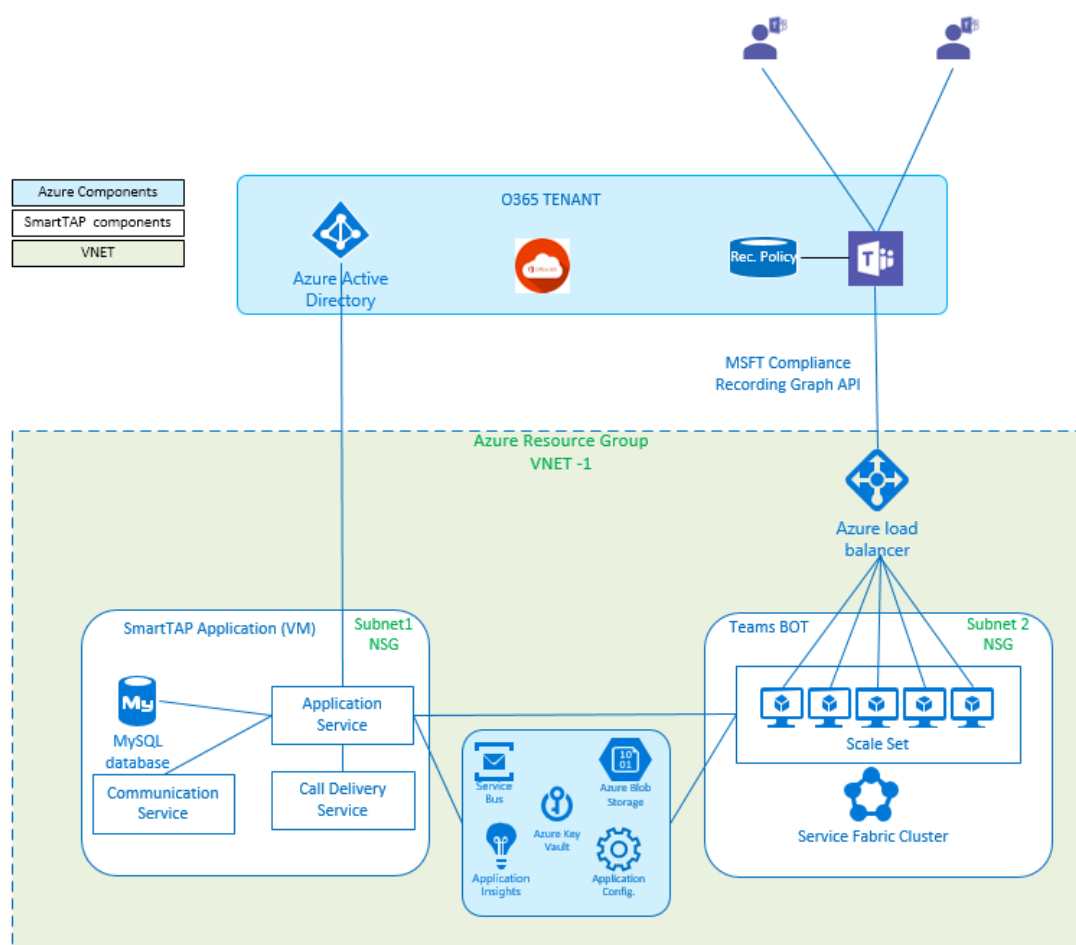

Figure 1-2: Save on Demand (SOD) in SmartTAP 360° Live Live Skype for Business Client**Figure 1-3: Record on Demand (ROD) in SmartTAP 360° Live Live Skype for Business Client**

About this Guide

This guide helps enterprise network administrators obtain full benefit from the SmartTAP 360° Live Call Recording System. The guide comprises the following sections:

Table 1-2: About this Document

Section	Description
Logging In on page 15	Shows how to log in to the SmartTAP 360° Live Web Interface.
Getting Acquainted with the GUI on page 18	Gets the network administrator acquainted with the SmartTAP 360° Live management GUI.
Performing Initial Configuration on page 25	Describes the steps to take to perform initial SmartTAP 360° Live configuration in order to record a call.
Searching for Messages on page 195	Searching for Messages

Section	Description
Searching for Calls on page 142	Searching for Calls
Testing the Initial Configuration on page 27	Shows how to record a call to test the initial configuration.
Configuring Advanced Features on page 29	Details the user interface, features and procedures.
Single Sign-On for SmartTAP 360° Live on page 204	Shows how to simplify the login process for domain users with Single Sign-On (SSO).
SmartTAP 360° Live Skype for Business Toolbar on page 221	Shows how to use the SmartTAP 360° Live Skype for Business toolbar.
Media Exporter on page 224	Describes the Bulk Media Exporter tool to download Meta Data and Call Records.
API Integration on page 230	Describes the API Reference.
Recording Health Monitor on page 232	Describes the Recording Health Monitor utility
Announcement Server (Skype for Business) on page 237	Describes the setup and use of the Announcement Server (Skype for Business)
Microsoft Azure Active Directory on page 252	Describes the setup for Microsoft Azure Active Directory Teams user mapping and authentication.
Setting up Microsoft Azure Blob Storage Account on page 74	Describes how to configure Microsoft Blob Storage that is used for saving recorded media in the Microsoft Teams deployment.

2 Logging In

After the SmartTAP 360° Live software is installed, an Admin user account is created by default. This user account allows the administrator to access the SmartTAP 360° Live's Web-based management tool for the first time and start initial configuration and administration (see Chapter [Performing Initial Configuration](#) on page 25). Alternatively, you can log in using the credentials of the Office 365 user.

➤ **To log in:**

1. Access the SmartTAP 360° Live user interface from a browser.
2. Enter the SmartTAP 360° Live server IP address or hostname; the Login page opens.

Figure 2-1: Login Page

3. Log in using one of the following options:
 - Enter default Login ID 'admin' and default password 'admin'
 - Enter the credentials of the Microsoft 365 Office user
4. Click the **Log in** button.

Logging in with Microsoft Office 365 Credentials

This section describes how to login with Microsoft Office 365 Credentials.

➤ **To login with Microsoft Office 365 credentials:**

1. Click **Sign-in with Microsoft** button.

Figure 2-2: Microsoft Sign In

The image shows a Microsoft Sign In form. It has two input fields: "Login Id" and "Password". Below the "Password" field is a "Log in" button. Below the "Log in" button is a horizontal line with the word "Or" in the center. Below the line is a "Sign In with Microsoft" button.

The user is redirected to Microsoft MFC Login page:

Figure 2-3: Microsoft MFC Login Page

The image shows the Microsoft MFC Login Page. It features the Microsoft logo at the top left. Below the logo is the text "Sign in". Underneath "Sign in" is a text input field labeled "Email, phone, or Skype". Below the input field are two links: "Can't access your account?" and "Sign-in options". At the bottom right is a blue "Next" button.

Figure 2-4: Login id

2. Enter the Sign in information and password and click **Next**.

Figure 2-5: Sign in MFC

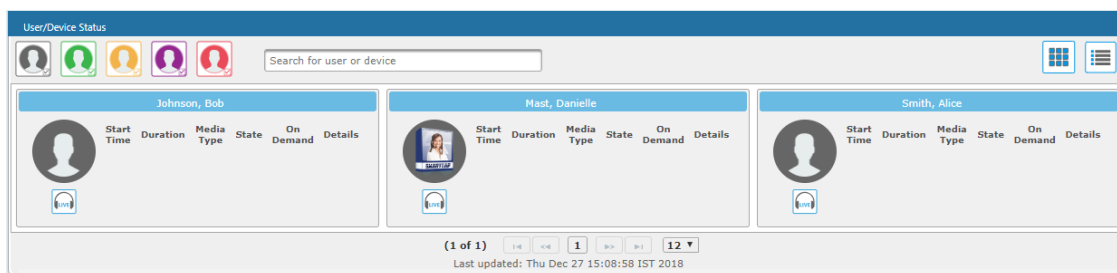

The image shows a Microsoft sign-in interface within a light gray border. At the top left is the Microsoft logo. Below it, the text "Sign in" is displayed in a large, bold font. Underneath, there is a text input field containing the email address "debajyotid@smarttap.onmicrosoft.com". Below the input field are two links: "Can't access your account?" and "Sign-in options". At the bottom right, there is a blue rectangular button with the word "Next" in white text.

3 Getting Acquainted with the GUI

This section introduces the SmartTAP 360° Live management GUI. The figure below shows the main screen. The following areas are identical across all GUI screens:

- Upper banner (see the figure below)
- Navigation (see the next page)
- Results display & data entry area (see the next page)
- Execution results area (in the case of some commands) (see the next page)

Figure 3-1: SmartTAP 360° Live Main Screen – Upper Banner

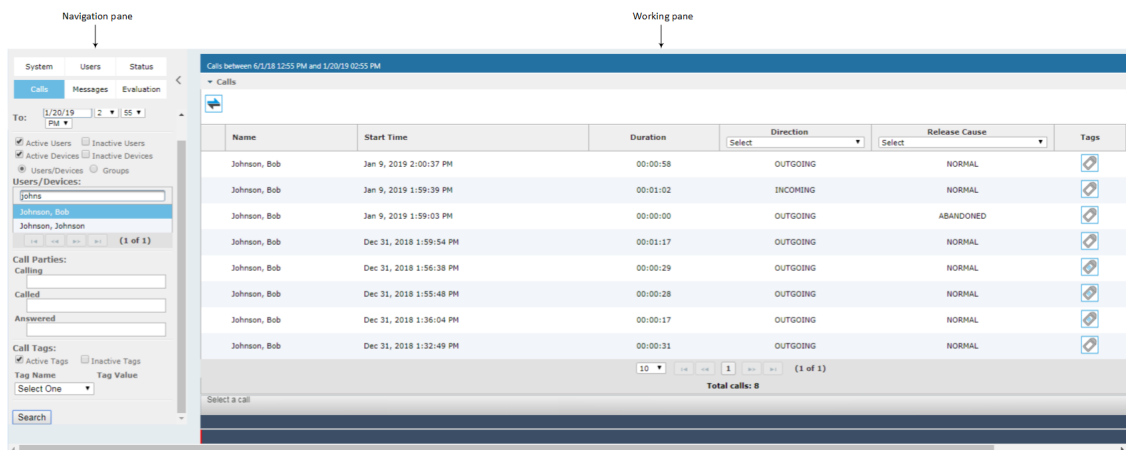

The table below describes the active buttons on the toolbar.

Table 3-1: SmartTAP 360° Live Main Screen – Active Buttons on the Toolbar

Button	Icon	Description
Home		Go to the Home Page (default start page)
Help		Displays help for the currently displayed content
Language Toggle		Toggles between the following interface languages: <ul style="list-style-type: none"> ■ English ■ German ■ Spanish ■ French
Log off		Log off user (identified to the left of this button)

Figure 3-2: SmartTAP 360° Live Main Screen

The figure above shows the following three areas below the upper banner:

- Navigation area, allowing users to perform queries, configuration, and all the other features available on the platform.
- Results display and data entry area, showing displays associated with the items selected in the Navigation area.
- Command execution results and data entry display area, displayed when an executed command results in failure/success:
 - Green font = successful execution
 - Red font = failed execution, with the reason for the failure
- Multilingual support:

You can toggle in the Toolbar to display the user interface in the following languages:

- English (default)
- German
- Spanish
- French

Figure 3-3: Multilingual Support

Determining User/Device Status

The User/Device Status screen is accessible by clicking the Home button on the upper banner, or by selecting **Status** tab > **User Call Status**. The screen features two views:

- **Grid**
- **List**

Both of the above options offer the same functionality, therefore either can be used.

The figure below shows the List View 

Figure 3-4: List View

Name	Start Time	Duration	Direction	Media Type	State	On Demand	Details
Adar (x3051), Tania	Jan 17, 2019 5:40:36 PM	00:00:45	INCOMING		RECORDING		
Banks (x3056), Eric	Jan 17, 2019 5:40:36 PM	00:00:45	OUTGOING		RECORDING		
Barrett, Lorenzo							
Huff, Rosie							
Jenkins, Edgar							
Warner, Barbara							

The figure below shows the Grid View 

Figure 3-5: Grid View

Name	Start Time	Duration	Media Type	State	On Demand	Details
Adar (admin), Tania	3:53 PM	00:00:17		RECORDING		
Banks (x3056), Eric						
Barrett, Lorenzo						
Entry Phone						
Huff, Rosie						
Jenkins (TestCallCaller), Edgar						
Thomas (x3051), Anna	3:53 PM	00:00:18		RECORDING		
Warner (TestCallCallee), Barbara						

The figure below shows a user status with an active call:

Figure 3-6: User/Device Status with an Active Call Skype for Business Client

Name	Start Time	Duration	Media Type	State	On Demand	Details
pool3usr010	12:59 PM	00:00:17		RECORDING		

Figure 3-7: User/Device Status with an Active Call Microsoft Teams Client

The screen provides near real-time information on the targeted users and their recording status. The table below describes the Status screen features.

Table 3-2: Status Features

Field	Description		
Name	Sorted ascending/descending by clicking header up/down arrows. Name field entry displays only entries with matching pattern.		
Call Started	The time the call started. Sortable by clicking the up/down arrows.		
Call Duration	The duration of the call. Sortable by clicking the up/down arrows.		
Call Direction	One of the following values: <ul style="list-style-type: none"> ■ Incoming ■ Outgoing ■ Conference Sortable by clicking the up/down arrows. Call Direction drop-down displays only matching entries.		
User / Device Status	Not Filtered	Filtered	Status Filters 'Not Filtered' includes all users/devices in the displayed results. 'Filtered' hides all users/devices from the displayed results.

Field	Description		
			Status Unknown: the targeted user has not made a call since the Application Server was started up.
			Status Inactive: the targeted user has not made a call for more than five minutes.
			Status Idle: the targeted user has made a call within the last five minutes.
			Status Active: the targeted user is on a call but recording has not been initiated.
			Status Record: the targeted user is on a call and recording has been initiated.
Call Status	INACTIVE (user is not on a call)		
	RINGING		
	ACTIVE (the call is being recorded)		
	ACTIVE (the call is not being recorded)		
Call Info		<p>Click the icon to launch the Call Detail screen in order to view additional call data.</p> 	
Call Notes		Add a tag - live call or post call. Tags are defined by the system administrator and can be applied during a call or post call.	
Pause / Resume Recording		Select to pause the recording (for PCI compliance).	

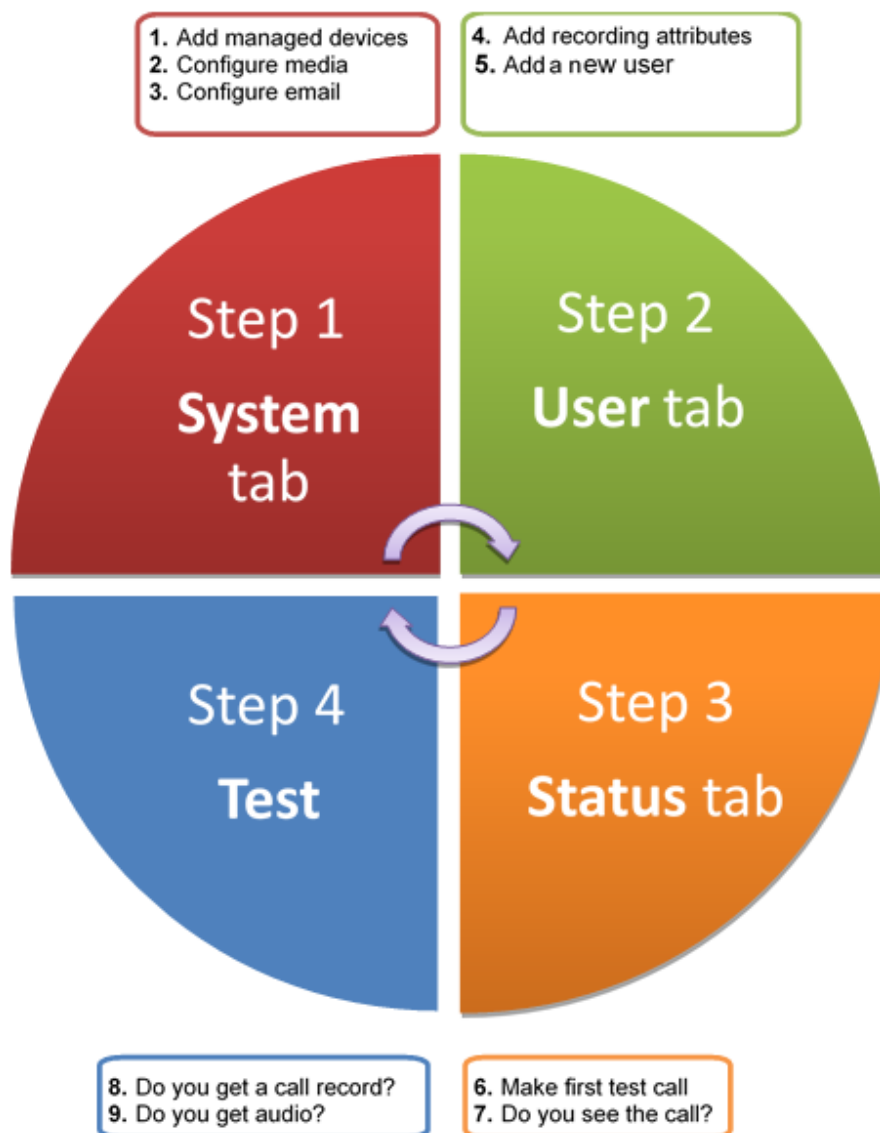

Field	Description	
		Select to Resume the recording (for PCI compliance).
ROD / SOD		ROD (Record on Demand) Click to start recording from the current point in the call. The audio file will contain audio from the trigger point on.
		SOD (Save on Demand) Click to save the recording of the complete call.
Live Monitor		Users with 'Live Monitoring' privilege can listen to active calls by clicking the Live Monitor microphone button. The following popup player launches: 
Page Navigation buttons	These are shortcuts to the beginning/end, previous page/next page of the displayed entries. The dropdown allows changing the number of entries per page.	

4 Performing Initial Configuration

The figure below shows the steps to take to perform initial SmartTAP 360° Live configuration (Step 1-Step 2) in order to record a call. Detailed instructions follow below it.

It's assumed SmartTAP 360° Live software components were installed on the servers necessary for your environment, and were configured based on the SmartTAP 360° Live Installation Guide.

Figure 4-1: Performing Initial Setup

➤ **To perform initial setup:**

1. Log in for the first time (see Chapter [Logging In](#) on page 15 for more information)
2. Configure media (see [Configuring Media](#) on page 68 for more information).
3. Configure email (see [Configuring Email Server Settings](#) on page 67 [Configuring Email Server Settings](#) on page 67 for more information).

4. Add a user attribute for recording purposes (see page [Managing Users](#) on page 105 for details).
5. Add a user (see under [Managing Users](#) on page 105Managing Users for more information).
6. Make sure the new user is assigned a recording profile (see under [Managing Recording Profiles](#) on page 116 for more information).
7. Make sure the user's recording attribute field is populated (for more information, see [Managing Recording Profiles](#) on page 116).

5 Testing the Initial Configuration

Testing the initial configuration and then troubleshooting it if necessary can be performed (step 3 and step 4 respectively, as shown in [Performing Initial Configuration](#) on page 25). The objective is to validate the configuration and the recording functionality.

After making sure recording is functioning correctly, continue to Chapter [Configuring Advanced Features](#) on page 29 to set up advanced features such as LDAP and Single Sign-On.

➤ To test the initial configuration:

1. Navigate to the Status page (**Status** tab > **Status** folder > **User Status**).
2. Make your first test call.
 - a. Do you see the call trigger recording?
 - b. Do you get a call record?
 - c. Does the record contain audio?

Making Sure a Recording is in Progress

This section shows how to make sure that a recording is in progress.

➤ To make sure that a recording is in progress:

1. Open the User/Device Status screen (**Status** tab > **Status** folder > **User Status**):

- Click  on the upper banner

-or-

- Click the **Status** tab > **User Call Status**

■ The icon indicates that a recording is in progress.

Listening to a Recording and Viewing a Video

This section shows how to listen to a recording and to view call video.

➤ To listen to a recording:

1. Click the **Calls** tab; the Search Calls screen opens.
2. In the Search Navigation screen (left side), enter the date range and select the type of Users and Devices.
 - Select either the Users/Devices or the Groups button. Selecting the Users/Devices option changes the display below to show a list of Users/Devices.
 - Selecting the Groups option changes the display below to show a list of Groups and Sub Groups (if the 'Search Sub Groups' option is selected).

3. Select one of more User/Devices or Groups by highlighting them in the list (see the notes on the Search Calls Navigation screen's field descriptions for how to select more than one User/Device or Group).
4. Click to start the search for calls matching the search criteria; the results are displayed in the Search Calls Results screen to the right.

5. Select the recording you wish to playback .
6. If the call is a video call type, select the 'Display Video' check box to display the call video as well.

7. Click the  button to start listening to the call or to watch the video.

6 Configuring Advanced Features

After performing initial setup and then testing it, n configure the advanced SmartTAP 360° Live features described in this section.

Viewing/Searching an Audit Trail

The Audit Trail feature allows the administrator to search the history of all user activity on SmartTAP 360° Live. The Audit Trail is searchable but cannot be edited or deleted. You can view / search the user changes made to the SmartTAP 360° Live database.

➤ **To view / search user activities:**

1. Open the Audit Trail screen (**System** tab > **Monitoring** folder > **Audit Trail**).

The System tab is only accessible to administrators assigned the Configure System option in their security profile.

Figure 6-1: Audit Trail

The screenshot shows the 'Audit trail' interface. On the left, under 'Selection criteria', there is a scrollable list of users: Adar, Tania; Alyil veedu dhruva, Fnu; Analytics User, Analytics User; Bauer, Eric; Broker, Analytics; Burke, Aemon; Campos, Jose; Carosella, Gino; Conlon, Tom; Da Silva, Sandy; Dutta, Debajyoti; EMEA, Oncall-1; EMEA, Oncall-2; Erps, Mike; Garg, Amrita; Groh, Gerald; Herberger, Steven; Honig, Menachem; Hopkins, Steve; Howell, Donald; Hunter, Daryl; Ilyaev, Ina(Inai); Johnson, Bob; Johnson, Johnson; Jones, Bob; Jones, Jones; Joseph, Liziya(Manually Added); Kitlaru, Yaniv; Kling, Brian; Makowski, Jerry; Marrocchi, Ulises (ulisesm); Mast, Danielle; Munoz, Fernando. On the right, there are input fields for 'From: 12/31/18' and 'To: 12/31/18', and a 'Search' button.

2. Select the desired users and date range (Use the table below as reference).

Figure 6-2: Audit Trail Query Result

The screenshot shows the 'Audit trail' interface with a query result table. The table has columns: Name, Action, Timestamp, and Description. The data shows multiple login and playback events for 'ST-Teams100' and 'User ST-Teams100@smarttap.onmicrosoft.com'.

Name	Action	Timestamp	Description
ST-Teams100	LOGIN	01/14/2021 11:05:58 AM	User ST-Teams100@smarttap.onmicrosoft.com successfully logged in.
ST-Teams100	LOGIN	01/14/2021 11:17:23 AM	User ST-Teams100@smarttap.onmicrosoft.com successfully logged in.
ST-Teams100	LOGIN	01/17/2021 02:11:53 PM	User ST-Teams100@smarttap.onmicrosoft.com successfully logged in.
ST-Teams100	LOGIN	01/17/2021 02:18:58 PM	User ST-Teams100@smarttap.onmicrosoft.com successfully logged in.
ST-Teams100	LOGIN	01/17/2021 02:21:46 PM	User ST-Teams100@smarttap.onmicrosoft.com successfully logged in.
ST-Teams100	PLAY_CALL_MEDIA	01/17/2021 02:22:02 PM	ST-Teams100 requested playback of media for call id 43. Elav
ST-Teams100	PLAY_CALL_MEDIA	01/17/2021 02:22:06 PM	ST-Teams100 requested playback of media for call id 43. Elav
ST-Teams100	PLAY_CALL_MEDIA	01/17/2021 02:23:46 PM	ST-Teams100 requested playback of media for call id 43. Elav
ST-Teams100	LOGIN	01/17/2021 02:28:11 PM	User ST-Teams100@smarttap.onmicrosoft.com successfully logged in.
ST-Teams100	LOGIN	01/17/2021 02:29:44 PM	User ST-Teams100@smarttap.onmicrosoft.com successfully logged in.

Table 6-1: Audit Trail

Field	Description
Selection criteria	Click to hide the Search area

Field	Description
	Click to show the  area
<list of users>	Select the user to view by clicking the user name; hold <ctrl> to select multiple users; hold <shift> and click the top user and the bottom user to select all users within a range.
From:	Select the date from which to search.
To:	Select the date to which to search.
	Click to perform the search and display the results.
Name	Sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Action	Sorted ascending/descending by clicking header up/down arrows. Default is 'All Actions'. Field entry displays only entries with matching drop down menu.
Timestamp	Time of day when entry was created
Description	If defined, the field entry displays only matching entries.
	Click the Excel icon to export Audit Trail.
<p>Navigation buttons under the search display:</p>  <p>Buttons are shortcuts to the beginning/end, previous/next page of the displayed entries. The drop-down list allows changing the number of entries that are displayed per page.</p>	

Exporting an Audit Trail

You can export the audit trail to an Excel file for accountability purposes.

➤ To export the audit trail:

1. Open the Audit Trail screen (**System** tab > **Monitoring** Folder > **Audit Trail**).
2. Select the User or Users to view and date range.
3. Click  to see the results.

4. Click the Excel  icon.

5. Click Open / Save to manage the Excel file.
6. Once opened, the following tabs can be seen:
- Tab #1 Search Criteria Details
 - Tab #2 Audit Trail Data

Managing Licenses

This section describes how to manage the SmartTAP 360° Live licenses. This interface displays data on the purchased and loaded license items:

- Targeted user licenses
- Concurrent recording licenses

Targeted User Licenses (Skype for Business)

The targeted user licenses enable SmartTAP 360° Live users to be assigned to recording profiles for different types of communication recordings in an enterprise. The following Targeted recording licenses can be configured:

- **Audio & IM Targets:** this license sets the number of users that can be assigned to a Recording Profile for recording Audio and Instant Messages. Audio Concurrent licenses (described below) are required to record these users calls.
- **IM Targets:** this license sets the number of users that can be assigned to a Recording Profile for recording Instant Messages only. Other types of user communications i.e. audio or video recordings are not available under this license.
- **Video & Audio & IM Targets:** this license sets the number of users that can be assigned to a Recording Profile for recording Audio and Video and Instant Messages. Video & Audio Concurrent Recording licenses (described below) are required to record these users calls.

- Video and Screen Sharing recording does not require a target user license. Only the concurrent recording license can be enabled for users with Audio& IM targets or Video & Audio & IM targets.
- Check with your AudioCodes representative for which types of content can be recorded.
- For Microsoft Teams deployments only Audio licenses are supported.

Concurrent Recording Licenses (Skype for Business)

Concurrent recording licenses determine the maximum number of calls that can be simultaneously recorded. Ideally the concurrent calls license should equal the maximum number of simultaneous calls that can be made by the targeted users. The following Concurrent recording licenses can be configured:

- **Audio Concurrent Recordings:** this license determines the maximum number of concurrent Audio recordings of users that are assigned to an Audio-enabled recording profile (Video disabled).
- **Video & Audio Concurrent Recordings:** this license determines the maximum number of concurrent Video and Audio recordings of the users that are assigned to Audio and Video enabled recording profile.
- **Video and Screen Sharing Concurrent Recordings:** this license determines the maximum number of concurrent Video and Screen Sharing recordings of users that are assigned to an audio or video recording profile.

➤ To view Managed Licenses:

1. Open the Licenses screen (**System tab > Monitoring Folder > Licenses**).

Figure 6-3: License Menu

Microsoft Teams Client Licenses

This section describes Microsoft Teams Client licenses.

Compliance Recording can be enabled on Microsoft 365 A3/A5/E3/E5/Business Premium and Office 365 A3/A5/E3/E5 users.

■ Targeted User Licenses:

- **Audio Targets:** This license sets the number of users that can be assigned to a Recording Profile for recording Audio. "Audio Concurrent" licenses (described below) are required to record these users calls.
- **All Included Targets:** This license sets the number of users that can be assigned to a Recording Profile for recording Audio and Video, Video and Screen Sharing and Instant Messages. "Audio & Video Concurrent Recordings" licenses (described below) are required to record these users calls

■ Concurrent Recordings:

- **Audio Concurrent Recordings:** This license determines the maximum number of total concurrent Audio recordings of users that are assigned to an Audio enabled recording profile (Video and Video and Screen Sharing disabled).
- **Audio & Video Concurrent Recordings:** This license determines the maximum number of concurrent Video and Video and Screen Sharing recordings of the users that are assigned to Video or Video and Screen Sharing enabled recording profile.

Last Updated Wednesday, December 9, 2020 12:59:00 PM

License	Total	In Use	Available	Max. Consumed*	Notification Threshold Value	Set/Modify Threshold Value
Audio Targets	4	3	1	3		
Audio Concurrent Recordings	4	0	4	0		
All Included Targets	2	0	2	0		
Audio & Video Concurrent Recordings	2	0	2	0		

Refresh

License Configuration Parameters

- **Total:** The total number of purchased licenses
- **In Use:** The number of licenses that are currently utilized reflects the number of recording enabled users or the number of user calls recorded at the time of the page refresh.
- **Available:** The number of licenses available to enable users for recording or to record concurrently.
- **Max Consumed:** The maximum number of concurrently used licenses to date. Each

counter can be manually reset by selecting the reset counter button adjacent to each license entry. The counter is reset after the Call Delivery server is restarted and the screen is refreshed.

Following reset, the value for "Max Consumed" is equal to the value for "In Use" for the selected entry.

- **The Notification Threshold Value:** this value is measured in terms of the number of licenses; zero implies that no notifications are sent. For example, if the Notification Threshold Value 3 is configured for the "Audio & IM Targets" item, when 3 or more licenses are used for this item, the alarm "Resource Threshold Exceeded" is generated. When the license usage falls below the threshold, the alarm "Resource Threshold Cleared" is raised. See also [Alarms](#) on page 39.

- **Set/Modify Threshold Value:** Set or modify the Threshold value by selecting the adjacent

 SUBMIT

button for each license item.

In addition, general license information is displayed on the left-hand side of the screen including the Sales Order Number, Product Key, Date Issued and Customer Name.

Viewing Managed Devices

SmartTAP 360° Live architecture comprises several services which together perform all tasks and provide all functionalities for the recorder.

Since any of the services required for an installation may not be in a single server, the initial administrator (admin) must configure the services for SmartTAP 360° Live to record calls.

A managed device other than of type 'Host' will register automatically with the application server. Such devices update their status by sending periodic heartbeats to the application server. Devices also update their connection status information whenever the connection state changes. A device of type 'Host' needs to be manually added to the application server in the Managed Devices screen. The Application server will periodically poll 'Host' type device to retrieve the device status information.

In a correctly setup deployment, all device types are added automatically, except for devices of type "Host". See [Adding a Device Manually to the Application Server](#) on page 38 [Adding a Device Manually to the Application Server](#) on page 38 for the procedure to add Host devices.

➤ To view managed devices:

- Open the Managed Devices screen (**System** tab > **Monitoring** Folder > **Managed Devices**):

Figure 6-5: Managed Devices

Managed Devices

Host

Managed Device Port

	Status	Device Name	Location	Device Type	Up Time	Down Time	Version	Address	Remove
1		127.0.0.1:161		Host	14 days 20 hours 8 minutes 32 seconds			127.0.0.1	
2		AC-MediaProxy@ST-CLUSTER-N1		Integration Specific	5 days 21 hours 24 minutes 8 seconds		4.3.0.9238	ST-CLUSTER-N1

20 1 (1 of 1)

Last updated: Mon Dec 31 12:06:26 IST 2018

- Use the table below as reference.

Table 6-2: Managed Devices Field Descriptions

Field	Description
Host	Host Name or IP Address of the managed device to add. By default, the type of this device is set as 'Host'.
Port	SNMP UDP Listening Port of the managed device to add.

Field	Description
Status	Indicates the status of the managed device.
	 Device status is UP: the device has registered and is sending heartbeats periodically at regular 30 second intervals.
	 Device status is UNKNOWN: the device has registered but has not yet send any heartbeat message.
	 Device Status is SETTLING: the device is in DOWN state and has started sending heartbeats again. If the device continues to send heartbeats without any timeout or failure for the settling period (two minutes by default), the status will change to green.
	 One of the connected devices is DOWN.
	 Device status is DOWN: the device stops sending heartbeat messages.
Device Name	Display Name of the Device. Sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries. Note: Clicking the Device Name link opens the control panel page for this device.
Device Location	Devices location information. Sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Device Type	Type of the device provided during registration. A manually added device has type 'Host'. In SmartTAP 360° Live, valid device types are as follows: Unknown; Host; Call Delivery-IP; Call Delivery-SIPREC; Media Server; Communication Server; Integration Specific; Health Monitor; Remote Transfer Service, Teams Bot and Media Delivery Sorted ascending/descending by clicking header up/down arrows. The dropdown only displays matching entries. 'Unknown' devices are devices unreachable by the Application Server's Web service.
Up Time	Time elapsed since the device status became UP.
Down Time	Time elapsed since the device status became DOWN.
Version	Version of the registered device.

Field	Description
Address	IP address or Host name of the registered device.
Remove	Delete button to remove managed device information from the system. An auto-registered device can only be deleted if its state is either 'DOWN' or 'UNKNOWN'
	Submit button to add a managed device of type 'Host' to the system.
Filtering	Typing in a column input field or selecting a value from a drop down in column headings will filter the table entries by the value typed or the option selected.

Inter-Components Communication

SmartTAP 360° Live inter-components communication status helps to quickly detect connection issues and to take the appropriate actions. Each managed device reports the status of its connections with other components in the system.

Figure 6-6: Inter-Component Communications

Adding a Device Manually to the Application Server

The Application Server's Web service manages all devices (software elements). It must be configured with one of the following software elements performing specialized tasks in the SmartTAP 360° Live environment:

- Call Delivery Server (required to record)

- Communication Server (required to record)
- Media Server (required to record)
- Host (required to monitor system health)

When the administrator adds a new software element on the local or remote physical/virtual server, the Application Server attempts to establish a connection with the new element. If successful, the Device Type in the main screen changes from 'Unknown' to the device type just added. Click the device name to navigate to the Control Panel for that device.

As mentioned in [Viewing Managed Devices](#) on page 35, in a correctly setup deployment only the Host server needs to be added manually to the Application server.

➤ **To add a device manually:**

1. Open the 'Managed Devices' screen.
2. Enter the Host IP address of the new device.
3. Enter the published Managed Device Port of the new device (see the table below).
4. Click Submit.

For a standalone SmartTAP 360° Live recorder, all managed devices reside on the same server and are associated with the local host or IP address.

Table 6-3: Managed Devices

Hostname of Device	UDP Port	Description
Host	161	Server Platform Host MIB

➤ **To make sure the device was added to the server:**

1. After adding a device, the new device is displayed in the list of devices.
2. Once the new device is discovered, 'Device Type' changes from 'Unknown' to the correct device type added.

Alarms

This section describes the Alarms History and Alarm Notification screens.

Filtering of the display can be done according to date range and sort records according to name, description, source, summary and details.

Alarm Notifications

SmartTAP 360° Live features the ability to automatically send email alarm notifications to selected network administrators. The notification sent is based on the type of alarm generated by the system.

➤ To configure alarm notifications:

1. Open the View/Modify Alarm Notifications screen (**System** tab > **Alarms** Folder > **Notifications**).

Figure 6-8: View/Modify Alarm Modifications

View/Modify Alarm Notifications		
Alarm	Description	Modify
Link Down	A physical communication link has been lost.	
Link Up	A physical communication link has been restored.	
Communication Up	Communication between processes has been restored.	
Communication Down	Communication between processes has been lost.	
Resource Threshold Exceeded	The threshold of a limited resource has been exceeded.	
I/O Error	Disk or Peripheral Failure.	
System Resource Error	Failed to allocate system resource.	
Resource Threshold Cleared	The usage of a limited resource has been reduced below the threshold value.	

2. Click Modify  on the Alarm that you wish to modify.
3. Move the users to receive Email Notifications from the 'Non Recipients' side to the 'Recipients'.
4. Use the assignment keys to assign recipients of the alarm notifications:
 - Click the >> or << keys to move all users between the Non-Recipients and the Recipients list.
 - Select users and then use the < or > keys to move users between the Non Recipients and Recipients lists (use the CTRL key to select multiple users).
5. Click SUBMIT.

Figure 6-9: Link Up Alarm Notification

6. Use the table below as reference to the Viewing/Modifying Alarm Notifications screen.

Table 6-4: Viewing/Modifying the Alarm Notifications Screen

Field	Description
Alarm	Alarm name. Sorted ascending/descending by clicking header up/down arrows. If defined, field entry displays only matching entries.
Description	Alarm description. Sorted ascending/descending by clicking header up/down arrows. If defined, field entry displays only matching entries.
	Click to modify the list of users receiving this alarm notification.

Table 6-5: List of Alarms and Possible Causes with Recommended Remedial Action

Alarm	Explanation	Remedial Action
Link Up / Down	Caused by loss of signaling with network or passive tap connection	Check the host PC network connections. Analog or Digital Station Integration – Make sure the cable is properly connected to the device.
Communication UP / Down	Communication between SmartTAP 360° Live software elements has been lost	<ul style="list-style-type: none"> Run system_profile.exe (..\AUDIOCODES\Tools) Contact AudioCodes Support with the notification received. ✓ If the notification is the result of a

Alarm	Explanation	Remedial Action
		<p>failure of the Application Server polling the managed devices, it will indicate the address and port of the managed device to which it was trying to communicate.</p> <p>✓ If it is from a trap from another device, the trap OID will indicate between which devices the specific failure occurred.</p>
Resource Threshold Exceeded	The peak number of concurrent calls has exceeded the number of available licenses.	<p>SmartTAP 360° Live has insufficient purchased recording licenses to record the peak number of concurrent calls.</p> <p>You can also activate a warning notification alarm when a configured threshold value for a specific license parameter is reached (see Managing Licenses on page 32 Managing Licenses on page 32).</p>
	The media storage location threshold has been reached.	<ul style="list-style-type: none"> ■ Check the resource threshold setting. It's possible that sufficient storage still remains and that the threshold needs to be adjusted. ■ For additional media files (recordings) add additional storage capacity to the file server. This file server is external to SmartTAP 360° Live.
I/O Error	Sent if the Media Server fails to write media to disk.	<ul style="list-style-type: none"> ■ Check the Media Server and Media Server Transfer services and logs. Media Server Transfer is the bulk transfer of recordings from a local (branch) location to a centralized location. ■ Make sure the appropriate permissions were provided to SmartTAP 360° Live. ■ Check if the permissions changed. ■ Check the Media storage drive for possible disk failures.
System Resource Error	Occurs when the Media Server fails	<ul style="list-style-type: none"> ■ Run system_profile.exe (... \AUDIOCODES\Tools) and contact

Alarm	Explanation	Remedial Action
	to bind to a port.	<p>AudioCodes Support.</p> <ul style="list-style-type: none"> Make sure UDP port range 40000-45000 is available.

The figure below shows alarm notifications for the 'Resource Threshold Exceeded' notification; sent when the system utilization has exceeded the maximum number of available licenses. The 'Resource Threshold Cleared' notification is sent when the system license utilization falls back within the threshold limit.

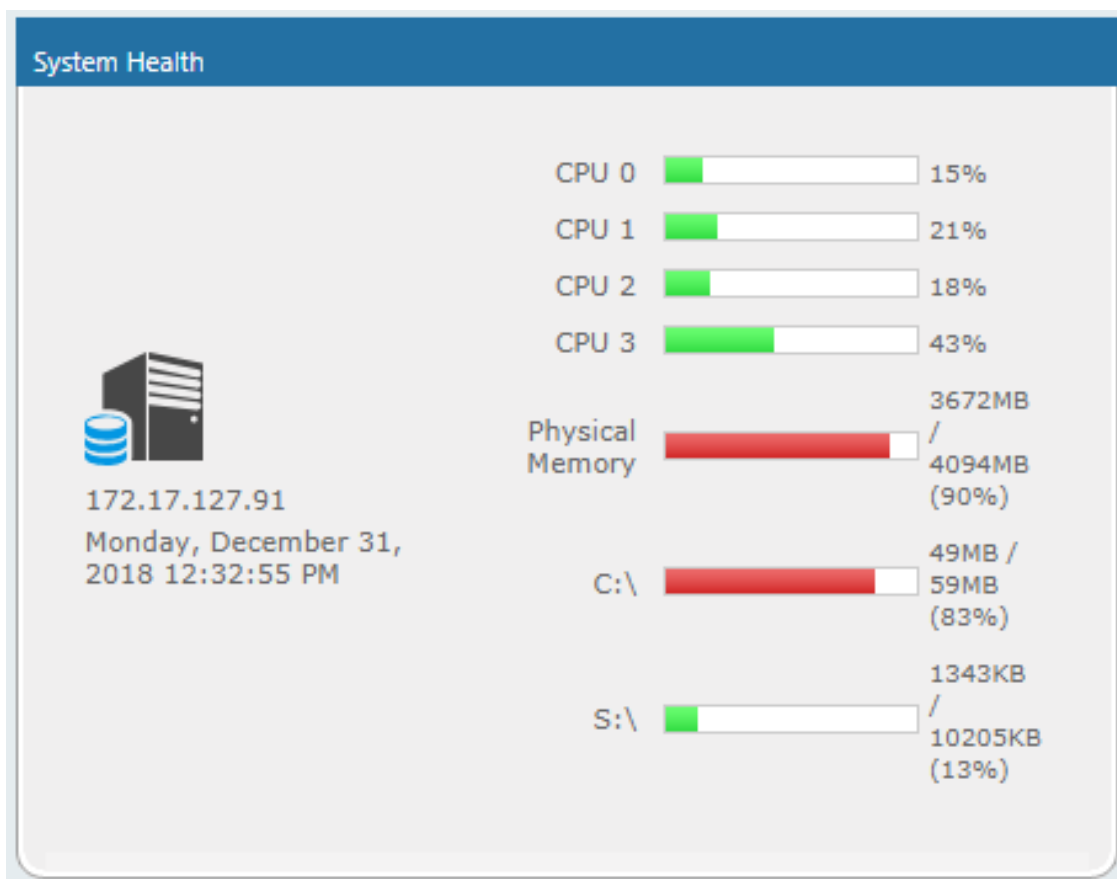

Figure 6-10: View/Modify Alarm Notifications

View/Modify Alarm Notifications		
Alarm	Description	Modify
Link Down	A physical communication link has been lost.	
Link Up	A physical communication link has been restored.	
Communication Up	Communication between processes has been restored.	
Communication Down	Communication between processes has been lost.	
Resource Threshold Exceeded	The threshold of a limited resource has been exceeded.	
I/O Error	Disk or Peripheral Failure.	
System Resource Error	Failed to allocate system resource.	
Resource Threshold Cleared	The usage of a limited resource has been reduced below the threshold value.	

Monitoring System Health

The health of the SmartTAP 360° Live server is based on the host platform MIB. The System Health screen shown in the figure below displays the current health statistics of the server.

Figure 6-11: System Health

Windows Event Log

By default alarms and events raised on SmartTAP 360° Live are sent to the OVOC server as SNMP traps (see [Configuring OVOC Connection](#) on page 102) and are not sent by default to the Windows Event Log.

➤ To enable sending SmartTAP 360° Live alarms and events to the Windows Event Log:

1. Using a text editor, open the MainAgent configuration file "System.config" from directory ...MainAgent\Config.
2. Search for string "useEventViewer="false" and change to "useEventViewer="true".
3. Save changes and exit.
4. Restart the **OVOC Main Agent** service.

Figure 6-12: useEventViewer

```

107 localSnmpPort="161"
108 Description: Local SNMP port to receive requests from EMS
109 DefaultValue=161

- Search "is_local_host" (0 hits in 0 files)

When the Alarm Notification is written to the Windows Event Log, the Application Server creates two types of log files under “Applications and Services Logs” category in the Windows Event Log:

- **SmartTAPCalls:** this log includes all alarms and events related to call recording that were logged while running according to the logging configuration. The source attribute of these alarms is “SmartTCalls” and Event ID=<EventID> <Task Category> where 1-Alarm and 2-Event.
- **SmartTGeneral:** this log includes all other alarm and events that were logged while running according to the logging configuration. The source attribute of these alarms is “SmartTGeneral” and Event ID=<EventID> <Task Category> where 1-Alarm and 2-Event .

Figure 6-13: Event Viewer SmartTCalls

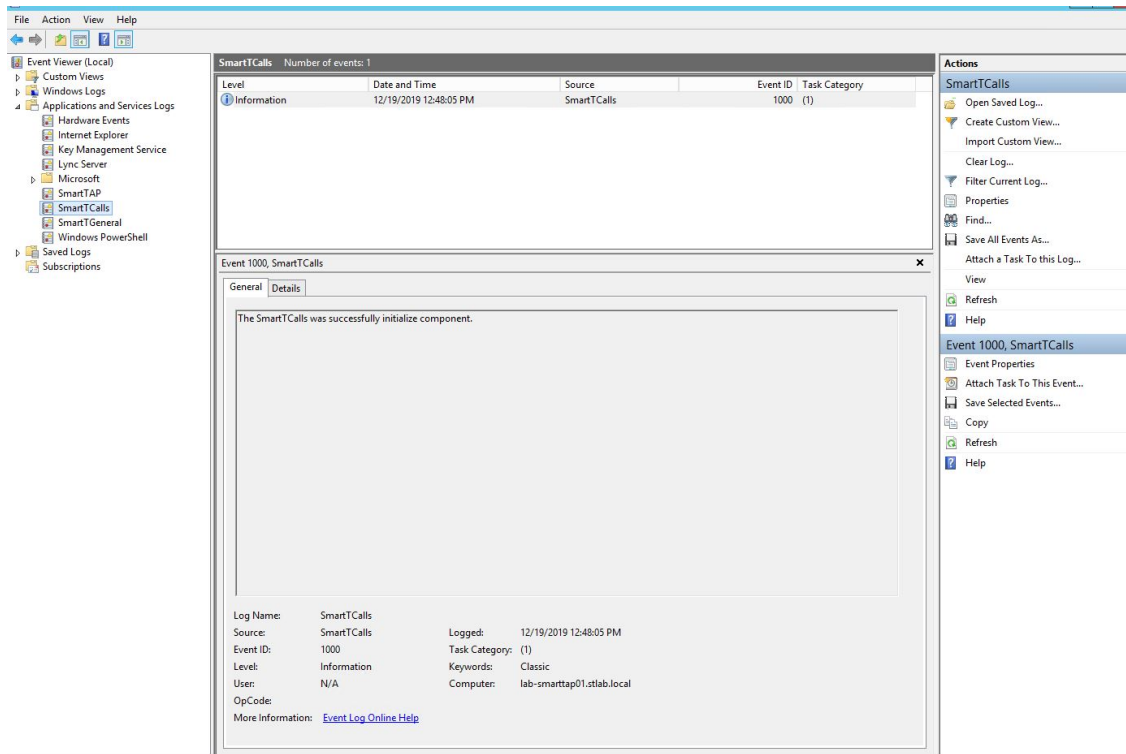

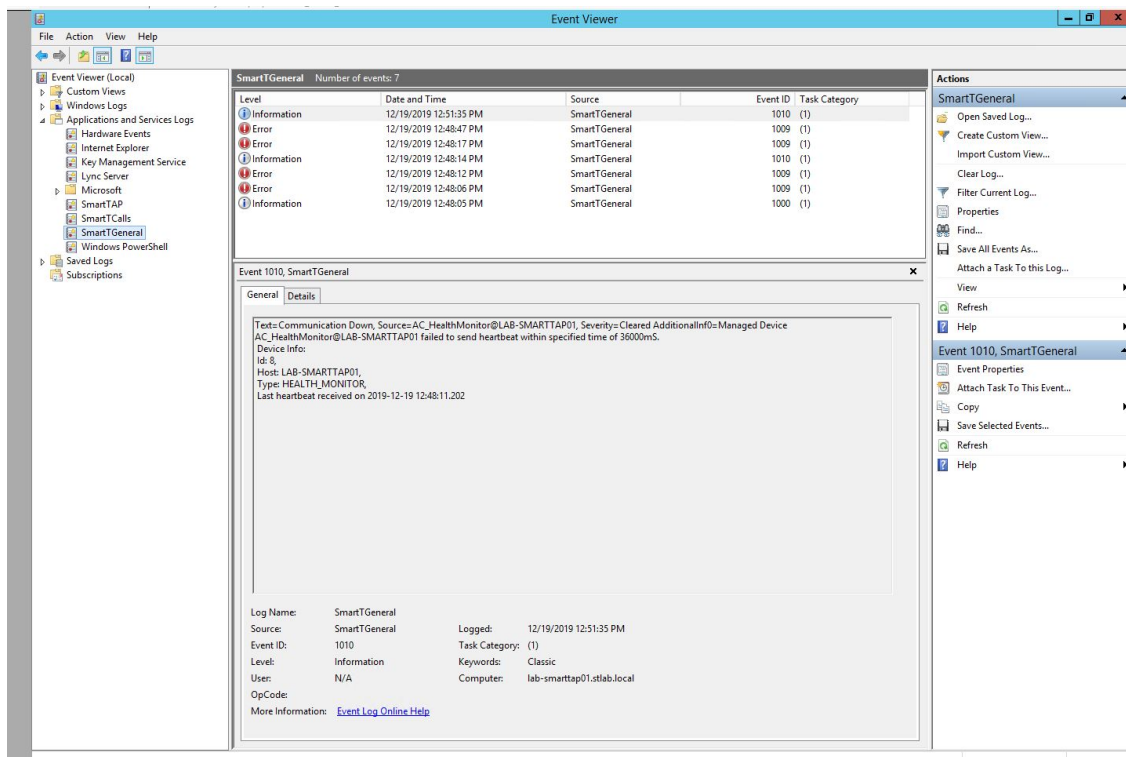

Figure 6-14: Event Viewer SmartTGeneral

SCOM Integration

The SmartTAP 360° Live platform can be configured to generate the event monitor or send an alert based on a Windows event to the Microsoft SCOM platform. In case of SmartTAP 360°

Live, the monitored events source should be configured to “SmartTAP 360° Live” with Event ID 4096. For more information, see the following link: [Monitor Event Log](#)

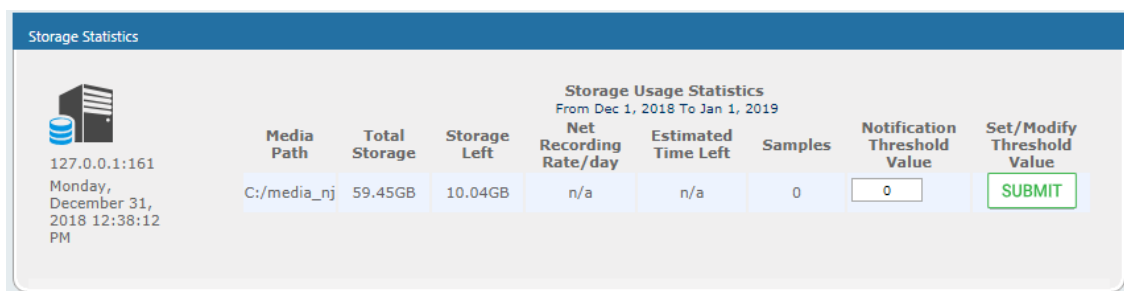

Monitoring Storage Statistics

The SmartTAP 360° Live server estimates the number of days remaining until the recordings storage device reaches its maximum. The Storage Usage Statistics screen shows parameters used for this calculation. The calculation not only takes account of size and rate of the new recordings, but also the size and rate for which older recordings (that exceeded the retention value) are deleted. The notification threshold allows the network administrator to set up an automated notification to trigger when the number of days of storage remaining falls below the Notification Threshold Value.

- This functionality is not supported for all types of Azure storage.
- For Microsoft Teams deployments, only Audio Licenses and total Audio Concurrent recording licenses are supported.

Figure 6-15: Storage Statistics Screen

Use the table below as reference.

Table 6-6: Storage Statistics Fields

Field	Description
Media Path	Location in which the recordings are stored.
Total Storage	The total storage available for the media. Note: the drive's total storage is assumed. The storage reflects all media types (audio and video).
Storage Left	The current value of the remaining storage left for media.
Net Recording Rate / day	The net average storage space consumed per day, calculating the net between the recording rate and the deletion (retention) rate.
Estimated Time Left	Estimated time remaining before the Media Path is full.
Samples	Number of days used to calculate the Net Recording Rate.

Field	Description
Notification Threshold Value	Specify the % of space consumed before an alarm is triggered. > % value consumed = send alarm. Default: 0 (never notify).
	Apply changes

➤ **To receive the 'Resource Threshold Exceeded' alarm:**

1. Configure the Notification Threshold value:
 - Access the Storage Usage Statistics (**System** tab > **Monitoring** Folder > **Storage Statistics**).
 - In the Storage Statistics screen, change 'Notification Threshold Value' to the number of days, to send notification, before the disk is full.
 - Click  to submit changes.
2. Select the users who will receive the automated notification when the threshold is crossed:
 - Access the View/Modify Alarm Notifications (System tab > System Folder > Notifications menu).
 - Click  on the 'I/O Error' Alarm.
 - Move the users to receive Email Notifications for this alarm from the 'Non Recipients' side to the 'Recipients'.
 - Click  to submit changes.

Using Call Tagging

Call Tagging can be implemented by either the network administrator defining tags allowing users to enter data manually on their screen during the course of a call, or via a third-party application. Calls can be tagged with relevant information and subsequently used for quick and easy retrieval. Call Tagging provides the following benefits:

- Categorizes calls by type or outcome, making searches easy (i.e., Malicious, Account ID, etc.). By default, the Notes tag is already defined within the system.
- Saves money by dramatically reducing the time to find individual recorded calls.
- Improves internal processes by using the call tags as searchable data fields for other applications.

Table 6-7: Call Tagging Fields

Field	Description
Tag Name	User-defined meaningful name to be displayed to administrators when selecting a tag from the management interface.
Tag Description	Administrator-defined description of the purpose of the tag..
Input Type	Define the field type for the tag: <ul style="list-style-type: none"> ■ None (Tag requires no administrator input) ■ Text (the 'Notes' field supports a maximum of 256 characters) ■ Boolean (Select/clear the checkbox: Yes / No or True / False) ■ Select_One (Define a list of options for the administrator to choose from, i.e., Excellent, Very Good, Good, Poor)
Allow Private	Allows an administrator to add the tag as private. Once tagged as private, only the specific administrator account will be able to view the tag.
	Applies changes.
	Cancels changes.

Adding a Call Tag

This section describes how to add a new call tag.

➤ To add a new Call Tag

1. Open the Call Tagging screen (**System** tab > **System** folder > **Call Tagging** > **Add Tag**).

Figure 6-16: Add Call Tag Screen
Table 6-8: Call Tagging Fields

Field	Description
Tag Name	Administrator-defined Tag name. Enter the tag name to the filter list.
Tag Description	Administrator-defined description of the purpose of the tag, to expedite management efficiency. Easily sorts column A-Z or Z-A.
Input Type	<p>Tag Type:</p> <ul style="list-style-type: none"> ■ None (Tag requires no user input) ■ Text (the 'Notes' field supports a maximum of 256 characters) ■ Boolean (Select/clear the checkbox: Yes / No or True / False) ■ Select_One (Define a list of options for the user to choose from, i.e., Excellent, Very Good, Good, Poor) <p>Mask (Use with Text Tag Types):</p> <p>May be defined for Text input type. If defined, the tag value must conform to the MASK. If undefined, the tag value can be any combination of printable characters:</p> <ul style="list-style-type: none"> * (Any printable character) # (Must be a digit: 0-9) A (Must be a letter: A-Z, a-z) \$ (Must be alpha or numeric: A-Z, a-z, 0-9) \ (Following character is a fixed literal character) ' ' (All characters within single quotes are a fixed literal string) <p>For example, the mask for a tag with the format 'Sales-#####A\$ will</p>

Field	Description
	accept user inputs like Sales-1234567QA OR Sales-9876543P2, etc.
	Click to view tag details.
	Click to delete tag.
SUBMIT	Apply changes.
CANCEL	Cancel changes.

Viewing / Deleting a Call Tag

The View / Delete Call Tags screen below indicates how to view and/or delete a call tag.

Figure 6-17: View/Delete Call Tags Screen

View/Delete Call Tags					
Tag Name	Tag Description	Input Type	Input Format	View	Delete
Note	Notes about the call.	TEXT			
Company	Company Name	TEXT			
Malicious Call	Malicious Call	NONE			
Account ID	Customer Account ID	TEXT	AA-'#####		
Follow Up	Requires Follow Up	BOOLEAN			
Feedback	Customer Feedback	SELECT_ONE	[Great, Poor, Good, Very Good]		
Test	Test	TEXT			
Service Request	Ticket ID Number	TEXT	'SR#''#####		
Sales Order	Sales Order Number	TEXT	'SO#''#####		
Bus Dev	Interop Partner	NONE			
File	File related to the call	TEXT			
Content	Notes about the call.	TEXT			
Subject	Notes about the call.	TEXT			
Participants	Notes about the call.	TEXT			
ActionItem	Notes about the call.	TEXT			
text	Notes about the call.	TEXT			
Title	Notes about the call.	TEXT			
Participants	Notes about the call.	TEXT			
Listening Reason	Reason why a user played a call	TEXT			
guy	test	BOOLEAN			

Assigning Values to a Call Tag and Applying to Call

This section describes how to apply a call tag to a call.

➤ To apply a call tag:

1. Search for call records (as described in [Searching for Calls](#) on page 142)

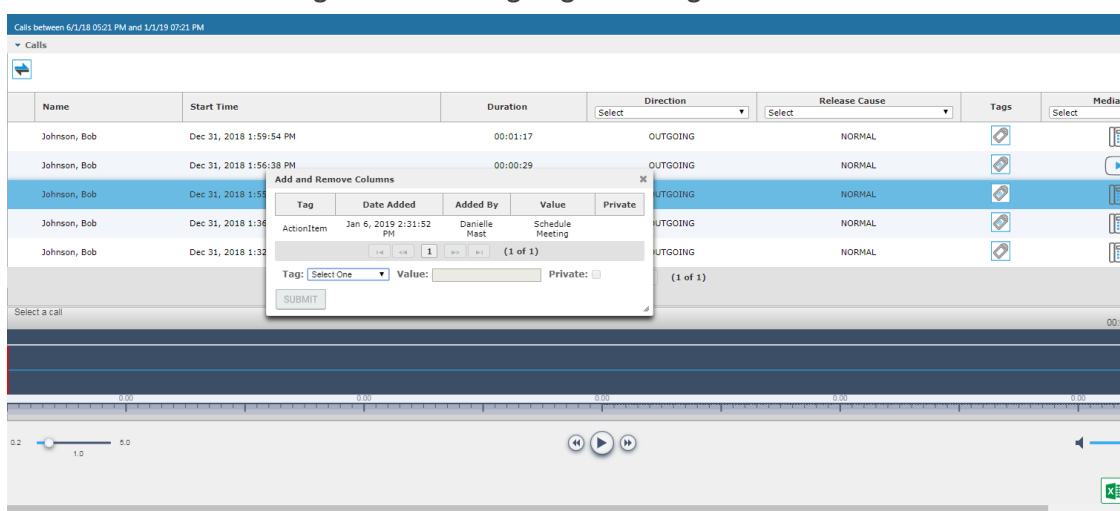

2. Select the call record to tag and ensure that the Tags column is displayed.
3. Double-click the Tags icon in the call record.
4. In the Tag field, select the type of tag that you wish to add and enter the desired value in the Value field.
5. Select the Private check box to list a personal reminder (only visible to the person defining the tag).
6. In the Value field, enter the text note that you wish to assign to the tag. In the example below “Schedule Meeting” (see highlighted in the figure below).
7. Click .

Figure 6-18: Assigning a Call Tag

Generating and Loading HTTPS Certificates

SmartTAP 360° Live server by default operates in non-secure (HTTP) mode. This section describes how to optionally implement SSL/TLS (HTTPS) for the following:

- Securing the connection between your Web browser and the SmartTAP 360° Live server
- Digitally signing audio files

SmartTAP 360° Live supports HTTPS/TLS 1.2.

Browser Connection Certificate Requirements

The certificate issued should contain the SAN (Subject Alternative Name) extension field, populated with all the correct URLs used to refer to the AS server:

- The FQDN (Fully Qualified Domain Name) of the AS server
- The Hostname (short server name, sans domain)
- The public IP of the AS server

- Any other CNAME used to refer to the AS server

In addition, ensure the following:

- All SAN entries are resolvable via the DNS configured on participating servers/workstations. Make sure the “DNS Suffixes” IPv4 setting is configured correctly.
- Whenever the network is installed with Microsoft Enterprise CA (as opposed to Microsoft Standalone CA), the Domain’s root CA certificate is automatically distributed to all domain member servers and workstations. No further action is required.
- Servers/Workstations that are not members of the forest where Microsoft Enterprise CA is installed, and house SmartTAP 360° Live components or used to manage SmartTAP 360° Live via browser, should have the root CA certificate imported into Windows’ “Trusted Root Certificates” store.
- When using 3rd party Certificate Management Suite to self-issue a private certificate chain (as opposed to using a Global CA to issue a Global Certificate), the root CA certificate and intermediate certificates should be imported to certificate local store (Root certificate to 'Trusted Root Certificates', Intermediate certificate to 'Intermediate certificates') on all servers where SmartTAP 360° Live components reside, and all computers used to manage SmartTAP 360° Live via its web interface.

Step 1: Generate Certificate Signing Request (CSR)

To obtain a certificate, first generate a CSR (Certificate Signing Request) from the SmartTAP 360° Live server. A CSR is an encoded file that provides you with a standardized way to send the necessary details to a trusted authority in order to have the certificate created. When you generate a CSR, the software prompts for the following information - common name (e.g., www.example.com), organization name, location (country, state/province, city/town).

- The CSR is listed in the Certificate list as a self-signed certificate if you choose not to get a signed certificate from a trusted authority.
- To create a CSR, SmartTAP 360° Live will automatically use Key type = RSA, Key size = 2048 and Cryptographic Hash = SHA-256.

➤ **This section shows how to generate a CSR. To generate a CSR:**

1. Under the **System** tab, select **Create Signing Request**.

Figure 6-19: Certificate Signing Request Screen

2. Use the table below as reference when defining the fields.

Table 6-9: Certificate Signing Request Screen

Field	Description
CSR Alias	Internal name associated with the CSR request.
Common Name (CN)	Full hostname=FQDN (consists of hostname + domain name).
Subject Alternative Name (SAN)	<ul style="list-style-type: none"> ■ Email: Indicates the email address of the organization ■ DNS: Indicates the name of the organization's DNS server ■ IP_ADDRESS: Indicates the IP address of the organization ■ URL: Indicates the URL of the organization's host server
Business Name / Organization	The legally registered name of your organization/company.
Department Name/ Organization Unit	The name of your department within the organization (frequently this entry will be 'IT', 'Web Security', etc.).
Town / City	The city in which your organization is located.

Field	Description
Province, Region, County or State	The Province, Region, County or State in which your organization is located.
Country	The country in which your organization is located. The following list of country codes is provided as a reference: http://www.digicert.com/ssl-certificate-country-codes.htm
Email	This field is optional..
Public Key	Created automatically by SmartTAP 360° Live.

It's inadvisable to abbreviate any information except for the country codes (i.e., enter New Jersey rather than NJ), to make sure there are no issues when you send the CSR to a trusted authority in order to generate the certificate, else it may be rejected.

- Click **SUBMIT**; the CSR is automatically available for download from the browser.
- Save the 'filename.csr' file and send it to the trusted authority.

Go to the View/Modify Certificate List to upload the official certificate from the trusted authority, in order to continue.

Viewing/Modifying the Certificate List

Figure 6-20: Viewing/Modifying the Certificate List

View/Modify Certificate List

Table 6-10: Viewing/Modifying the Certificate List

Field	Description
	Import signed Certificate 'filename.cer' from trusted authority
	Export Certificate to file to the local machine 'filename.cer'
	View Certificate

➤ **To import a certificate:**

1. Open the View/Modify Certificate List page (**System** tab > **Certificates** folder > **View/Modify Certificate List**).
2. Click the  **Import** icon and then the Browse button  to navigate to the location of the appropriate certificate file: 'filename.cer'

Figure 6-21: Import Certificate

3. Once selected, click the **Upload** link.
4. Once the upload completes, you should see a success message in the 'Command Execution Results' area.

• *Certificate for alias smarttap recorder successfully uploaded.*

➤ **To export a certificate:**

1. Open the View/Modify Certificate List page (**System** tab > **Certificates** folder > **View/Modify Certificate List**).
2. Click the  **Export** icon; the Certificate should now be available for download to the local PC.

➤ **To view a certificate:**

1. Open the View/Modify Certificate List page (**System** tab > **Certificates** folder > **View/Modify Certificate List**), click the  **View** icon.

```

Step 2: Load Certificates

Once certificates are available, load them to secure the connection between a Web browser and the SmartTAP 360° Live server and for securing digital files.

Loading Web Browser Certificate

This section describes how to load the certificate to secure the connection between your Web browser and the SmartTAP 360° Live server.

➤ To load the Web browser certificate:

1. Open the HTTPS page (**System** tab > **Web** folder > **HTTPS**).

Figure 6-23: HTTPS Certificate

HTTPS Certificate

Certificate smarttap.meetinginsights.net ▾

SUBMIT **CANCEL**

- From the Certificate drop-down list, select the certificate that you wish to load and click

SUBMIT

- Restart the SmartTAP 360° Live server.

Loading Digital Files Certificate

This section describes how to load to certificate that you wish to secure digital recording files.

➤ **To load the digital files certificate:**

- Open the Digital Signature page (**System** tab > **Media** folder > **Digital Signature**).
- Select the appropriate certificate from the Certificate list box.

- Click **SUBMIT**.

Figure 6-24: Digital Signature

Engineering Calls	365	DELETE_CALLS_AND_EVALS	365	
NCR 30 Days	NCR Support	DELETE_CALLS_AND_EVALS	30	
New Employee	test	DELETE_CALLS_AND_EVALS	7	
Keep Recordings	Don't delete recordings	KEEP_CALLS_AND_EVALS	0	
<div> 20 ▼ << 1 >> (1 of 1) </div>				

If a user 'optionally' chooses to add a Digital Signature during the download process, the configured certificate is used to digitally sign the audio file. The SmartTAP 360° Live Digital Signature file properties add-on must be installed on the local user PC to properly view the digital signature in the downloaded audio file.

Once installed, the Digital Signatures tab appears in the file properties of the downloaded audio recording. Click it to view the certificate and make sure it's from a trusted source. The certificate must be installed on the local PC in the Trusted Root authority.

Figure 6-25: Digital Signature Details

For instructions on how to install the add-on, refer to the *SmartTAP 360° Live Installation Guide*.

Configuring Call Retention

Call retention is the number of days to keep recordings in storage. Default: 0 indicates that recordings are never deleted. Use the default with caution since eventually the storage location will be completely consumed. To meet business requirements, it's highly recommended to set the retention value to a positive number.

SmartTAP 360° Live deletes calls that exceed the retention period once a day. A network administrator with appropriate security profile credentials has the option to add / modify retention policies.

Figure 6-26: Call Retention Screen – Add Retention Policy
Table 6-11: Call Retention Screen

Field	Description
Call Retention Period (in days)	The number of days before automatically deleting recordings. A value of zero (0) indicates that recordings are never deleted.
Evaluation Retention Rules	Deletion rules for recordings with associated evaluations that exceed the Call Retention Period.
SUBMIT	Applies the changes.

The Evaluation Retention Rules determine whether recordings older than the retention period are deleted, based on whether there are evaluations associated with the recordings to delete.

Table 6-12: Evaluation Retention Rules

Rule	Description
Call Retention Evaluation Rules	The Retention Evaluation options set the rules for keeping and/or deleting calls used in evaluations, as well as evaluations themselves.
Delete Calls and Evaluations	Evaluations based on calls subject to retention will be deleted along with the calls.
Delete Calls, Keep Evaluations	Evaluations will be kept but calls will be deleted. Evaluation-call relationship will no longer exist.
Keep Calls and Evaluations	If an evaluation is associated with a call, both the call and the evaluation will be permanently kept.

➤ **To add a new retention policy:**

1. Open the Call Retention screen (**System** tab > **Retention** folder > **Add Policy**).
2. Enter the policy name (i.e., Agent, Sales, etc.).
3. Enter a description to describe who / what the policy applies to.
4. Enter the value for the Call Retention Period.
5. Select the appropriate 'Evaluation Retention Rule' assuming Evaluation is enabled.
6. Click  to submit changes.

➤ **To view / modify a retention policy:**

1. Open the Call Retention screen (**System** tab > **Retention** > **View / Modify Policies**).
2. Click Modify  for a specific policy and modify the necessary fields.
3. Click  to apply changes.

Figure 6-27: View / Modify Retention Screen

View/Modify Retention Policies				
Name	Description	Evaluation Retention Rule	Days	Modify
Default	Default Retention Group	DELETE_CALLS_KEEP_EVALS	365	
British Columbia	90 Days	DELETE_CALLS_AND_EVALS	90	
Energy calls	365	KEEP_CALLS_AND_EVALS	365	
One Year	Hold Call for One Year	DELETE_CALLS_AND_EVALS	365	
Engineering Calls	365	DELETE_CALLS_AND_EVALS	365	
NCR 30 Days	NCR Support	DELETE_CALLS_AND_EVALS	30	
New Employee	test	DELETE_CALLS_AND_EVALS	7	
Keep Recordings	Don't delete recordings	KEEP_CALLS_AND_EVALS	0	

20 ▼ <=< << 1 >> >= (1 of 1)

Save on Demand Call Retention

This feature enables the recording of a Save on Demand call after the call is no longer active. Such a call can be recorded after an elapsed time period of up to 10 minutes. By default, this parameter is set to 0 (a Save on Demand call cannot be recorded after it is no longer active).

This feature is designed to prevent hoax callers from compromising the security and integrity of the Enterprise or Call Center.

➤ **To configure a time elapse for the recording of Save on Demand calls:**

1. Open the SOD Configuration screen (**System** tab > **Retention** folder > **Save on Demand**).
2. Configure the SOD Threshold value in seconds (up to 10 minutes-600 seconds)

Figure 6-28: SOD Configuration

Configuring System Settings

Under 'System Settings', the administrator can configure interfaces pertaining to services or devices that are external to the system. From this folder, the administrator can configure the following:

- Digital Signature to ensure that an electronic document (e-mail, spreadsheet, audio file, etc.) is authentic.
- SMTP interface to allow the SmartTAP 360° Live server to send outbound emails
- LDAP interface to allow SmartTAP 360° Live to use Active Directory users, groups, and security profiles
- Media storage location which may be stored on a network device
- End-user Web timeout

Configuring a Digital Signature

A digital signature is a way to make sure that an electronic document (e-mail, spreadsheet, audio file, etc.) is authentic. Authentic means that you know who created the document and that it was not altered in any way since that person or system downloaded it.

Select the appropriate certificate to use from the dropdown list. To generate a valid certificate, see [Generating and Loading HTTPS Certificates](#) on page 53.

Figure 6-29: Digital Signature

The screenshot shows a 'Digital Signature' configuration window. It has a blue header bar with the title 'Digital Signature'. Below the header, the word 'Certificate' is displayed next to a dropdown menu currently set to 'SmartTAP'. At the bottom right of the window, there are two buttons: a green 'SUBMIT' button and a red 'CANCEL' button.

Configuring Email Server Settings

SmartTAP 360° Live sends automated email notifications and allows users to send emails directly from the user interface. The Email Configuration screen configures the SMTP mail server settings.

➤ To configure email:

1. Open the Email screen (**System** tab > **Email** folder > **SMTP**).

Figure 6-30: Email Configuration

The screenshot shows the 'Email Configuration' screen. It has a blue header bar with the title 'Email Configuration'. Below the header, there are several input fields and checkboxes. On the left, the labels 'SMTP Server', 'SMTP Port', 'SMTP User', 'SMTP Password', and 'SMTP From' are aligned with their respective input boxes. The 'SMTP User' field contains the text 'admin', and the 'SMTP Password' field is masked with dots. On the right side, there are two checkboxes: 'Use Authentication' and 'Enable STARTTLS', both of which are currently unchecked. In the bottom right corner, there is a green circular icon with a checkmark and the word 'Submit' below it.

2. Enter the SMTP server information (provided by the SMTP administrator).
3. Use the table below as reference.

Table 6-13: Email Screen

Field	Description
SMTP Server	Hostname or IP address of the email server.
SMTP Port	TCP port of the email server.

Field	Description
SMTP User	Email user for authentication. By default, SmartTAP 360° Live will send emails from <a href="mailto:CallRecording@<SNMPServerDomain>.com">CallRecording@<SNMPServerDomain>.com . To make sure an email is sent from your domain, set the SMTP User to username@YourDomain.com . In addition, you can instead customize an email address from which to send emails in the SMTP From field (see below).
SMTP Password	Email user password.
SMTP From	Custom User-defined source email address (must be a valid email address defined on the SMTP server above). When this field is defined, all emails are sent from this email address instead of the default address described above in 'SMTP User'.
Use Authentication	Select the option if the SMTP server requires authentication.
Enable STARTTLS	Select the option when the SMTP server requires TLS.
	Applies the changes.

4. Apply changes (SmartTAP 360° Live tests the Email interface when the user clicks the  button to apply the changes).

- A successful configuration results in a message in green font in the command execution Results area.
- A failed configuration results in a failure message and code in red font in the command execution Results area.

Email must be set up for SmartTAP 360° Live to send email notifications, new user passwords, reset passwords, email recordings, email messages, etc.

Configuring Media

This section shows how to configure the items under the 'Media' folder shown in the figure below. Use the table below as a reference when accessing the items in the Media folder.

Table 6-14: Media Folder

Item	Description
Credentials	Sets the credentials to access the media recording locations. The

Item	Description
	credentials should be valid for all defined locations. See Configuring User Credentials below. See also Configuring User Credentials for Microsoft Teams Deployments on the next page.
Add Recording Location	Defines and adds a new media storage location. See Adding a Recording Location on page 76. See also Adding a Recording Location for Microsoft Teams Deployments on page 78
View/Modify Rec. Locations	Allows viewing and modifying an existing media location. SmartTAP 360° Live is shipped with a default local media storage location. A new location must be defined when media is not stored on the local drive. See Viewing and Modifying a Recording Location on page 81
Recording Format	Defines a recording format, e.g., encryption and compression. See Defining a Recording Format on page 82
Live Monitoring Location	The Live monitoring feature allows users to listen to calls in real time. See Configure Live Monitoring Location on page 83

Configuring User Credentials

This section shows how to define credentials for accessing shared resources. Whenever you add or modify the location for saving recording or live monitoring files, SmartTAP 360° Live verifies whether this location is accessible to the user defined in this procedure.

- You must define credentials before adding an SMB recording location (as described in [Adding a Recording Location](#) on page 76) otherwise the attempt to add the location will fail.
- If you are deploying with Microsoft Teams, see [Configuring User Credentials for Microsoft Teams Deployments](#) on the next page.

➤ To configure user credentials:

1. Open the credentials page (**System** tab > **Media** folder > **Credentials**).

Figure 6-31: Credentials

2. Use the table below as a reference when defining credentials.

Table 6-15: Credentials

Parameter	Description
Username	Specify a Username to use for accessing shared resources.
Password	Specify a Password to use for accessing shared resources.
Domain	Specify the authentication domain used to authenticate the username and password for accessing shared resources.

3. Click .

Configuring User Credentials for Microsoft Teams Deployments

This section describes how to configure credentials for accessing shared resources when media files are shared with a Microsoft Azure deployment implementing either a Microsoft Blob or Fileshare storage account. Whenever you add or modify the location for saving recordings, SmartTAP 360° Live verifies whether this location is accessible to the user defined in this procedure.

You must define credentials before adding an SMB recording location (as described in [Adding a Recording Location for Microsoft Teams Deployments](#) on page 78), otherwise, the attempt to add the location will fail.

➤ To configure credentials for Microsoft Teams deployments:

1. Open the credentials page (**System** tab > **Media** folder > **Credentials**).

Figure 6-32: Credentials

The image shows a web form titled "Credentials". It has three input fields: "Username" with the value "NULL", "Password", and "Domain". A green "SUBMIT" button is located at the bottom right of the form.

2. Use the tables below as references when defining credentials.

Table 6-16: Credentials for Accessing a Microsoft Azure SMB Fileshare Account

Parameter	Description
Username	Specify the Storage username defined for the Fileshare storage account.
Password	Specify the Storage Password defined for the Fileshare storage account.
Domain	Specify the Azure domain used to authenticate the username and password for accessing shared resources.

For extracting these credentials, see [Extracting User Credentials from Microsoft Azure Fileshare Account](#) on the next page

Table 6-17: Credentials for Accessing a Microsoft Blob Account

Parameter	Description
Username	Specify the storage account name where the Blob container was created.
Password	Specify the “access key” for the Blob storage account
Domain	Specify the Azure domain used to authenticate the username and password for accessing shared resources.

For extracting these credentials, see [Setting up Microsoft Azure Blob Storage Account](#) on page 74

Figure 6-33: Microsoft Azure Storage Credentials

3. Click .

Extracting User Credentials from Microsoft Azure Fileshare Account

To use Azure Fileshare storage as a media location, the following Azure information must be extracted:

- Azure Storage Address
- Storage Domain\Username
- Storage password
- Fileshare name

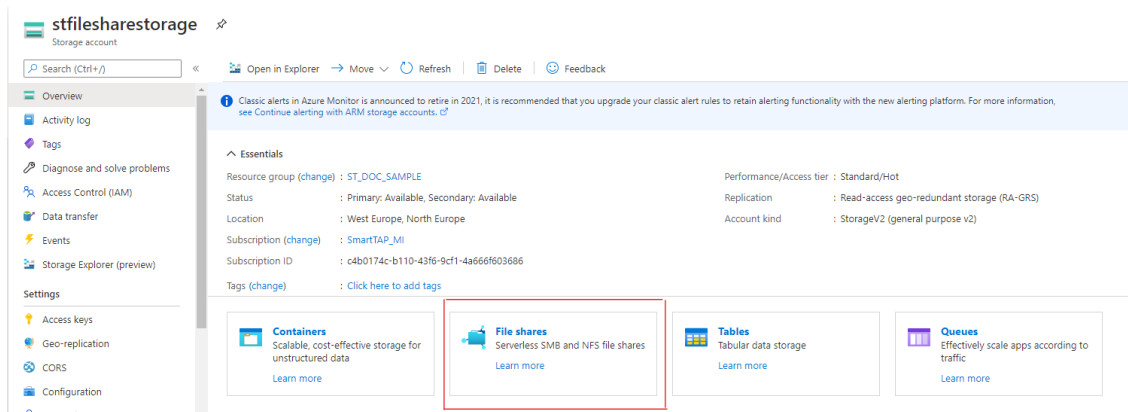

➤ To extract these credentials from Microsoft Azure:

1. Go to **Azure Portal** > **Storage Accounts**.

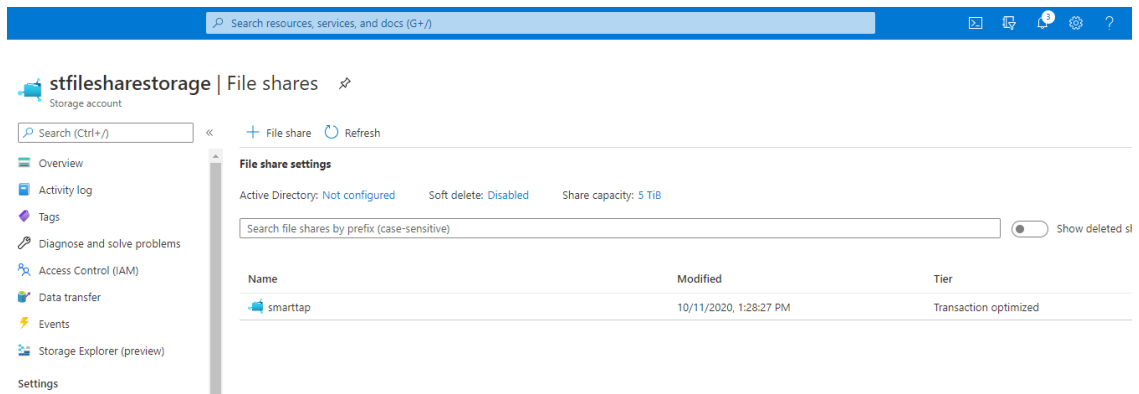

Figure 6-34: Storage Accounts

Name	Type	Kind	Resource group	Location
stfilesharestorage	Storage account	StorageV2	ST_DOC_SAMPLE	West Europe

2. Double-click the relevant storage account.

Figure 6-35: File Shares

3. Click **File shares**; the File Shares screen is displayed.

Figure 6-36: File Share Settings

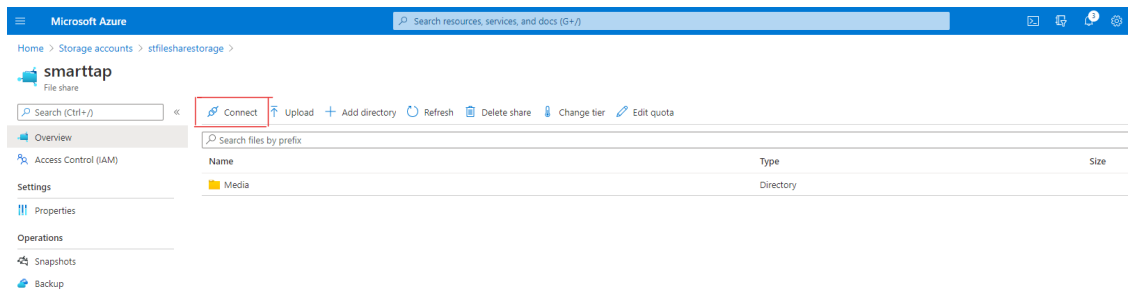

4. Copy the relevant File share name and click on it.

Example: Fileshare name="smarttap"

Figure 6-37: Media Directory Name

5. Copy the Media Directory name

Example: Media directory name="Media"

The Connection script opens.

```
cmd.exe /C "cmdkey /add:"stfilesharestorage.file.core.windows.net`"
/user:"Azure\stfilesharestorage`"
/pass:"RM13Fp6N8VmPZ/P1bgN+4M3Gg5CT7+ALbc6i7DUX/fbeB7tR3CF
BCX7IJWCQgj9xdJmBmX38fcAsnOEioGTaEw==`""
```

6. Copy the following password values:

- Azure Storage Address=add
- Storage Domain\Username=user
- Storage password=pass

Example:

Azure Storage Address= stfilesharestorage.file.core.windows.net

Storage Domain\Username=Azure\ stfilesharestorage

Storage Password=
RM13Fp6N8VmPZ/P1bgN+4M3Gg5CT7+ALbc6i7DUX/fbeB7tR3CFBCX7IJ
WCQgj9xdJmBmX38fcAsnOEioGTaEw==

Setting up Microsoft Azure Blob Storage Account

This procedure describes how to configure Microsoft Azure Blob Storage for storing media recorded by the SmartTAP 360° Live BOT in the Microsoft Teams deployment.

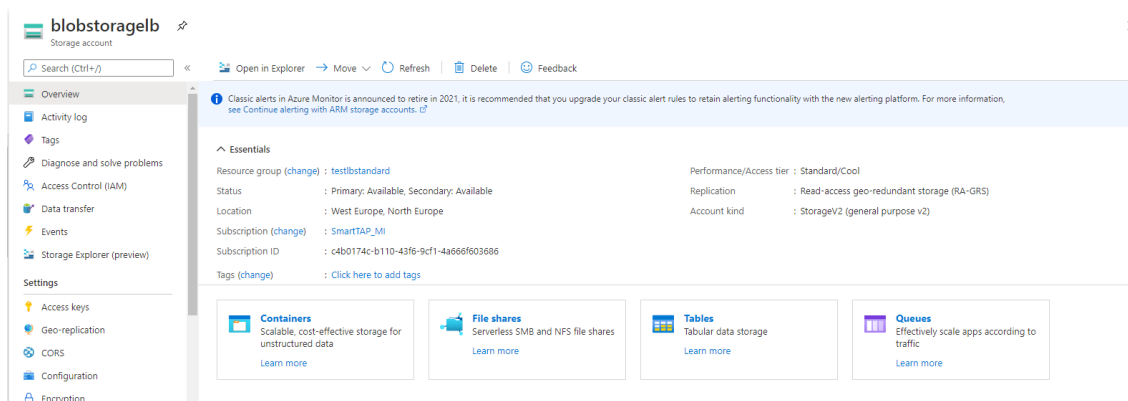

When the Microsoft Teams deployment is hosted in the customer's Azure subscription, the SmartTAP Server can be deployed On-premises, utilizing the On-premises Server Message Block (SMB) storage for media storage (described in [Viewing and Modifying a Recording Location](#) on page 81). You cannot configure both On-Premises and Blob Storage.

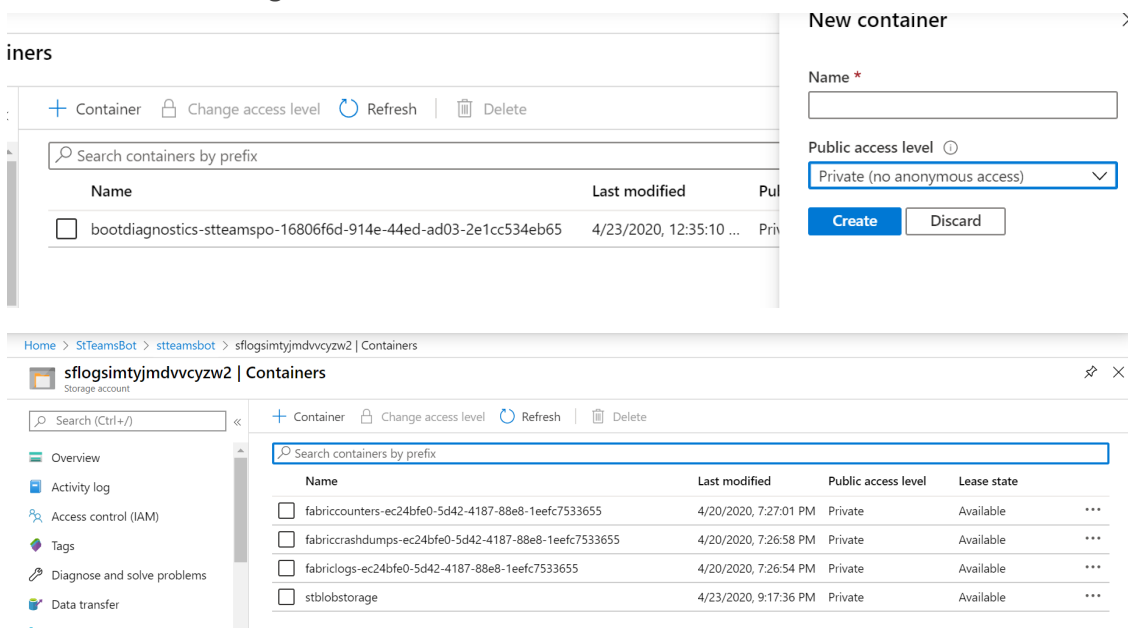

➤ To configure Microsoft Blob:

1. Login to the Microsoft Azure portal (<https://portal.azure.com/>).

2. Open the Storage account settings page.
3. Create or use existing storage account.

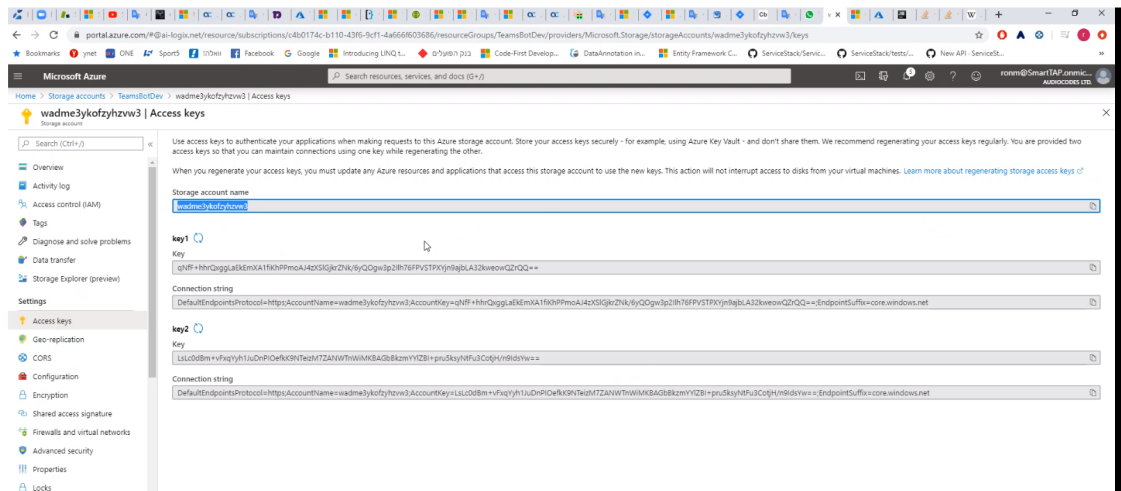

Figure 6-38: Microsoft Blob Storage Account

4. Save the storage name for SmartTAP 360° Live settings.
5. Create anew container for BLOB media storage and save the name.

Figure 6-39: Create New Blob Container

6. Save the storage name and credentials.

Figure 6-40: Storage Name and Credentials

Adding a Recording Location

Media configuration identifies the type and location of the storage for the recordings. The recordings may be stored on a local disk on the SmartTAP 360° Live server (on the Call Delivery Server), or on an SMB network accessible drive, i.e., Windows shared drive for accessing files over the SMB protocol.

1. Open the Add Recording Location screen (**System** tab > **Media** folder > **Add Recording Location**).

- The default location cannot be modified.
- If you are defining shared resources 'SMB Scheme', before adding a new location, ensure that you have defined user credentials for accessing the shared resources (see [Configuring User Credentials](#) on page 69) otherwise the attempt to add the location will fail.
- If you are deploying with Microsoft Teams, see [Adding a Recording Location for Microsoft Teams Deployments](#) on page 78

Figure 6-41: Add Recording Location

2. Use the table below as a reference when adding a recording location.

Table 6-18: Add Recording Location

Parameter	Description
Location Name	Defines a name for the media location. The Location Name of Default cannot be modified.
Description	Description of the location name.
Scheme	Defines the type of database scheme: <ul style="list-style-type: none"> ■ Server Message Block (SMB) Shared File ■ File (local)
Host	The IP address or FQDN of the SMB Scheme host machine.
Path	Defines the media path pattern.

Figure 6-42: Add Recording Location

3. Click .

- Its recommended to define the SMB Scheme host machine with an FQDN instead of an IP address. This prevents situations where the System administrator changes the IP address of the SmartTAP 360° Live application server and as a consequence, the media files can no longer be accessed.
- If you define the media location in a different domain to the SmartTAP 360° Live AS, ensure that write permissions are set for the directory to which you wish to save the media files.

Adding a Recording Location for Microsoft Teams Deployments

For Microsoft Teams deployments, media recordings can be saved according to the following scenarios:

- **Local Storage (Hybrid Model):** Media files are stored locally On-premises for compliance and policy reasons. Media files are accessed via the Microsoft Azure Fileshare Storage account. For this mode, you must configure a **local** host address On-premises and configure **SMB** scheme.
- **Remote Storage on Azure Fileshare:** Media files are accessed from the Azure Fileshare storage account. For this mode you must configure a **remote** Host address and configure **SMB** scheme.
- **Remote Storage on Azure Blob:** Media files are accessed from the Azure Blob storage account. For this mode, you must configure a **remote** Host address and configure **HTTPS** scheme.

➤ **To add a recording location:**

1. Open the Add Recording Location screen (**System** tab > **Media** folder > **Add Recording Location**).

- The default location cannot be modified.
- Before adding a new location ensure that you have defined user credentials for accessing the shared resources (see [Configuring User Credentials for Microsoft Teams Deployments](#) on page 70)

Figure 6-43: Add Recording Location

2. Use the tables below as references for configuring the Microsoft Azure recording location according to the deployment scenarios described above.

Table 6-19: Microsoft Azure Fileshare Recording Location

Parameter	Description
Location Name	Defines the name of the location of the Microsoft Azure Fileshare storage account.
Description	Description of the Microsoft Azure Fileshare storage account
Scheme	smb
Host	The FQDN of the SMB Scheme host machine (either local or remote host depending on the deployment scenarios described above). For example: stfilesharestorage.file.core.windows.net
Path	Defines the media path pattern. For example, '/[fileshare]/[directory]'/yyyy'/MM'/dd'/HHmmss

For extracting the above credentials, see [Extracting User Credentials from Microsoft Azure Fileshare Account](#) on page 72

Figure 6-44: Microsoft Azure Fileshare Recording Location

The screenshot shows a web form titled "Add Recording Location". It contains the following fields and values:

- Location Name:** SmartTAP Azure
- Description:** SmartTAP Azure Storage Account
- Scheme:** smb (selected from a dropdown menu)
- Host:** stfilesharestorage.file.core.windows.net
- Path:** '/smarttap/Media/'yyyy'/'MM'/'dd'/'HHmmss

At the bottom right, there are two buttons: a green "SUBMIT" button and a red "CANCEL" button.

Table 6-20: Microsoft Azure Blob Recording Location

Parameter	Description
Location Name	Defines the name of the Microsoft Blob storage account.
Description	Description of the Microsoft Blob storage account
Scheme	https
Container Name	The name of the container of the Microsoft Blob storage account.

For extracting the above credentials, see [Setting up Microsoft Azure Blob Storage Account](#) on page 74

Figure 6-45: Microsoft Blob Recording Location

The screenshot shows a web form titled "Add Recording Location". It contains the following fields:

- Location Name:** Text input field containing "Azure Blob".
- Description:** Text input field containing "Azure Blob Storage".
- Scheme:** Dropdown menu with "https" selected.
- Host:** Empty text input field.
- Container:** Text input field containing "SmartTAPBlobStore".

At the bottom right of the form are two buttons: a green "SUBMIT" button and a red "CANCEL" button.

3. Click .

- If you define the media location in a different domain to the SmartTAP 360° Live AS, ensure that write permissions are set for the directory to which you wish to save the media files.
- For configuration of Azure Fileshare storage account, refer to <https://docs.microsoft.com/en-us/azure/storage/files/storage-how-to-create-file-share?tabs=azure-portal>

Viewing and Modifying a Recording Location

This section shows how to view or modify a location for saving recorded media.

➤ To modify a recording location:

1. Open the View/Modify Rec. Locations screen (**System** tab > **Media** folder > **View/Modify Rec. Locations**).

The default location cannot be modified.

Figure 6-46: View/Modify Recording Locations - with Default Location Only

The screenshot shows a table titled "View/Modify Recording Locations". The table has columns for "Location Name", "Path", "Description", "Modify", and "Remove". There is one row in the table:

Location Name	Path	Description	Modify	Remove
Default	'/C:/media_nj/'yyyy'/'MM'/'dd'/'HHmmss	Default Recording Location		

Figure 6-47: View/Modify Recording Locations - with Additional Recording Locations

View/Modify Recording Locations				
Location Name	Path	Description	Modify	Remove
Default	'/C:/media_nj/'yyyy'/'MM'/'dd'/'HHmmss	Default Recording Location		
Backup Media Storage	'/Shared/media_nj/'yyyy'/'MM'/'dd'/'HHmmss	Storage location for media recordings backups		

2. Click  to open the Modify Recording Location screen.

Modify Recording Location

Location Name

SMD-E-drive

Description

SMD-E-drive

Scheme

smb

Host

172.17.127.130

Path

'/media/'yyyy'/'MM'/'dd'/'HHmmss

SUBMIT

CANCEL

3. Use the table below as a reference when viewing/modifying recording location.

Table 6-21: Modify Recording Location

Parameter	Description
Location Name	Defines a name for the media location. The Location Name of Default cannot be modified.
Description	Description of the location name.
Scheme	Defines the type of database scheme (smb or file).
Host	The IP address or FQDN of the SMB Scheme host machine.
Path	Defines the media path pattern.

Defining a Recording Format

This section shows how to define a recording format.

➤ **To define a recording format:**

1. Open the Media Storage Location screen (**System** tab > **Media** folder > **Recording Format**).

Figure 6-48: Recording Format

2. Use the table below as a reference when defining a recording format.

Table 6-22: Recording Format

Parameter	Description
Audio Encoding	From the drop-down list, choose one of the following: <ul style="list-style-type: none"> ■ g711Ulaw (uncompressed storage) ■ g711Alaw (uncompressed storage) ■ g729 (compressed storage)
	'Encryption' check box: Select this option to encrypt media files as they are recorded.
Video Encoding	Video recordings are by default saved in MP4/H.264 format (not configurable).

3. Click  to submit changes.

Configure Live Monitoring Location

The Live monitoring feature allows users to listen to calls in real time. When this feature is enabled for a site, Live monitoring media files are buffered to a playlist. The playlist and files are stored in the “Live Monitoring Location” which can be configured using this procedure. The live monitoring content is constantly refreshed by the SmartTAP 360° Live client and can be played back by the user by clicking the Live Monitor microphone button (see [Determining User/Device Status](#) on page 20).

➤ **To configure Live Monitoring file location:**

- Open the Live Monitoring page (**System** tab > **Media** folder > **Live Monitoring**).

Figure 6-49: Modify Live Monitoring Location

In this page, the following can be configured:

- **Scheme:** A protocol for storing and retrieving live monitoring files. Two options for scheme are available:
 - **File:** Used when recordings are stored on the same server as the Application Server.
 - **Smb:** Server Message Block (SMB) also known as CIFS, is used to remotely access shared files and directories on SMB file servers (i.e. a Microsoft Windows "share").
- **Host:** Media files are stored on the host.
- **Path:** Sets the media path for recorded files. The path input is a plain path e.g., C:\Media (no string pattern is available).

- When the changes are submitted, the target folder path is verified for read/write access according to the credentials defined in the Credentials page (see [Configuring User Credentials](#) on page 69).
- The HTML5 Live Monitoring player is not supported for the SMB scheme (only Flash player is supported).

When the Live Monitoring Location has been successfully updated, a confirmation message is displayed at the top of the dialog:

Figure 6-50: Modify Live Monitoring Location-Successfully Update

The screenshot shows a dialog box titled "Modify Live Monitoring Location". At the top, a green message states: "• *Live Monitoring location successfully updated.*". Below this is a form with three fields: "Scheme" with a dropdown menu set to "file", "Host" with an empty text box, and "Path" with the text "/media/live". At the bottom right, there are two buttons: a green "SUBMIT" button and a red "CANCEL" button.

In the case of failure, an error message describing the problem is displayed at the top of the dialog:

Figure 6-51: Modify Live Monitoring Location-Update Error

The screenshot shows the same "Modify Live Monitoring Location" dialog box, but with a red error message at the top: "• *Unable to modify live monitoring location, validation failed. Could not create directories.*". The form fields are identical to Figure 6-50: "Scheme" is set to "file", "Host" is empty, and "Path" is "/media/live". The "SUBMIT" and "CANCEL" buttons are also present at the bottom right.

Configuring Single Sign-on

Single Sign-on (SSO) simplifies the login process for domain administrators. The administrator logs into their machine using domain credentials. The user then attempts to access the Application Server's Web service via a Web browser (Microsoft Edge, Chrome or Firefox). Without SSO, the administrator is directed to a login form where Username and Password are entered and authenticated with the SmartTAP 360° Live server. When SSO is enabled, the administrator is authenticated in the background through Active Directory using the same domain credentials that were used to log into the machine. This bypasses the login page and immediately opens the Welcome page. Initially, SSO is disabled, so the usual login form must be used. Log in with any account with permissions such as the default administrative user admin to make system changes to SmartTAP 360° Live.

The SmartTAP 360° Live server must be added to the Domain.

➤ **To configure Single Sign-On:**

1. Open the Single Sign-On page (**System** tab > **Web** folder > **Single Sign-On**).

Figure 6-52: Single Sign-On

2. Configure the parameters described in the table below.

Table 6-23: SSO Configuration Parameters

Parameter	Description
Enable SSO	Select this option to enable Single Sign-On.
KDC	Key Distribution Center, which is probably located on the Active Directory server. Enter {kdc}. In the example shown in this Appendix, ad.myDomain.local is used.
Principal	The Service Principal Name mapped in the previous steps. Enter {principal}. Note: The principal name must include the security realm. HTTP/SmartTAP 360° Live.myDomain.local@MYDOMAIN.LOCAL is used in the example in this Appendix.
Password	The password set previously in Service Principal Name Mapping. Enter {user password}. testUserPassword is used in the example in this Appendix.

3. When you have completed the configuration click .
4. A status notification indicates that the entries were validated and applied; a popup advises to restart the Application Server for the changes to take effect.

Validating SSO

The validation page validates some of the parameters entered and validates that SSO is functioning correctly.

- The KDC hostname is resolved to an IP address. If the name cannot be resolved, an error is given indicating that the KDC is invalid.
- The Principal name is parsed to ensure it contains the service, hostname and realm, i.e., there is some text for the service (HTTP), followed by a '/' followed by more text for the principal name and a '@' followed by the text for the realm. Each individual piece of this name is not checked and will be used as given.
- The password is not validated in anyway and is taken as entered.

See [Searching for Messages](#) on page 195 for other necessary steps to configure SSO.

Configuring Web Session Timeout

You can configure the Web Session Timeout (in minutes) using the Web Configuration screen. The Web configuration screen shows the current Web Session Timeout in minutes. Changes to this value will only affect logging in after the configuration change takes place. Valid range is 1 to 60 minutes. The time a user session may be left idle before the system automatically logs the user off is configurable. The default is 20 minutes and may be changed by someone with the appropriate security profile credentials.

➤ To configure Web Session Timeout:

1. Open the Session Timeout page (**System** tab > **WEB** folder > **Session Timeout**).

Figure 6-53: Session Timeout

Session Timeout Configuration

Session Timeout (in min.)

2. Specify the appropriate Session Timeout.
3. Click to accept changes.

Configuring an LDAP Connection

The LDAP Configuration page shown below allows configuration of an LDAP Provider. The information required to connect to the LDAP server, along with the user, group, and security group attribute mappings, are all configured from this page. Once the connection information is correctly entered and submitted, the list of object classes and attributes for mapping the various user, group, and security group properties will be obtained from the LDAP server.

SmartTAP 360° Live existing local users that match LDAP-obtained users are treated as the same unique user.

➤ **To add an LDAP connection:**

1. Open the Add LDAP Connection screen (**System > LDAP > Add LDAP Connection**).

Figure 6-54: LDAP Connection Configuration

2. Use the table as reference to the screen parameters.

Table 6-24: LDAP Connection Configuration Screen

Field	Description
Host	Hostname of LDAP provider. Sorted ascending/descending by clicking header up/down arrows. Dropdown displays only matching entries.
Port	The Port on which the LDAP server is listening on. This is typically 389 for plain connections and 636 when using SSL. Sorted ascending/descending by clicking header up/down arrows. Dropdown displays only matching entries.
Principal	The Principal user's distinguished name, to use when connecting to the LDAP Server. This user must at least have search privileges.
Password	The password of the principal user to use for connecting to the LDAP server.

Field	Description
Use SSL	Select this option to secure an SSL connection with the LDAP host. If you select this option, see Configuring SSL below.

➤ **To configure an LDAP connection from the Domain Controller:**

1. Run Active Directory Explorer on the domain controller
2. Find the distinguishedName of the Administrator account (or whatever account has full read access to the entire LDAP database). (i.e. CN=A-Administrator,CN=Users,DC=qalabEE,DC=local)

➤ **To configure an LDAP connection from SmartTAP 360° Live:**

1. Enter the IP or Name of the domain controller in the 'Host' field.
2. Enter distinguishedName in the 'Principal' field.
3. Enter the Port number in the 'Port' field.
4. Provide the password for the distinguishedName account used.
5. Check 'Use SSL' if required (see [Configuring SSL](#) below).
6. Click  to apply changes; 'LDAP Provider Configuration successfully saved.' is displayed above the LDAP Configuration screen title bar.

Configuring SSL

This section shows how to enable SSL encryption between SmartTAP 360° Live and AD for all LDAP transactions.

➤ **To enable encryption between SmartTAP 360° Live and AD for all LDAP transactions:**

1. On the server that stores the certificate authority (typically, the domain's active directory server), run from a command prompt:

```
certutil -ca.cert client.crt
```

2. Copy client.crt from the Active Directory server to the SmartTAP 360° Live server, copy from -----BEGIN CERTIFICATE----- to -----END CERTIFICATE-----.

Figure 6-55: Copy Client Certificate From Active Directory

```

Configuring an LDAP User

This section describes how to map an Active Directory/LDAP user to Microsoft Active Directory. The following entities must be configured:

- User Mappings ([Configuring User Mappings](#) on the next page)
- Group Mappings ([Configuring Group Mappings](#) on page 97)
- Security Group Mappings ([Configuring Security Group Mappings](#) on page 100)

Active Directory/LDAP user mapping is not supported for Microsoft Teams deployments.

Configuring User Mappings

The procedure below describes how to configure User Mappings.

➤ To configure User Mappings:

1. Open the User Mappings screen shown below.

Figure 6-58: User Mappings

2. Use the table below as reference.

Table 6-25: User Mappings – Field Descriptions

Field	Description
User Mappings	<ul style="list-style-type: none"> ■ User Base Context (LDAP path for users). ■ User Filter (Create / Manage User filter). ■ First Name (LDAP Attribute that maps to the user first name). ■ Last Name (LDAP Attribute that maps to the user last name). ■ Login (LDAP Attribute that maps to the user login. The login should map to an attribute that contains a unique value across all LDAP providers, else users with the same login value will be considered the same user). ■ Alias (LDAP Attribute that maps to the user alias, nickname, or employee ID). ■ One Level – Retrieves LDAP attributes for the selected node. ■ Subtree – Retrieves LDAP attributes for the selected node and all its child nodes in the LDAP directory tree.

Field	Description
	 = expand screen
	 = shrink screen

3. Enter the User Mappings Information in the 'User Mappings' screen (click  if necessary to expand the screen).
4. The default user location in Windows is displayed as follows:
OU=Ai-Logix,OU=USA,OU=AudioCodes,DC=corp,DC=audiocodes,DC=com
5. Click **Browse** and navigate to the appropriate OU.

Figure 6-59: LDAP Browser

6. Navigate to the appropriate 'User Path' and then click .
7. Use filtering if you prefer not to add all users.

➤ **To add a filter:**

1. Select the **Create Filter** button.
2. Select the appropriate Conditional Operator (And, Or, Not)
3. Select the appropriate Attribute
4. Select the appropriate Equality Operator (>=, =, ~=, <=)
5. Specify value = (objectClass = user) recommended
6. Click  to apply changes.
7. Click the  icon to add an additional filter condition and repeat above filter steps.
8. Click the  icon to add a new Sub filter and repeat above filter steps.

Figure 6-60: LDAP Filter Builder Example

9. Scroll through the list and select the First Name, Last Name, Login, Email and Alias user attributes:
 - If you created any SmartTAP 360° Live Attributes, they will appear in the list of user attributes as well.
 - Those attributes that were created with 'Network Mapping' defined will be used to trigger recording.
 - 'Ext' and 'SIP URI' in the image above are examples of SmartTAP 360° Live User attributes added for recording purposes.
10. Map SmartTAP 360° Live attributes to appropriate AD user attributes.

Configuring Group Mappings

The procedure below describes how to configure Group Mappings.

➤ To configure Group Mappings:

1. Open LDAP Providers screen (**System** tab > **LDAP** folder > **Add LDAP Config**).
2. Open the Group Mappings screen (click ► if necessary to expand screen).

Figure 6-64: Group Mappings

3. Use the table below as reference.

Table 6-26: Group Mappings - Field Descriptions

Field	Description
Group Mappings	■ Group Base Context (LDAP path for groups)
	■ Group Filter (Create / Manage Group filter)
	■ Name (LDAP Attribute that maps to the group name)
	■ Description (LDAP Attribute that maps to the group description)
	■ Members (LDAP Attribute that maps to the group members. The members attribute should contain a collection of distinguished names of users that belong to the group).
	■ One Level – Retrieves LDAP attributes for the selected node.
	■ Subtree – Retrieves LDAP attributes for the selected node and all its child nodes in the LDAP directory tree.
	▶ = expand screen
	■ = shrink screen

4. Enter the Group Mappings Information in the 'Group Mappings' screen (i.e. (Groups,DC=qalabEE,DC=local)
5. Navigate to appropriate 'Group Path' and then click .
6. Use filtering if you prefer not to add all groups.

➤ **To add a Group Filter:**

1. Select the appropriate Conditional Operator (And, Or, Not).
2. Select the appropriate Attribute.
3. Select the appropriate Equality Operator (>=, =, ~=, <=).
4. Specify a value.

5. Click **SUBMIT** to apply changes.

Figure 6-65: Group Filter

6. Click the  icon to add an additional filter condition and repeat above filter steps.
7. Click the  icon to add a new Sub filter and repeat above filter steps.
8. Click **SUBMIT** to apply changes.
9. Scroll through the list and select the Name, Description and Members attributes.

Figure 6-66: Group Filtering Screen

10. Click  to apply changes; view the listed group in the table .

Figure 6-67: Group Mapping Configured

Base DN	Filter	Search Scope	Modify	Delete
OU=Lync-AnalogDevices,OU=AudioCodes,DC=corp,DC=audiocodes,DC=com	(&(objectClass=group))	ONE_LEVEL		

11. Select the **Group Mapping** tab page to see the list of groups added from the Active Directory. If you only see the 'Default' group listed in the table, the group mapping is incorrect.

Figure 6-68: View/Modify Groups

Configuring Security Group Mappings

This section shows how to configure Security Group Mappings. All mapped Active Directory security groups automatically become SmartTAP 360° Live Security Profiles.

By default, new security profiles are granted no SmartTAP 360° Live permissions.

➤ To configure Security Group Mappings:

1. Open the Add LDAP Config screen (**System** tab > **LDAP** folder > **Add LDAP Config**).
2. Open the Security Group Mappings screen (click if necessary to expand the screen).

Figure 6-69: Security Group Mappings

10. Click  to easily add additional Security Group Mappings.

Configuring OVOC Connection

This section describes how to setup the connection to the OVOC server. SmartTAP 360° Live is managed under AudioCodes One Voice Operations Center in a similar way to other entities that are managed by OVOC (e.g. devices, endpoints and links). This includes the aggregation of alarms and statuses that are raised by the SmartTAP 360° Live components and forwarded to OVOC from the SmartTAP 360° Live Application server. OVOC Agents are installed on the SmartTAP 360° Live Application server for this purpose. For more information, refer to the *SmartTAP 360° Live Installation Guide*).

➤ To configure the connection with the OVOC server:

1. Open the OVOC Settings screen (**System** tab > **Monitoring** > **OVOC**).

Figure 6-73: OVOC Settings

View/Modify OVOC settings

OVOC Connection

IP Address : 172.17.140.67

Trap Port : 162

Keep Alive Port : 1161

SNMP

☒ SNMP v2 ☐ SNMP v3

Community Read : public

Community Write : private

System Info

Name : smarttap

Location : Lod

Access Settings

Login URL : 172.17.127.134

SUBMIT **CANCEL**

2. Configure the following settings:
 - OVOC IP Address
 - Trap Port
 - Keep-alive Port
3. Configure the SNMPv2 community strings:
 - SNMPv2 Community Read string
 - SNMPv2 Community Write string
4. Configure SNMPv3 settings:
 - Security Name-Security Name of the SNMPv3 operator
 - Authentication Protocol-the SNMPv3 authentication protocol (SHA or MD5)
 - Authentication Key- the authentication password.

- Private Protocol-the SNMPv3 privacy protocol (AES 128 or DES)
- Private Key-the private key

The SNMPv2 and SNMPv3 settings should be identically configured on both SmartTAP 360° Live and the OVOC server.

Figure 6-74: SNMPv3 Settings

The screenshot displays the 'View/Modify OVOC settings' interface. It is divided into four main sections: 'OVOC Connection', 'SNMP', 'System Info', and 'Access Settings'. The 'OVOC Connection' section contains three text input fields: 'IP Address' (10.3.180.8), 'Trap Port' (1161), and 'Keep Alive Port' (162). The 'SNMP' section has two radio buttons for 'SNMP v2' and 'SNMP v3' (selected). Below them are text input fields for 'Security Name', 'Authentication Key', and 'Private Key', along with dropdown menus for 'Authentication Protocol' (MD5) and 'Private Protocol' (DES). The 'System Info' section includes text input fields for 'Name' (SmartTAP) and 'Location' (BS). The 'Access Settings' section has a text input field for 'Login URL' (172.17.127.164). At the bottom right, there are two buttons: 'SUBMIT' (green) and 'CANCEL' (red).

View/Modify OVOC settings

5. Configure System Information:

- Name
- Location

- Login URL- this login is used for logging into the SmartTAP 360° Live Web interface from OVOC (Device Information Page)

Managing Users

This section shows how to perform user management. This section describes the following:

- Adding a user (see below)
- [View and Modify Users](#) on page 134
- [Update an Admin User](#) on page 136
- [Reset User Password](#) on page 137
- [Modify a User Password](#) on page 137
- [Uploading an Image](#) on page 138

➤ To add a user:

1. Open the Add User screen (**Users** tab > **User Management** folder> **Add User**).

Figure 6-75: Adding a User

Add User

First Name Last Name

Email Login Id

Id / Alias SIP URI

TEL URI Retention Policy

Recording Profile Legal Hold

Security Profiles

- administrator
- agent
- supervisor

Groups

- APAC Sales
- APAC Support
- Default
- EMEA Sales
- EMEA Support
- NA Sales
- NA Support
- Sales
- Support

2. Enter the user's First Name.

3. Enter the user's Last Name.
4. Optionally enter the user's email (SmartTAP 360° Live sends initial password to this email address).
5. Optionally enter ID / Alias (this is free-form text that can be used to enter the employee ID or any other data).
6. Select an appropriate retention policy for the user (Default: 'default').
7. Select an appropriate recording profile for the user (Default: 'None').
8. Select the security profile or profiles by highlighting them (see the notes on the Add User screen field descriptions, above, for how to select more than one profile).
9. Select the group or groups to which the new user is to be added.
10. Add the appropriate value to any attribute fields that are designated for recording.

If SmartTAP 360° Live is configured for LDAP, any SmartTAP 360° Live attributes mapped to AD attributes will be auto populated.

11. Click  to apply changes; a successful configuration results in a message in green font in the command execution Results area; a failed configuration results in a failure message encoded in red font in the command execution Results area. SmartTAP 360° Live sends an email to the user with their login and initial password, assuming that an email was provided.
12. Use the table below as reference.

Table 6-28: Adding a User

Field	Description
First Name	First name of the user.
Last Name	Last name of the user.
Email	Email of the user (must be valid as a new password is sent to this email).
Login Id	User login name.
Id / Alias	Free text (can be anything).
Retention Policy	Select an appropriate retention policy for the user.
Recording Profile	Select an appropriate recording profile for the user.
Security Profiles	Lists the Security Profiles that can be assigned to the user. Highlighted items indicate the Security Profiles that have been assigned to the user.

Field	Description
	<p>To assign/or remove Security Profiles from the user, hold down the <ctrl> key and click the Security Profiles name(s) to be added/or removed.</p> <p>To select a range of Security Profiles, hold down the <shift> key and click the Security Profile at the top of the range and then the Security profile at the bottom of the range.</p>
Groups	<p>Lists the groups that the user can be a member of. Highlighted items indicate the groups that the user is a member of.</p> <p>To assign/or remove a user from a group, hold down the <ctrl> key and click the Group name(s) to add/or remove the user from.</p> <p>To select a range of Groups, hold down the <shift> key and click the Security Profile at the top of the range and then the Security profile at the bottom of the range.</p>
	Reset Password – displayed only when modifying a user.
	Legal Hold – the retention process will not delete a user's calls or messages when the user is placed on legal hold. This feature is only available when modifying a user.
	Apply the changes.
	Cancel the changes.

Sending Email

The Email screen allows the network administrator to send emails directly from the SmartTAP 360° Live Web interface.

➤ To send an Email:

1. Open the New Email screen (**Users** tab > **Email** folder > **New Email**).

Figure 6-76: New Email

2. Configure the fields using the table below as reference.

Table 6-29: Email Field Descriptions

Field	Description
To > Cc > Bcc >	Clicking the To>, Cc>, Bcc> buttons will expand and collapse the list of users within the current user's group(s). Selecting/deselecting users from this list will add/remove them from the recipient list is a comma separated list of email addresses of the format 'jsmith@example.com'. The recipient list may also include the display name of the recipient. To add a display name for a recipient, the recipient's email address should be surrounded by angle brackets; for example: 'John Smith <jsmith@example.com>'
Subject	Subject of the email.
Attachments	List of attachments to be included with the email. Clicking X adjacent to the attachment removes the attachment from the email.
Body	Body of the email.
	Sends the email.

Field	Description
CANCEL	Cancels the email.

Managing Groups

This section describes how to create, modify and delete groups and sub groups.

➤ To add a Group and associated sub groups:

1. Open the Add Group screen (**Users** tab > **Group Management** folder > **Add Group**).

Figure 6-77: Add Group

Use the table below as reference.

Table 6-30: Group Screen Settings

Field	Description
Group Name	Name of group to add.
Group	Description of the group to add.

Field	Description
Description	
NonMembers	Users that are not group members. Select users by clicking the user name; multiple users while holding <ctrl>; or all within a range by clicking top user and bottom user while holding <shift>
>>	Add all NonMembers to the Members group.
>	Add selected NonMembers to the Members group.
<	Remove selected Members from the Members group.
<<	Remove all Members from the Members group.
Available Groups	List of existing groups. Select groups by clicking the group name; multiple groups while holding <ctrl>; or all within a range by clicking top group and bottom group while holding <shift>
Sub Groups	List of Sub Groups of the group to add.
Members	Users that are members of the group. Select users by clicking the user name; multiple users while holding <ctrl>; or all within a range by clicking top user and bottom user while holding <shift>
	Apply the changes.
	Cancel changes
	Delete Group – displayed only when you modify an existing group.

2. Enter the Group Name.
3. Enter the Group Description.
4. From the list of NonMembers select the users and move them to the Members side by clicking the buttons in between the NonMembers and Members windows.
5. (Optionally, Sub Groups for the Group just being added can be entered from the Add Group screen).
6. Click .

➤ **To view/modify a Group:**

1. Open the screen View/Modify Group screen as shown in the figure below.

Figure 6-78: View/Modify Group

In this screen you can change or delete existing groups. Use the table below as reference.

Figure 6-79: View/Modify Groups – Field Descriptions

Field	Description
Name	Group name displayed. Clicking ▶ to the left of the Name expands the group to show the sub groups.
Description	Description of the group displayed
	Click to modify the group.
	Click to delete the group.

➤ **To modify/delete a group:**

1. In the Modify Group screen, change the Membership by moving users to/from the Members window.
2. Change the Sub Groups by moving Groups to/from the Sub Groups window.

3. Click  to apply changes, or click the  button to delete the group.

Managing Security Profiles

This section describes how to create, view, modify and delete security profiles and to delete calls and messages. The screen allows the administrator to control system access and permissions. The security profiles assigned to users provides a flexible way to access SmartTAP 360° Live resources.

➤ To add a Security Profile:

1. Open the Add Security Profile screen (**Users > Security Profile > .Add Security Profile**).

Figure 6-80: Add Security Profile

2. Use the table below as reference.

Table 6-31: Security Profile Settings

Field	Description
Security Profile Name	The name of the new security profile.
Security Profile Description	Description of the new security profile.

Field	Description
Call and Instant Message Permissions	
No Call or Instant Message Access	Select this option to prevent users with this security profile from accessing call and instant message data. These users cannot delete calls and instant messages.
Access all calls	Select this option to allow users with this security profile to access calls for all users and devices. These users can delete any calls and instant messages.
Access calls within user's groups	Select this option to allow users with this security profile to access calls for all users within all the groups and sub groups of the group hierarchy to which they are a member. These users can delete calls and instant messages that belong to the user's groups.
Access user's own calls	Select this option to allow users with this security profile to access their calls. These users can only delete their own calls and instant messages.
Play Media Related to a call	Select this option to allow users with this security profile to play calls to which they have access.
Download Media Related to a call	Select this option to allow users with this security profile to download media for calls to which they have access.
Email Media Related to a call	Select this option to allow users with this security profile to email media for calls to which they have access.
Tag Calls	Select this option to allow users with this security profile to add Call Tags to calls to which they have access.
Live Monitor	Select this option to allow users with this security profile to live monitor calls to which they have access.
Evaluate Calls	Select this option to allow users with this security profile to evaluate calls to which they have access. Perform evaluation of another user or their own call
Delete Calls and IMs	Select this option to delete calls and instant message conversations according to the different user privileges described above. For more information, see Deleting Calls and Instant Messages on page 152.

Field	Description
View Evaluations / Reports	Select this option to allow users with this security profile view completed evaluations or run reports for evaluations to which they have access.
ROD/SOD other users	Select this option to allow a user to Record or Save on Demand another user's calls. The user to be recorded must be in the same group as the initiator
Configure System	Select this option to allow users with this security profile to view and modify system configuration settings.
Create and modify users and groups	Select this option to allow users with this security profile to create and modify users, groups, and security profiles.
Create Evaluation Forms	Select this option to allow users with this security profile access to the SmartTAP 360° Live Web interface.
	Apply changes.
	Cancel changes.
	Delete Security Profile – displayed only when you modify an existing profile.

3. Enter the Security Profile Name.
4. Enter the Security Profile Description.
5. Select the Call Permissions option.
6. Selecting 'No Call Access' disables the permissions on the right side of the Call Permissions.
7. Select the configuration permissions at the bottom of the form.
8. Click .

➤ **To view/modify Security Profiles:**

1. Open the View/Modify Security Profiles screen.

Figure 6-81: View/Modify Security Profiles

2. Use the table below as reference.

Table 6-32: View/Modify Security Profiles Main Screen

Field	Description
Name	Security Profile name sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Description	Security Profile description sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Permissions	List of permissions enabled for the Security Profile.
	Click to modify the Security Profile.
	Click to delete the Security Profile.

Managing Recording Profiles

Recording profiles determine the method by which a user or device is recorded. A profile may be assigned to one or more users or devices. The Recording profile includes the following settings:

■ **Call:**

- Recording Type – Full Time, Record on Demand, Save on Demand or none.
- Video – enable if video call recording is desired
- Video and Screen Sharing – enable if Video and Screen Sharing recording is desired
- Pause or Resume – enable if the assign with profile user should be able to pause and resume call recordings

■ **Call Type:** All, Internal (incoming, outgoing); PSTN (inbound, outbound); Federated (inbound, outbound); Calls with Internal Conference; Referred by Response Group

■ **Announcements:** Enables announcements for one or more of the above call types.

■ **Recording Beep tone:** Plays a beep tone in the background during the recording.

■ **Instant Messages:** Enables Instant Messaging recording

➤ **To add a Recording Profile:**

1. Open the Add Recording Profile screen (**Users** tab > **Recording Profiles** folder > **Add Recording Profile**).

- In the Call pane ,from the Drop-down list, select a Recording Type and select the appropriate check box For more information, use table below as a reference.
- In the Call type pane, select a Call type. Note that the corresponding announcement profile is activated in the Annoucements pane. For more information, use table below as a reference.
- In the Annoucements pane, assign audio files to play to the Calling party, the Answering party or both according to your selection in the Call type pane. For example, if you selected "Federated Inbound" calls in the Call type pane, then you can assign audio files to play to the calling party and to the answering party. For more information, see example figures and table below as references.
- Assign Announcement WMA media files or IVR JSON script files to play to the Calling party, to the Answering party or to both for incoming and outgoing calls for Internal, PSTN and Federated Call Types. You can assign a different media file to play to the Calling party and to the Answering party.

Ensure that you have setup the Announcement server to support this functionality (see [Announcement Server \(Skype for Business\)](#) on page 237

- See example configurations in [Example Announcement Server Scenarios](#) on page 242

6. Fill in the required fields using the tables below as a reference.

7. Click SUBMIT.

Table 6-33: Recording Profile

Field	Description
Profile Name	Enter a name for the new recording profile.
Profile Description	Enter a description of the new recording profile.
Recording Type	<p>Select one of the following:</p> <ul style="list-style-type: none"> ■ None (default): User is not recorded. Do not assign a recording profile to a user or device if you do not want to record them. ■ Full Time: (supported for Audio, Video, Instant messages and Video and Screen Sharing) automatic recording of complete call will begin from start of call with no user action required. ■ Record on Demand: (supported for audio) recording will commence from a specific point in the call that the user decides to record. ■ Save on Demand: (supported for Audio, Video, and Video and Screen Sharing) recording will contain audio and/or video from the beginning of the call, if the user decides to record the call. Audio and/or Video recording can be triggered from the GUI Status page or from the Skype for Business CWE toolbar. For more information, see SmartTAP 360° Live Skype for Business Toolbar on page 221 <p>Audio/Video recording can be triggered from the GUI Status page or from the Skype for Business CWE toolbar.</p> <div style="border: 1px solid gray; padding: 10px; margin-top: 10px;">  <p>For Microsoft Teams, SmartTAP can be integrated into the Microsoft Teams client as a Personal App (Refer to Step 8 Setup SmartTAP Personal App in the <i>SmartTAP 360° Live Deployment Guide</i>).</p> </div>
Video	Record a video call (Full Time or Save on Demand).
Pause / Resume	Select Pause / Resume audio recording during sensitive areas of the conversation with a customer, for example, when Credit Card details are

Field	Description
	given. The process is manual and executed from the Status page. Pause/Resume of a recording can be triggered from the SmartTAP 360° Live Web interface status page or from the Skype for Business CWE toolbar.
Instant Message	Automatic Instant Message recording for both Skype for Business recordings and Microsoft Teams recordings.
Video and Screen Sharing Recording	Recording of Video and Screen Sharing sessions is currently supported with Full time or Save on Demand recording type.
SUBMIT	Apply the changes.
CANCEL	Cancel the changes.

■ Call Type

The Recording profile contains call types that can be selected and recorded. The call types described in the following table are supported. The options below relate to SmartTAP 360° Live users and devices regardless of the users or devices location (intranet, internet, mobile device).

These call types are relevant for Skype For Business; Audio; Video and Video and Screen Sharing recording.

Table 6-34: Call Type

Field	Description
All	Record all calls that the recording profile user participates in as calling party. This option is enabled by default or when a new recording profile is created.
Internal (incoming, outgoing)	Internal calls are calls made between the recording profile user or device and other users belonging to the same domain as the recording profile user. To record Internal calls that the user receives, select the “Incoming” option. To record Internal calls that the user makes, select the “Outgoing” option. *Select the “Calls with Internal Conference” to record Internal calls that are elevated to a conference.
PSTN	PSTN calls are those calls made between the recording profile user and

Field	Description
(inbound, out-bound)	PSTN parties. To record PSTN calls that the user receives, select the “Inbound” option. To record internal calls that the user makes, select the “Outbound” option. *Select the “Calls with Internal Conference” to record PSTN calls that are elevated to a conference.
Federated (inbound, out-bound)	Federated calls are those calls made between the recording profile user and federated domain users. To record Federated calls that the user receives, select the “Inbound” option. To record Federated calls that the user makes, select the “Outbound” option. This option covers calls between the user and the federated conference bridges according to the selected directions.
Calls with Internal Conference	Record user calls with an Internal conference bridge in the company domain.
Referred by Response Group	Record user calls that are referred by a response group. To record calls referred by a response group to any user, select this option and create a user or device with the network mapping attributes that are associated with the response group (the Response Group URI). To record all calls that a response group is involved, select this option and the “All” option and create a user or device with the network mapping attributes that are associated with the response group (the Response Group URI).
Filter Calls User Receives Filter Calls User Makes	To filter calls that the user receives or makes, choose the type of the filter. To record the user calls with specific numbers, choose “White” in the List Type. To record calls of the user except with specific numbers, choose “Black” in the List Type. The Filter is applied on the calls with the comma-separated phone numbers defined in the Numbers field. For example: “17326524689, 17326524690”, a regular expression can be entered when the phone number ranges need to be filtered. For example, to filter calls with phone numbers that starts with area code 732 or 609, enter the following in the regular expression field: <code>^(1{1} \+1{1})?(732 609)\d*\$</code> . When both the numbers and regular expressions are provided, the system first checks against the regular expression and if a match is not found, continues with the numbers. The maximum length of the numbers and the regular expression field is 2048 characters.

■ Announcements

Recording profile contains announcements configuration that can be selected and applied on the recorded user calls according to the options in the following table.

- The configuration options below are supported for Skype For Business calls.
- The Announcement server must be installed.
- The configuration options below relate to SmartTAP 360° Live users and devices, regardless of the user or device location (intranet/internet, mobile device).

Table 6-35: Announcements

Field	Description
Internal (incoming, outgoing)	Play announcement on the Internal calls of the recorded user. To play announcement on the calls the user receives, select the “Incoming” option. To play announcement on the calls the user makes, select the “Outgoing” option. *Playing the announcement on the calls with conference server is currently not supported
PSTN (inbound, outbound)	Play announcement on the PSTN calls of the recorded user. To play announcement on the PSTN calls that the user receives, select the “Inbound” option. To play announcement on the PSTN calls that the user makes, select “Outbound” option.
Federated (inbound, outbound)	Play announcement on the Federated calls of the recorded user. To play announcement on the Federated calls that the user receives, select the “Inbound” option. To play announcement on the Federated calls that the user makes, select the “Outbound” option.
Record Announcement	To record played announcement, select this option. When the option is enabled and the announcement is played to both the incoming and outgoing legs of the call, both call legs are recorded and two recording licenses are consumed for the announcement part of the call recording. .
Don't Play Announcement Destination Number	Don't play announcements on the calls to the numbers defined in this field. The numbers should be comma separated. Enter the numbers when playing announcement on calls to a specific destination is not desired. For example, calls to 911, enter 911
Block Calls on Announcement Unavailability	The calls with the recorded user will be blocked when the calls can't be routed to the announcement server(s).
Configure Media Files to Play on Announcements	<ul style="list-style-type: none"> • ANN files must be of file type WMA • IVR files must be of file type JSON • You must specify the file extension type in the file name. For example, PSTN_Inbound.wma • ANN and IVR files must be pre-saved to the StateMachineConfig folder on the ANN server: see 'Step 3-Configuring

Field	Description
	Announcement Server (Skype for Business)' in the <i>SmartTAP 360° Live Installation Guide</i> .

- **Beep Tone:** Beep tones can be played on the calls which media traverses the Media Proxy Server only.

- The Announcement Server does not require to be installed to play beep tones.
- Beep tone can be played on calls which media traverse the Media Proxy Server only
- The playing of beep tones on the calls between targeted users and Skype For Business Conference Server is not supported.
- Contact AudioCodes sales or support for information on the supported scenarios. For configuration of beep tone parameters, refer to the *SmartTAP 360° Live Installation Guide*.

Field	Description
Play Beep Tone	The beep tone is played in the background during the call recording (disabled by default). Beep tone can be played on the calls which media traverses the Media Proxy Server.

■ Instant Messages

Enables Automatic Instant Message recording.

Viewing or Modifying Recording Profiles

This section describes how to view or modify recording profiles.

➤ To view/modify Recording Profiles:

1. Open the View/Modify Recording Profiles screen (**Users** tab > **Recording Profiles** folder > **View/Modify Recording Profiles**).

Figure 6-83: View/Modify Recording Profiles

View/Modify Recording Profiles

FULL_TIME_A_V_DS	Full time voice, video, desktop sharing	SAVE_ON_DEMAND	Enabled	NONE	Enabled	
<div> 20 ▾   1   (1 of 1) </div>						

2. Use the table below as reference.

Table 6-36: View/Modify Recording Profiles – Field Descriptions

Field	Description
Name	Recording Profile name, sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Description	Recording Profile description sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Audio Recording Type	Full Time, Record on Demand or Save on Demand.

Field	Description
Video Recording Type	Full Time or Save on Demand.
IM Recording Type	Full Time or None
Video and Screen Sharing Recording	Full Time or Save on Demand
	Click to modify the Recording Profile.

Assigning Recording Profile to User or Device

This section describes how to assign a recording profile to a user or device.

➤ To assign a recording profile to a User / Device account:

- **Option method #1:** Add the recording profile to the account manually when the user account is created in SmartTAP 360° Live. To create a new user account and assign a Recording Profile:

- a. Under the User tab, select **View/Modify Users**.
- b. Click .
- c. From the 'Recording Profile' dropdown, select the required profile (i.e., R.O.D).
- d. Click  to apply the changes.

- **Optional method #2:** Under the User tab, select Recording Profiles | Users / Devices to assign a single or bulk list of users / devices their recording profile. To manage a single or bulk assignment of recording profiles for existing user / device accounts:

- a. Under the User tab, select Recording Profile | User / Devices.
- b. Using the arrows, move single or bulk list of user / devices from the left screen to one of the recording profiles available.
- c. Click Submit to apply changes.

- By default, SmartTAP 360° Live includes the 'Full Time' recording profile.
- All users imported from Active Directory will not have a recording profile assigned. Use optional method # 2 above to quickly assign multiple users the appropriate recording profile.

➤ **To assign a single/multiple user(s)/device(s) to the appropriate recording profile:**

1. Open the Add Users to Recording Profiles screen shown below.

Figure 6-84: Add Users to Recording Profiles

The screenshot shows the 'Add Users to Recording Profiles' interface. On the left, under 'No Recording Profile', there is a list of users and devices. 'Da Silva, Sandy' is highlighted. On the right, under 'Recording Profiles', there are three empty boxes for 'Test', 'Video FT', and 'Video SOD'. Navigation buttons (>>, >, <, <<) are placed between the list and the profile boxes. At the bottom right, there are 'SUBMIT' and 'CANCEL' buttons.

2. Use the table below as reference.

Table 6-37: Add Users to Recording Profiles Screen

Field	Description
No Recording Profile	List of available Users / Devices in SmartTAP 360° Live unassigned to a specific recording profile.
Recording Profiles	Choose from one of the available recording profiles that were defined above to assign a User / Device (Full Time is the default profile)
>>	Add all available users / devices to a specific recording profile.

Field	Description
>	Add a user / device to a specific recording profile.
<	Remove a selected user / device from a specific recording profile.
<<	Remove a selected user / device from a specific recording profile.
SUBMIT	Apply changes.
CANCEL	Cancel changes.

- In addition to assigning a user / device with a recording profile, you must add a recording attribute and a targeting value.
- SmartTAP 360° Live will use the added targeting value to trigger recording once detected in the call signaling.

Managing Recordable Devices

This section shows how to manage recordable devices.

➤ To add a Recordable Device:

1. Open the Add Recordable Device screen (**Users** tab > **Recording Profile** > **Add Recordable Device**).

Figure 6-85: Add Recordable Device

2. [Use the table below as reference] Enter a Name for the device.

3. Enter a Description for the device.
4. Select the Type from the dropdown menu.
5. From the list of Available Groups, select the groups and move them to the Assigned Groups by clicking the > / >> buttons.
6. Click Submit to apply changes.

Table 6-38: Recordable Device – Settings Descriptions

Field	Description
Name	Name of the new recordable device.
Description	Description of the new recordable device.
Type	Type of recordable device. Dropdown menu shows valid entries.
Retention Policy	Select an appropriate retention policy for the device.
Recording Profile	Select an appropriate recording profile for the device.
Available Groups	User groups available to assign to this device. Select groups by clicking the group name; multiple groups while holding <ctrl>; or all within a range by clicking top group and bottom group while holding <shift>.
Assigned Groups	User groups assigned to this device. Select group by clicking the group name; multiple groups while holding <ctrl>; or all within a range by clicking top group and bottom group while holding <shift>.
>>	Add all Available Groups to the Assigned groups.
>	Add selected Available Groups to the Assigned groups.
<	Remove selected Groups from the Assigned group.
<<	Remove all Groups from the Assigned group.
	Apply the changes.
	Cancel the changes.
	Delete Device – displayed only when you modify an existing profile.

➤ **To view/modify a Recordable Device:**

1. Open the View/Modify Recordable Device screen as shown in the figure below.

Figure 6-86: View/Modify Recordable Devices

Name	Description	Type	Modify	Delete
Lobby Phone	Ext 5001	PHONE		
NCR	NCR Support	OTHER		
DCI	DCI Support	PHONE		
AutoAttendant	Corp AutoAttendant	ACD		
Menachem Honig-USA		PHONE		

20 |< << 1 >> >| (1 of 1)

2. Use the table below as reference.

Figure 6-87: View/Modify Recordable Devices – Field Descriptions

Field	Description
Name	Recordable device name sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Description	Recordable device description sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Type	Type of recordable device sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
	Click to modify the Security Profile.
	Click to delete the Security Profile.

Adding a Device Attribute

This section describes how to add a SmartTAP 360° Live device attribute. The table below describes the purposes of these attributes.

Table 6-39: SmartTAP 360° Live Device Attributes

Attribute Purpose	Priority	Description
Trigger Recording	Critical	To designate to SmartTAP 360° Live what to use to trigger recording. (i.e., Add SIP_URI attribute and provide a value to be assigned to the device. If the device makes a SIP call, SmartTAP 360° Live will trigger a recording based on the SIP_URI). See also below.
Provide Additional device Info	Optional	Add additional information to the device account within SmartTAP 360° Live, for example, Ext, Tel URI, Mobile, etc. for information purposes only. See also Adding a General Device Attribute on the next page.

Enhance the integration by mapping SmartTAP 360° Live attributes to Active Directory attributes to auto populate device information within SmartTAP 360° Live. To map a device attribute to an Active Directory device attribute, see [Configuring an LDAP Connection](#) on page 87

Table 6-40: User Attributes

User Attribute	Description
Name	Unique easily identifiable name to the attribute.
Description	Brief Description of the attribute.
Network Mapping	Indicates whether attribute mapping is required. When selected, the 'Network Mapping Type' drop-down list is available.
Network Mapping Type	Indicates the type of network mapping that is required for the user. Choose from one of the following values: <ul style="list-style-type: none"> ■ TEL_URI ■ SIP_URI ■ IP_ADDRESS ■ TERMINAL_ADDRESS ■ USERNAME ■ EXTENSION

User Attribute	Description
	<ul style="list-style-type: none"> ■ TRUNK_ID ■ OBJECT_ID

You can add the following types of attributes:

- [Adding a General Device Attribute](#) below
- [Adding a Device Attribute for Recording](#) below
- [Adding a Microsoft Teams AAD User Attribute](#) on page 133

Adding a General Device Attribute

This section describes how to add a general device attribute. A general device attribute is not used for recording purposes.

➤ To add a general device attribute:

1. Open the Add Device Attribute screen (**Users > User Management > Add Device Attribute**).

Figure 6-88: Add General Device Attribute

2. Enter the Attribute Name.
3. Enter the Attribute Description.
4. Leave the Network Mapping option cleared.
5. Click **SUBMIT** to apply new device attribute or **CANCEL** to exit.

Adding a Device Attribute for Recording

This section describes how to add a recording device attribute.

➤ **To add a device attribute for recording purposes:**

1. Open the Add Device Attribute screen (**Users > User Management > Add Device Attribute**).
2. Enter the Attribute Name.
3. Enter the Attribute Description.
4. Select the **Network Mapping** option.
5. From the Network Mapping drop-down list, select the appropriate Network Mapping type e.g. 'SIP_URI'
6. Click **SUBMIT** to apply new device attribute or **CANCEL** to exit.

Following are examples of device attributes created for recording purposes:

Figure 6-89: Add Device Attribute - Example 1

The screenshot shows the 'Add Device Attribute' form with the following fields and values:

- Attribute Name:** SIP URI
- Attribute Description:** SIP URI
- Network Mapping:** ☒
- Network Mapping Type:** SIP_URI (selected from a dropdown menu)

At the bottom right, there are two buttons: **SUBMIT** (green) and **CANCEL** (red).

Figure 6-90: Add Device Attribute - Example 2

The screenshot shows the 'Add Device Attribute' form with the following fields and values:

- Attribute Name:** Ext
- Attribute Description:** Extension Number
- Network Mapping:** ☒
- Network Mapping Type:** EXTENSION (selected from a dropdown menu)

At the bottom right, there are two buttons: **SUBMIT** (green) and **CANCEL** (red).

Adding a Microsoft Teams AAD User Attribute

This section describes how to add a custom user attribute for mapping the Object ID of the Microsoft Teams user Active Directory attribute. When the Object_ID is assigned its mapped to the value 'id' which can then be configured in the mapping profile in the Active Directory Configuration (see [Step 5 Add Azure Active Directory Mapping in SmartTAP 360° Live](#) on page 261).

The SmartTAP users must have an AudioCodes Active Directory OBJECT_ID attribute mapping type set with the matching Teams User ID. This attribute is required for both Voice and Instant Messaging recordings for Microsoft Teams.

➤ To map SmartTAP 360° Live user to Object ID attribute:

1. Open the Add Device Attribute screen (**Users > User Management > Add Device Attribute**).
2. Enter the Attribute Name.
3. Enter the Attribute Description.
4. Select the **Network Mapping** option.
5. Select the Network Mapping type 'OBJECT_ID'.

Figure 6-91: Add User Attribute

6. Click  to apply the new device attribute.
7. Open the View/Modify Users screen (**Users tab > User Management folder > View/Modify User**).
8. Click  adjacent to the relevant Teams user.

The Active Directory Object_ID attribute is retrieved in SmartTAP synchronization with the Active Directory and displayed in the Modify User screen.

Figure 6-92: Configure Teams User ID Attribute

The screenshot shows the 'Modify User' interface. At the top, there's a blue header bar with the text 'Modify User'. Below this, on the left, is a placeholder for a user profile picture. To the right of the picture are several input fields for user information: 'First Name' (ST-Teams10), 'Last Name' (empty), 'Email' (ST-Teams10@smarttap.onm), 'Login ID' (ST-Teams10@smarttap.onm), 'Alias' (empty), '<script>' (empty), 'OID' (4c0cdfc2-0e7e-4ddc-8b3c-8f), 'Object ID' (e-4ddc-8f4c-800adb71926dt), 'TeamsUserId' (empty), and 'Retention Policy' (Default). Below these fields are 'Recording Profile' (SOD) and 'Legal Hold' (OFF). At the bottom, there are two scrollable lists: 'Security Profiles' (administrator, agent, Custom, supervisor) and 'Groups' (Default, Sales, Support). At the very bottom right, there are four buttons: 'SUBMIT' (green), 'CANCEL' (red), a lock icon, and a wrench icon.

View and Modify Users

This section describes how to view and modify users.

➤ **To view/modify users:**

1. Open the View/Modify Users screen (**Users** tab > **User Management** folder > **View/Modify User**).
2. Use the table below as reference to search for a specific user to modify.

Figure 6-93: View/Modify Users

The screenshot shows the 'Modify User' interface. At the top, there's a blue header bar with the text 'Modify User'. Below this, on the left, is a placeholder for a user profile picture. To the right of the picture are several input fields: 'First Name' (Tania), 'Last Name' (Adar), 'Email' (tania.adar@audiocodes.com), 'Login Id' (tadar), 'Id / Alias' (empty), 'SIP URI' (sip:Tania.Adar@audiocodes.com), 'TEL URI' (tel:+17326524689;ext=4689), 'Retention Policy' (Default), 'Recording Profile' (Audio&Video&DS), and 'Legal Hold' (OFF). Below these fields are two lists: 'Security Profiles' (administrator, agent, supervisor) and 'Groups' (APAC Sales, APAC Support, Default, EMEA Sales, EMEA Support, NA Sales, NA Support, Sales, Support). At the bottom right, there are four buttons: 'SUBMIT' (green), 'CANCEL' (red), a trash icon, and a refresh icon.

Table 6-41: View/Modify Users

Field	Description
First Name	User first name sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Last Name	User last name sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Email	User email address sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Login Id	User login ID sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.
Id / Alias	User ID / Alias sorted ascending/descending by clicking header up/down arrows. If defined, the field entry displays only matching entries.

Field	Description
	Click to modify the user.
	Click to delete the user.
Page Navigation buttons	Buttons are shortcuts to the beginning/end, previous/next page of displayed entries. The dropdown allows changing the number of entries per page.

3. Click  adjacent to the user that you wish to change.
4. Modify the fields to change.
5. Click  to apply changes.

Update an Admin User

This section describes how to update an Admin user.

➤ To update an Admin User (optional):

- After logging in, the 'admin' user can create a new administrator account or just edit the information and modify the password for this account.

Ensure that you configure SMTP settings (see [Configuring Email Server Settings](#) on page 67).

➤ To modify / update an Admin User:

1. Log in as user 'admin'.
2. Open the View/Modify User screen (**Users** tab > **User Management** folder > **View/Modify User**).

Figure 6-94: Modify User

View/Modify Users							
First Name	Last Name	Email	Login Id	SIP URI	TEL URI	Modify	Delete
Tania	Adar (admin)		admin				
Tania	Adar (x3051)		tadar	sip:user3051@lcent4.local	tel:+17005553051;ext=3051		
Eric	Banks (x3056)		ebanks	sip:user3056@lcent4.local	tel:+17005553056;ext=3056		
Lorenzo	Barrett		lbarrett	sip:user3057@lcent4.local	tel:+17005553057;ext=3057		
Rosie	Huff		rhuff	sip:user3055@lcent4.local	tel:+17005553055;ext=3055		
Edgar	Jenkins		ejenkins				
Barbara	Warner		bwarner				

3. Update the user information (First name, Last name, Email, Login Id).
4. Make sure the email is a valid email.
5. Id/Alias is an optional text field that can be used to enter any data. For example, employee ID or nickname to help identify the user if there are multiple users with the same first & last name.

Reset User Password

This section describes how to reset user passwords.

➤ To reset a user password:

Only users who belong to profiles with 'Create and modify users and groups' privileges are allowed to reset other users' passwords. All users can reset their own passwords.

1. Open the View/Modify Users screen (**Users** tab > **Users** folder > **User Management** > **View/Modify Users**).
2. Open the Modify User screen by clicking  in the View/Modify User main screen display for the user to reset password.
3. Click the **Reset Password**  button.

Modify a User Password

This section describes how to modify a user password.

➤ To modify a user password:

1. Open the Change Password screen (**Users** tab > **Users** folder > **User Management** > **Modify Password**).

Figure 6-95: Change Password

2. [Use the table below as reference]. Enter the current password.
3. Enter the new password.
4. Confirm the new password.
5. Click  to change the password; the system automatically logs off and the user is required to log in with the new password.

Figure 6-96: Change Password

Field	Description
Current Password	Current password.
New Password	The password that will replace the current password.
Confirm	Reenter the new password.
	Apply the changes.

The only method to regain access to the SmartTAP 360° Live system after a password is lost is for a user with Add/Modify privileges to reset this user password.

Uploading an Image

This section describe how to upload an image.

➤ To upload an image:

Select this option to upload your own image.

Figure 6-97: Upload User Image

➤ **To upload an image**

1. Click the Browse button and navigate to the appropriate folder to select the image.
2. Click **Upload** to load the image or click Clear to select a different image.

Managing Calls

This section shows how to manage calls. They're managed under the Calls tab in the Search Calls Navigation screen, shown and described below.

Figure 6-98: Call Search

The screenshot displays the 'Call Search' interface. At the top, there are tabs for 'System', 'Users', and 'Status'. Below these are 'Calls' and 'Messages' tabs, with 'Calls' currently selected. A left arrow is visible to the right of the tabs.

Figure 6-99: Search Calls Navigation Screen - Calls Tab

Field	Description
From:	Earliest date and time to search from. Click the date field for a calendar to pop up showing one month at a time. From the dropdown, change the time of day. Note: When searching for calls within a time range, only calls that start within the range are returned in the search results.
To:	Latest date and time upon which to search. Click the date field for a calendar to pop up showing one month at a time. From the dropdown, change the time of day.
Active Users	Users whose accounts are enabled in the SmartTAP 360° Live system.
Inactive Users	Users whose accounts have been deleted from the SmartTAP 360° Live system.
Active Devices	Devices that are not associated with users enabled in the SmartTAP 360° Live system and can be targeted for recording.
Inactive Devices	Devices that have been deleted from the SmartTAP 360° Live system.
Users/Devices	Only Users and Devices will be listed in the search list. Either the Users/Devices or the Groups option must be selected.
Groups	Only Groups will be listed in the search list. Either the Users/Devices or the Groups option must be selected.
User/Devices: (list)	To select multiple Users/Devices, highlight the name; multiple Users/Devices while holding <ctrl>; or all within a range by clicking top User/Device and bottom User/Device while holding <shift>.
Call Parties: Calling Called Answered	Enhance the search by specifying the Calling (Caller ID), Called and/or Answering party. Use a wild card to broaden the search Example *732* will return all calls with 732 anywhere in the number 732* will return all calls that start with 732 *Bill will return all calls with a user participant with a name that contains the word 'Bill'.
Call Tags	Select one or more Tags and provide a value to enhance search.
Search	Click to search and display results.

Searching for Calls

This section shows how to search for calls.

The search fields' logical operations are:

Selected Users/Devices or Users/Devices within selected Groups

AND

Call Parties

AND

Call Tags

where Call Parties Calling, Called, Answered are logically ORed and Call Tags (Call Tag1 ... Call TagN) are logically ORed.

➤ To search for calls:

1. Open the Search Calls screen by clicking the **Calls** tab.
2. In the Search Criteria pane, from the Drop-down list, select one of the following search criteria:
 - Last Hours
 - Last Days
 - Last Weeks
 - Custom Dates (enables you to customize the day and time range using the calendar)

Figure 6-100: Search Criteria-Last Two Days

The screenshot shows the 'Search Criteria' dialog box. At the top, there is a dropdown menu set to 'Last Days' and a numeric input field set to '2'. Below this, the 'From' field is set to '11/24/19' with a time dropdown set to 'PM'. The 'To' field is set to '11/26/19' with a time dropdown set to 'PM'. Underneath, there are checkboxes for 'Active Users' (checked), 'Inactive Users' (unchecked), 'Active Devices' (checked), and 'Inactive Devices' (unchecked). Below these are radio buttons for 'Users/Devices' (selected) and 'Groups' (unselected). A section titled 'Users/Devices:' contains a 'Select All' checkbox. At the bottom, there is a list box showing 'John Smith' and 'shirel M', with 'John Smith' highlighted. Navigation buttons (first, previous, next, last) and a page indicator '(1 of 1)' are at the very bottom.

3. If you selected Last Hours, Last Days or Last Weeks, use the arrow keys adjacent to the selected option to toggle to the desired value. If you selected Custom Dates, set the

desired time and date range using the calendar. The figure below shows a calendar search from November 24 2019 at 06:00 am to November 26 at 12:00 am.

Table 6-42: Search Calls Results

Field	Description
	Launches the Add and Remove Columns dialog.
User/Device	User/Device name. Clicking this header sorts the search results in Ascending/Descending order alternating with each click.
Started	Date and time the call recording started. Clicking this header sorts the search results in Ascending/Descending order alternating with each click.
Duration	Call Duration. Clicking this header sorts the search results in Ascending/Descending order alternating with each click.
Direction	The column represents Call Direction (Incoming, Outgoing). Clicking this header sorts the search results in Ascending/Descending order alternating with each click. Dropdown entry shows only the matching results.
Release Cause	Release cause for the call. Clicking this header sorts the search results in Ascending/Descending order alternating with each click. Dropdown entry shows only the matching results.
Release Calls Details	Release Cause of the Original Call. Applicable to Skype For Business. Example: "Call failed to establish due to a media connectivity...;22 "Action initiated by user";51004;.
Media Type	Indicates the media type. One of the following values: <ul style="list-style-type: none"> ■ Audio: the Speaker icon is displayed in this column for a recorded audio call. No icon is displayed for a non-answered call. ■ Video: the Video icon is displayed in this column for a recorded video call. No icon is displayed for a non-answered call. ■ Skype for Business or Microsoft Teams Desktop Application (Video and Screen Sharing): the Video and Screen Sharing call icon is displayed. No icon is displayed for a non-answered call. ■ None
	Indicates that the call audio has been successfully recorded.
	Indicates that the call video has been successfully recorded.

Field	Description
	Indicates that the Video and Screen Sharing has been successfully recorded.
Expires	<p>Call recording expiration date. The date after which the call recording is purged. The date is calculated based on the retention profile assigned to the call. If the call was put on legal hold or evaluated, the expiration date is presented along with a lock icon.</p> <p>The Expires field has a value only when during the call the associated user had retention policy assigned to it and the period of the policy was set to a larger than 0 value (0 is default implying that calls should never expire).</p>
Notes	<p>There are no notes associated with this call. There are notes associated with this call.</p> <p>Notes are displayed adjacent to the Player screen as highlighted in the figure above with the note example “Executive Call”.</p>
Display Video	Displays the video screen. When you select the  button, the recorded video is replayed.
System Call ID	Indicates the Original Call ID. Applicable to Skype For Business and other SIP-related integrations. This ID can be used to correlate call records to the original calls.
Conversation ID	Indicates the Skype For Business Conversation ID. This ID can be used to correlate between audio/video and content sharing calls made by a user from SFB client as part of one conversation.
Conference ID	Indicates the Skype For Business Conference ID. This ID identifies the conference to which the call was connected. It can be used to correlate between audio/video and content sharing calls made by a user from a SFB client.
Tags	Identifies whether tag have been defined for the call as follows
	Indicates that no tags are associated with a recording
	Indicates that a tag has been associated with a recording.
Media Status	Corresponding Media Reason

Field	Description
Reason	
None	None - Indicated when there are no media files and the call was not answered i.e. Abandoned or Missed.
	None – There are no reasons.
	Silent Media – Indicates when media files associated with the call are silent; the packets were received however didn't carry audio.
	<ul style="list-style-type: none"> No Media – Indicates that there are no media files associated with the call; however, the call was answered. No License - Indicates that the media cannot record as a result of no licenses being available. No Packets - Indicates that no packets are received for media recording on one or both sides of the call.
	Deletion
	Pending Deletion

➤ **To filter search results:**

- Click a column heading to sort A-Z or Z-A.
- To apply additional filters, type into the text box below the column heading where applicable.
- Use a * wild card to enhance the filter.
- Filter 'abc' will search the field for any string that starts with 'abc'.
- Filter '*abc' will search the field for any position within the string to match 'abc'.

➤ **To add/remove columns from the Search Call Results:**

Figure 6-106: Add/Remove Columns from the Search Call Results Screen

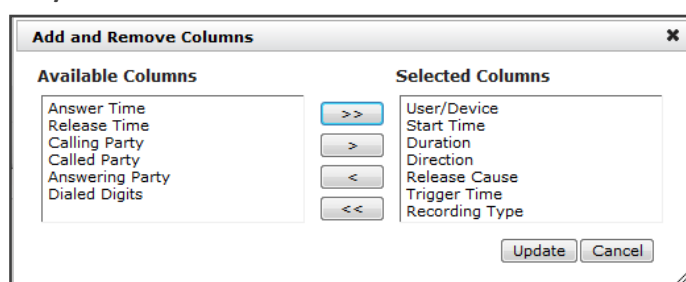

Table 6-43: Add and Remove Columns – Field Descriptions

Field	Description
Available Columns	List of columns that can be added to the search results table.
Selected Columns	List of columns that will be displayed in the search results table.
>>	Moves all items from the Available Columns list to the Selected Columns list.
>	Moves the selected item(s) from the Available Columns list to the Selected Columns list, effectively adding the column to the search results table.
<	Moves the selected item(s) from the Selected Columns list to the Available Columns list, effectively removing the column from the search results table.

	Applies changes and closes the screen.
	Cancels changes and closes the screen.

➤ **To add/remove columns from the Search Call Results:**

1. Click the  button in the 'Search Calls' results screen to open the 'Add and Remove Columns' dialog.
2. Move the Columns to display to the 'Select Columns' side of the screen. Use the table below as reference.
3. Click Update to apply the changes and close the screen.

Table 6-44: Add and Remove Columns

Field	Description
User / Device	Targeted User or Device.
Start Time	Initial off-hook or offering of the call.
Answer Time	The time at which the call was answered.
Release Time	The time at which the call was disconnected.

Field	Description	
Trigger Time	The time at which the user manually initiated Record or Save on Demand.	
Duration	Total duration of the call, from the Start Time to the Release Time.	
Calling Party	The call initiator.	
Called Party	The intended recipient of the call.	
Answering Party	The party who ultimately answered the call.	
Dialed Digits	Any dialed digits to set up the call (only required for PSTN gateway calls).	
Direction	Inbound or Outbound.	
Release Cause	Normal	Answered call.
	Missed	Incoming call to targeted user that wasn't answered.
	Abandoned	Outgoing call from targeted user that wasn't completed.
	Conferenced *	Indicates the call leg was released as a result of the call being elevated to a conference call.
	Transferred *	Indicates the call leg was released as a result of being transferred.
Recording Type	<div> <div></div> Full Time </div> <div> <div></div> Record on Demand </div> <div> <div></div> Save on Demand </div>	
Expires	Call recording expiration date. The date after which the call recording is purged. The date is calculated based on the retention profile assigned to the call. If the call was put on legal hold or evaluated, the expiration date is presented along with a lock icon.	
System Call ID	Indicates the Original Call ID. Applicable to Skype For Business and other SIP-related integrations. This ID can be used to correlate call records to the original calls.	
Conversation ID	Indicates the Skype For Business Conversation ID. This ID can be used	

Field	Description
	to correlate between audio/video and content sharing calls made by a user from SFB client as part of one conversation.
Conference ID	Indicates the Skype For Business Conference ID. This ID identifies the conference to which the call was connected. It can be used to correlate between audio/video and content sharing calls made by a user from a Skype for Business client.
Media Status Reason	Corresponding Media Reason
Tags	Identifies whether a tag has been assigned to the call record.
Release Calls Details	Release Cause of the Original Call. Applicable to Skype For Business. Example: '51004; reason=""Action initiated by user";51004.

Saving Search Queries

You can save search criteria as a query and then later retrieve it. Save the search criteria by

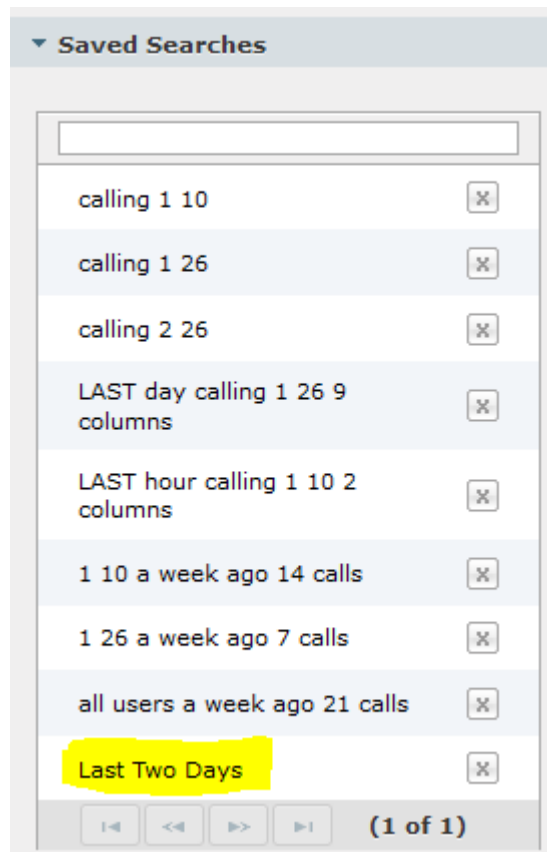

selecting the  in the bottom right-hand corner of the screen. The saved query is added to the Saved Searches pane in the bottom left-hand corner of the screen. In the figure below "Last Two Days" is added as the saved query.

Figure 6-107: Save Search Query

Deleting Calls and Instant Messages

SmartTAP 360° Live is deployed in several recording scenarios such as compliance, quality monitoring and for malicious call recordings. While regulatory compliance requires that recordings are deleted automatically after a regulated time frame, quality monitoring scenarios requires the ability to manually delete recordings. Consequently, calls and instant messages conversations can be deleted on demand by users with the appropriate permissions in security profiles (see [Managing Security Profiles](#) on page 112).

- This feature is enabled through the SmartTAP 360° Live Call Deletion license (SW/SMTP/CALLDEL)
- If a user is on Legal Hold, their Calls and Instant Messaging cannot be deleted (see [Managing Users](#) on page 105)
- When calls or messages are deleted, any associated evaluations are also deleted.

➤ To delete calls:

1. Search for calls according to desired search criteria (see [Searching for Calls](#) on page 142).
2. Select the  button adjacent to each call that you wish to delete. The button becomes red .

Only the filtered and selected recordings are deleted.

Figure 6-108: Delete Calls

Playing Back Recorded Media

This section describes how to listen to call audio, view a call video and view a desktop application recording. Use the Player interface, available when a call is selected and shown below, to listen to, email, or download a call recording.

The Web browser support for the SmartTAP 360° Live HTML5 player is listed below:

- **Audio:**

- ✓ Audio Playback: Microsoft Edge Version: 88.0.705.56, Google Chrome Ver. 58 and later, Mozilla Firefox Ver. 85.0 and later
- ✓ Wave form rendering: Microsoft Edge Version 88.0.705.56, Google Chrome Ver. 58 and later, Mozilla Firefox Ver. 85.0 and later
- ✓ Stereo wave form rendering (for recordings **other than Microsoft Teams**): Microsoft Edge Version 88.0.705.56, Google Chrome Ver. 58 and later, Mozilla Firefox Ver. 85.0 and later
- ✓ Wave form rendering: Microsoft Edge Version 88.0.705.56, Google Chrome Ver. 58 and later, Mozilla Firefox Ver. 85.0 and later
- ✓ For **Microsoft Teams Native recording**, audio mixed – on waveform is recorded.
- ✓ Playing while loading: Microsoft Edge Version 88.0.705.56, Google Chrome Ver. 58 and later

- **Video:**

- ✓ Video: Microsoft Edge Version 88.0.705.56, Google Chrome Ver. 58 and later, Mozilla Firefox Ver. 85.0 and later
- ✓ Playback with 'Display Video' selected is limited to five concurrent sessions.

- Skype for Business and Microsoft Teams Desktop Application Recording (Video and Screen Sharing): Skype for Business Video and Screen Sharing over VBSS (Video Based Screen Sharing) recording is supported. Refer to the link below for more information on Skype for Business VBSS client and server support:

Table 6-45: Player Screen Overview

Field	Description
	Call details for the selected call
	Volume control
	Status and other information (see more information below).
	Playback the entire recording or a selected segment.
	Pause the playback of the recording.
	Rewind to immediately replay the selected segment of the recording from the start point of the segment.
 click  to replay the segment.	Return to the start point of the selected segment of the recording,. then
	Playback speed in milliseconds.
	<p>Send call information to an excel worksheet. When this option is selected, you can use the arrow keys to select those columns to include in your report.</p> 
	Email audio call information. When this option is selected, the Email Audio dialog opens. See Sending Email on page 107
	Save search call query. You can save the search query results and then easily retrieve these call details at a later time. See Searching for Calls on page 142
	Download call information to your PC. When this option is selected, the Download Media dialog opens. See Downloading Call Recordings on page 166

Listening to Call and Viewing Call Video

This section describes how to listen to a call and view a video.

➤ To listen to a call and view call video:

1. Follow the instructions described in [Searching for Calls](#) on page 142 to search for calls.
2. If you wish to view call video, ensure that you have selected the “Display Video” check box.
3. In the retrieved calls list, select the desired call entry that you wish to listen.

The call recorder is displayed with the frequency spectrum of the call.

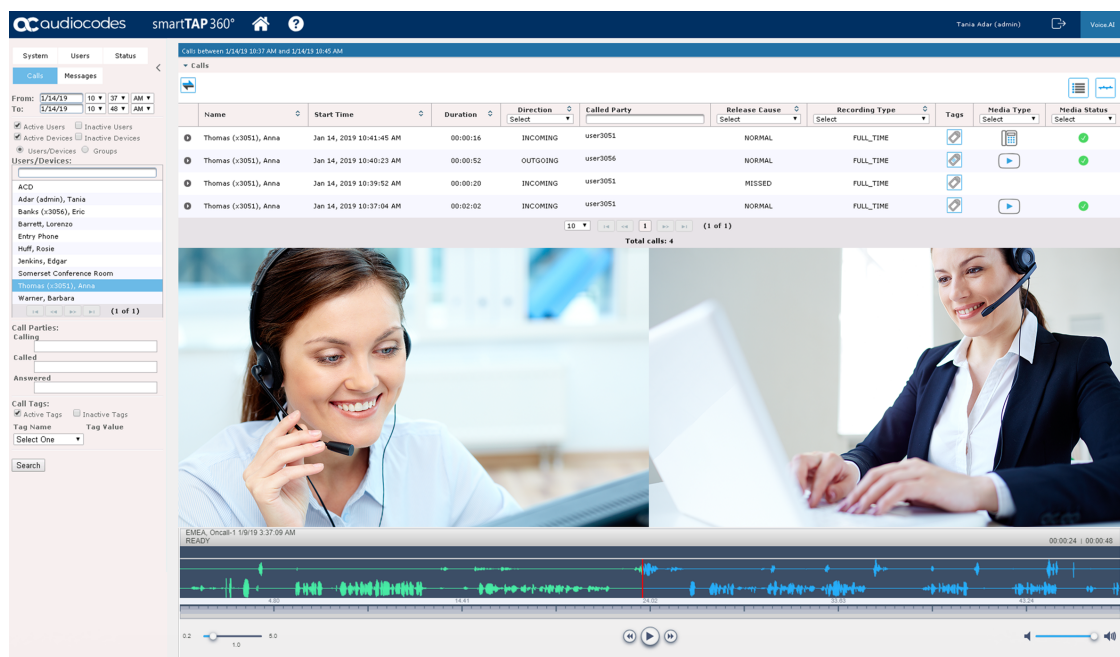

4. Click the  button to start listening to the call and/or view the video (if you selected “Display Video” check box); the button changes to  PAUSE while the call is playing, to allow the administrator to pause the player while playing the audio or video.

Figure 6-113: Viewing Video

When the call is played back, the played back segments are colored green and the audio signaling playback data is displayed at the top of the dialog (shown by the yellow lines at the top of the dialog below).

You can also view multiple participants in a conference as shown in the figure below:

Figure 6-114: Multiple Conference Participants

Figure 6-115: Playback Audio Signaling Data

Information at the top-left hand side of the screen includes the user name, date and time and status e.g. “PLAYING”. On the top-right hand side of the screen includes the elapsed playback time and the total playing time.

The timeline of the recording segments (in minutes and seconds) is displayed below the recording signal data.

5. Manipulate the call recording in the following ways:

- Move the cursor to any random point in the recording and left-click and release;

- The selected segment is colored green. Click the  button; the call recording is played from the left-click selection point forward (shown by the red line in the figure below).

Figure 6-116: Random Selection Point in Call Recording

- Left-click and drag the mouse over the desired segment in the call recording and

release; the selected segment is shaded blue. Click the  button; the shaded segment of the call recording is played back.

Figure 6-117: Highlighted Segment in Call Recording

- Select the  button to return to the start point of the selection; the selected segment is immediately played back.
- Select the  button to return to the start point of the selection. You must then click the  button to playback the selected segment.

Managing Microsoft Teams Video Calls

The following describes the recording and playback/download factors for managing Microsoft Teams video calls.

■ Video Recording

- SmartTAP supports the recording of up to 4 video streams provided by the Microsoft Recording API.
- If the number of video-enabled call participants exceeds the number of configured streams and/or exceeds the maximum available streams (4) then existing streams are replaced accordingly. The replacement logic is managed by the Bot and is mainly based on dominant speakers prioritization where targeted users have priority i.e. if they start video they are recorded in any case.
- Each stream is recorded in a separate media file.
- Peer-to-Peer calls are stored with a resolution of 720p per stream, Conference calls are stored with a resolution of 360p per stream

■ Playback\download:

- During playback, a composite screen is displayed consisting of up to four video tiles and Video and Screen Sharing (if available)
- Video Tiles represent one tile per recorded stream
- Video Tiles may be set as a grid, or in line in case Video and Screen Sharing is active
- The Target compliance user's tile has highlighted borders.
- Each tile is labeled with Participant identifier (Name- if available)
- Media files of a single call are processed (rescaled, mixed, composed, etc) prior to playback\download
- In case, media is stored in Azure Blob, media files are downloaded to server and then processed

Figure 6-118: Video Playback (Add Figure)

Skype for Business and Teams Video and Screen Sharing

This section describes how to playback a Video and Screen Sharing recording.

➤ To playback Video and Screen Sharing recording :

1. Follow the instructions described in [Searching for Calls](#) on page 142 to search for calls.
2. From the Media Type drop-down list, select Sharing to filter the search results for the Video and Screen Sharing recordings.

3. Double-click a row to display the Video and Screen Sharing recording.

Figure 6-121: Video and Screen Sharing Recording

4. Click the  button to playback the selected segment; view the keyboard and mouse actions of the user for the recorded application segment.

5. Click the  button to return to the start point of the selection; the selected segment is immediately played back.

6. Click the  button to return to the start point of the selection. You must then click the  button to playback the selected segment.

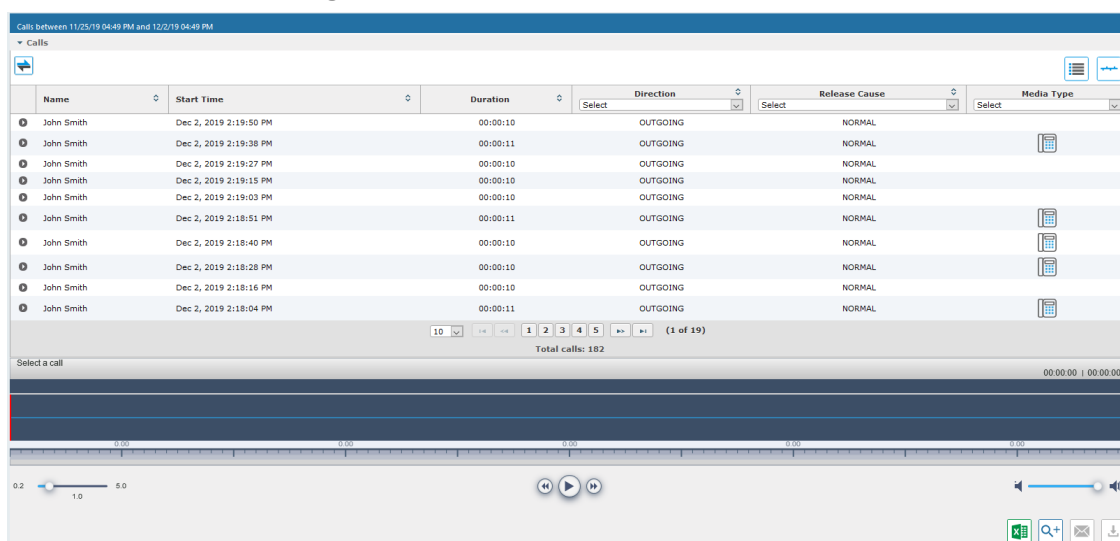

Time Line View

You can view call data for a specific user/device over a time line. Zooming in using the mouse roller or navigation buttons enables you to view the details of call.

➤ To manage calls using the timeline feature:

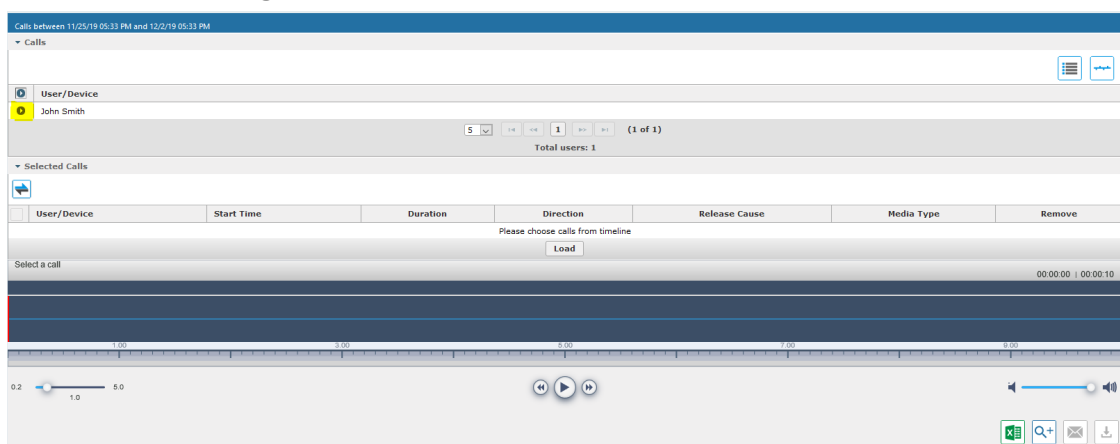

1. Follow the instructions described in [Searching for Calls](#) on page 142 to search for calls.

Figure 6-122: Calls List

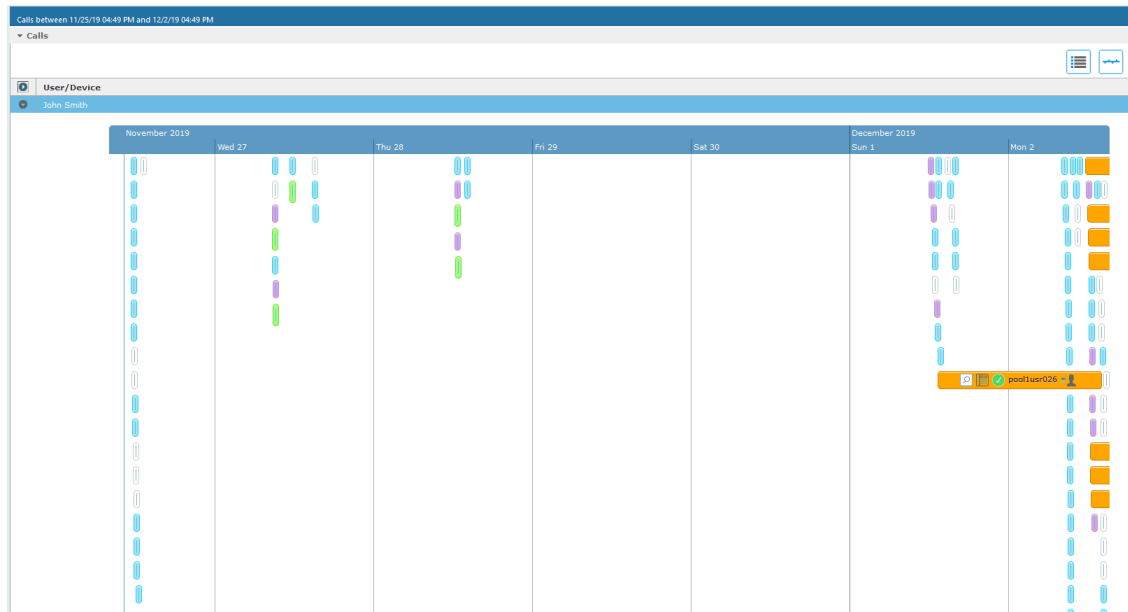

2. Select the Timeline view icon . A screen similar to the following is displayed:

Figure 6-123: Select User in Timeline View

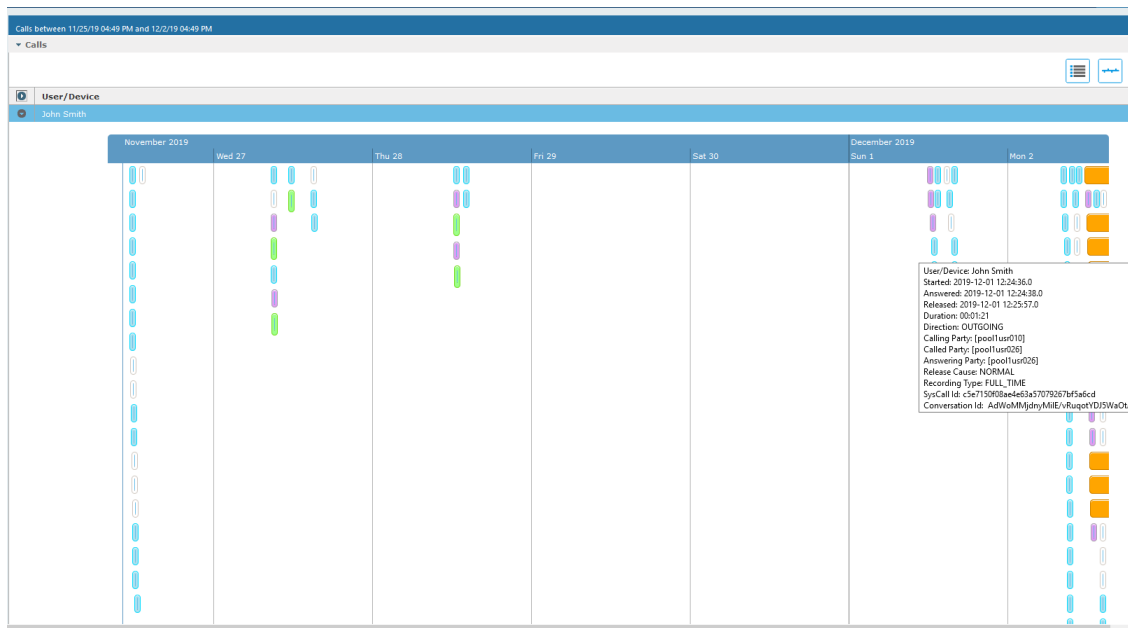

3. Select the arrow adjacent to the User/Device whose timeline you wish to view. The Calls List is displayed:

Figure 6-124: User Timeline

4. Hover over a call event to view details of the call.

Figure 6-125: Call Event Details

5. Zoom in on a specific day to view the details using either the mouse roller or the navigation buttons that are highlighted below.

Figure 6-126: Zoom In

- In timeline view, the calls are grouped according to their target type. Each target type is represented by a different color (see table below). Calls for the same target type are displayed as events in a continuous timeline.
- Call events from one or more timelines can be selected to a playable table. Calls from the playable list can be loaded to the player by clicking an icon in the timeline and then clicking the Load button.

Figure 6-127: Call Events from Multiple Timelines

The following rules are applied when more than one call is selected to play from the playable list:

- Only calls for the same user can be selected to be played together.
- If multiple selected segments include video or Video and Screen Sharing, the total playback time should not exceed six hours, otherwise the total playback time can be up to 24 hours.
- Only calls of different types can overlap:
 - An Audio call segment can overlap with a Video and Screen Sharing call segment
 - An Audio Video call segment can overlap with a Video and Screen Sharing call segment
 - An Audio call segment can't overlap with another Audio or Audio Video call segment
 - A Video and Screen Sharing call segment can't overlap with another Video and Screen Sharing call segment

Table 6-46: Call Events Description

Media Type	Description
 pool2usr	Represents an Audio call.
 pool2u	Represents a Video call
 pool2usr027	Represents a Video and Screen Sharing call
 pool2usr010	Represents a call that has no media. When a call is abandoned or missed, this target is displayed without the red warning.

Each event includes different call information statuses as shown in the table below:

Table 6-47: Call Icons

Item	Icon	Description
Call Details		Right-click the magnifying glass icon to view the call details.
Media Type		Indicates an audio call.
		Indicates a video call
		Indicates a desktop application call
Media Status		Indicates a successful call
		Indicates a call with silent media
		Indicates an unsuccessful call.
Called Party and Call Direction		Indicates an incoming call.
		Indicates an outgoing call.

1. Select the check box adjacent to each call that you wish to playback and click **Load**. The Media Player is loaded.

Figure 6-128: Load Media Player

The screenshot displays the 'Load Media Player' interface. At the top, there are two user timelines for 'Bob Taylor' and 'John Smith', each showing a calendar view from December 3, 2019, to December 9, 2019. Below the timelines, a 'Selected Calls' table is visible. The table has columns for 'User/Device', 'Start Time', 'Duration', 'Direction', 'Release Cause', 'Media Type', and 'Remove'. Two calls are listed, both for 'Bob Taylor' on 'Dec 3, 2019'. The first call starts at 9:04:34 AM with a duration of 00:00:57, and the second call starts at 9:03:21 AM with a duration of 00:01:07. Both calls are 'OUTGOING' and have a 'NORMAL' release cause. The 'Media Type' column shows icons for audio and video. Below the table, there is a 'Load' button and a 'Select a call' dropdown. At the bottom, there is a media player control bar with a timeline, volume controls, and playback buttons.

User/Device	Start Time	Duration	Direction	Release Cause	Media Type	Remove
Bob Taylor	Dec 3, 2019 9:04:34 AM	00:00:57	OUTGOING	NORMAL	Audio	Remove
Bob Taylor	Dec 3, 2019 9:03:21 AM	00:01:07	OUTGOING	NORMAL	Video	Remove

The selected files are loaded to the Media Player.

Figure 6-129: Loading Files to Media Player

This screenshot shows the 'Loading Files to Media Player' interface. It is similar to Figure 6-128, but with additional features. A 'Display Video' checkbox is now checked. The 'Selected Calls' table is the same as in Figure 6-128. Below the table, the 'Load' button is now labeled 'LOADING'. The media player control bar at the bottom shows a timeline with a red bar indicating the current playback position. The volume controls and playback buttons are also present.

User/Device	Start Time	Duration	Direction	Release Cause	Media Type	Remove
Bob Taylor	Dec 3, 2019 9:04:34 AM	00:00:57	OUTGOING	NORMAL	Audio	Remove
Bob Taylor	Dec 3, 2019 9:03:21 AM	00:01:07	OUTGOING	NORMAL	Video	Remove

Figure 6-130: Files Ready to Play

The screenshot displays the SmartTAP 360° Live interface. At the top, there are two rows of call logs for 'Bob Taylor' and 'John Smith'. Below these, a table titled 'Selected Calls' shows two entries for Bob Taylor. The bottom section shows a timeline for 'Bob Taylor 12/3/19 9:03:21 AM' with a play button icon.

User/Device	Start Time	Duration	Direction	Release Cause	Media Type	Remove
Bob Taylor	Dec 3, 2019 9:04:34 AM	00:00:57	OUTGOING	NORMAL	Audio	[X]
Bob Taylor	Dec 3, 2019 9:03:21 AM	00:01:07	OUTGOING	NORMAL	Audio	[X]

- Click  to play the selected call.

Figure 6-131: Play Call

The screenshot displays the SmartTAP 360° Live interface with the call from Figure 6-130 now in progress. The 'Selected Calls' table remains the same. The bottom section shows a timeline for 'Bob Taylor 12/3/19 9:03:21 AM' with a 'PLAYING' status and a play button icon.

User/Device	Start Time	Duration	Direction	Release Cause	Media Type	Remove
Bob Taylor	Dec 3, 2019 9:04:34 AM	00:00:57	OUTGOING	NORMAL	Audio	[X]
Bob Taylor	Dec 3, 2019 9:03:21 AM	00:01:07	OUTGOING	NORMAL	Audio	[X]

Downloading Call Recordings

You can download both audio and video call recordings components to your PC.

Download with 'Display Video' selected is limited to five concurrent sessions.

Downloading an Audio Call

This section describes how to download an audio call.

➤ **To download an audio call:**

1. Follow the instructions in [Searching for Calls](#) on page 142 to search for the call to download.
2. From the Media Type drop-down list, select **Audio**.
3. Select the call that you wish to download.
4. The Player screen opens; click  to open the download menu.
5. Select 'Basic' or 'Advanced' format depending on file formats, encoding, and mixing for the download files.

Field	Description
To > Cc > Bcc >	Clicking the To>, Cc>, Bcc> buttons expands and collapses the list of users within the current user's group(s). Selecting/deselecting users from this list adds / removes them. The recipient list is a comma separated list of email addresses in the format 'jsmith@example.com'. The recipient list may also include the display name of the recipient. To add a display name for a recipient, the recipient's email address should be in angled brackets, for example: John Smith <jsmith@example.com>
Subject	Subject of the email.

Field	Description
Attachments	List of attachments included with this email message. Clicking the X next to the attachment removes the attachment from the email.
Body	Body of the email.
SUBMIT	Sends the email.
CANCEL	Cancels the email.

6. Click **SUBMIT** to send the email.

Using the Evaluation Feature

The Evaluation tab accesses all functions related to the SmartTAP 360° Live evaluation feature. From under this tab, evaluation forms to be used for evaluations are created. Later, evaluation reviews and reports can be generated. The Evaluation Forms screens, shown in the figure below, provides access to all evaluation-related features.

Table 6-49: Evaluation Forms – New Form Subscreen

Field	Description
 New Form	Click to close the Add Form sub screen.
 New Form	Click to open the Add Form sub screen.
Name (in the New Form menu)	The name of the new form.
Description (in the New Form menu)	The description of the new form.
 (in the New Form menu)	Click to create a new form.

This section includes the following procedures:

- [Adding a New Evaluation Form](#) below
- [Viewing and Copying an Evaluation Form](#) on page 178
- [Adding a New Section \[Evaluation Forms\]](#) on page 179
- [Adding Questions and Answers to an Evaluation Form](#) on page 180
- [Finalizing Forms](#) on page 183

Adding a New Evaluation Form

This section describes how to add a new evaluation form.

➤ To add a new evaluation form:

1. Open the Evaluation Forms screen (**Evaluation** tab > **Evaluation** Folder > **Evaluation Forms**).
2. In the New Form subscreen, enter the Name of the new form and a Description.
3. Click  to create the form
4. The new form is added to the display with an (asterisk)  on the rightmost column.
5. Use the Modify  button to define the form.

➤ To rename a form:

1. Open the Evaluation Forms screen (**Evaluation** tab > **Evaluation** folder > **Evaluation Forms**).
2. In the Evaluation Forms screen, click the 'Name' of the form to rename.
3. Change the Name and/or Description of the form in the 'New Form' subscreen.

4. Click **Add** to rename the form.

Figure 6-139: Evaluation Forms

The screenshot shows the 'Evaluation Forms' interface. At the top, there is a 'Change Name' dialog box with the following fields:

- Name:** Agent Scoring
- Description:** Agent Scoring Evaluation form
- Buttons:** Change, Cancel

Below the dialog box is a table of evaluation forms:

Name (click to change) ⚡	Status	Finalized Date ⚡	Modify	View/Copy	Delete
<u>Agent Scoring</u>	FINAL	Apr 24, 2018			
* <u>Agent Scoring Draft</u>	DRAFT	N/A			
* <u>Agentscoring_002</u>	DRAFT	N/A			
<u>Customer Service</u>	FINAL	Nov 17, 2014			
* <u>guy_vest</u>	DRAFT	N/A			
<u>Sales</u>	DRAFT	N/A			
<u>test</u>	FINAL	Sep 7, 2017			

At the bottom of the table, there is a pagination bar showing '(1 of 1)' and navigation buttons.

Viewing and Copying an Evaluation Form

This section describes how to view and copy an evaluation form.

➤ **To view/copy an evaluation form:**

1. Open the form to view or copy by clicking the View/Copy button  in the row associated with the form in the Evaluation Forms main screen.
2. Enter the Name for the new form and click **Copy As**.
3. The View closes and the new form is added to the list of forms in the 'Evaluation Forms' screen.
4. Add a New Section.

Adding a New Section [Evaluation Forms]

This section describes how to add a new section to an evaluation form.

➤ **To add a new section to an evaluation form:**

1. Open the form (**Evaluation** tab > **Evaluation** folder > **Evaluation Forms**).
2. Click  on the row listing the form to change to open it.

Figure 6-141: Sections of Evaluation Form – New Section Subscreen

	Name (click to change)	Max. Points	Weight	Modify	Delete	Move
	<u>Greeting</u>	4	80%			up down
	<u>Account Verification</u>	1	20%			up down
*	<u>djgztd</u>	0	0%			up down

Back

3. [Use the table below as reference] Enter the new section Name and Description in the New Section subscreen.
4. Click **Add Section** to create the new section; the new Section appears in the form with an asterisk * on the leftmost column indicating that the form is missing fields and cannot be finalized.

Table 6-51: Sections of Evaluation Form – Field Descriptions

Field	Description
	Click to close the New Section subscreen.
	Click to open the New Section subscreen.
Name (in new section subscreen)	The name of the new Section.
Description	The description of the new Section.
	Create a new section.

Adding Questions and Answers to an Evaluation Form

This section describes how to add questions to an evaluation form.

➤ To add New Questions [Evaluation Forms]:

Figure 6-142: Sections of Evaluation Form – New Questions Subscreen

Field	Description
	Click to open the New Question subscreen.
Question	The name of the new Question.
Description	The description of the new Question.
	Create a new Question.

➤ **To add a New Question:**

1. Open the form (**Evaluation** tab > **Evaluation** folder > **Evaluation Forms**).
2. Click  on the row listing the Form to change, to open it.
3. Click  on the row listing the Section to change, to open it.
4. Enter the new Question Name and Description in the New Question subscreen.
5. Click  to create the new Question; the new Question appears in the form with an asterisk * on the leftmost column indicating that the form is missing fields and cannot be finalized.

➤ **To add a New Answer [Evaluation Forms]:**

Table 6-53: Sections of Evaluation Form – New Answer Subscreen

Field	Description
Answer	Acceptable answer to the associated question.
Weight	Weight associated with this answer.
Description	Description of the answer.
Instant fail	Check if this answer causes an instant fail during evaluation.
	Add new answer.

➤ **To add a new answer:**

1. Open the form (**Evaluation** tab > **Evaluation** folder > **Evaluation Forms** > **Form**).
2. Click  on the row listing the Form to change, to open it.

- Click  on the row listing the Section to change, to open it.
- Click  on the row listing the Question to launch the Answer screen.

Figure 6-143: Sections of Evaluation Form - New Answer Subscreen

- Enter the new Answer information.

You must provide at least two answers for each question.

- Click  to create the new Answer; the new Answer will appear in the form with an asterisk * on the leftmost column indicating that the form is missing fields and cannot be finalized. There is a minimum of two (2) answers required before a form can be finalized.

Finalizing Forms

This section describes how to finalize forms.

➤ To finalize a Form [Evaluation Forms]:

Figure 6-144: Form Subscreen

	Name (click to change)	Max. Points	Weight	Modify	Delete	Move
	Greeting	4	80%			up down
	Account Verification	1	20%			up down

➤ To finalize a form:

- Open the form (**Evaluation** tab > **Evaluation** folder > **Evaluation Forms** > **Form**).
- Click  to open the Finalize Evaluation form subscreen.

3. Click **Finalize** to change the form status from DRAFT to FINAL; the form Status on the Evaluation Forms screen changes to FINAL, and  is no longer available to change the form.

Performing an Evaluation

An administrator with privileges to perform an evaluation selects a finalized evaluation form, selects the call to evaluate, and from the Perform Evaluation screen, selects the appropriate answers to the questions in the evaluation form.

When all answers in the evaluation form are provided, the user may save the evaluation for later review.

Table 6-60: Search Messages Navigation Screen - Messages Tab

Field	Description
From:	Earliest date and time to search from. Click the date field for a calendar to pop up showing one month at a time. Use the dropdown to change the time of day.
To:	Latest date and time to search to. Click the date field for a calendar to pop up showing one month at a time. Use the dropdown to change the time of day.
Active Users	Users whose account is enabled in the SmartTAP 360° Live application.
Inactive Users	Users whose account has been deleted from the SmartTAP 360° Live application.
Users	Only Users will be listed in the Search list. Either the Users or the Groups option must be selected.

Field	Description
Groups	Only Groups will be listed in the Search list. Either the Users option or the Groups option must be selected.
Users (list)	Select the User to search for by clicking their name. To select multiple Users, hold down the <Ctrl> key and click each User to search for. To select a range of Users, hold down the <shift> key, click the User at the top of the range and the User at the bottom of the range.
Groups (list)	Select the Group to search for by clicking its name. To select multiple Groups, hold down the <Ctrl> key and click each Group to search for. To select a range of Groups, hold down the <shift> key, click the Group at the top of the range and the Group at the bottom of the range. Calls for all users in the groups selected will be searched.
Text	Searches for message conversations that contain the entered text. The search string may contain words to search for, and 'operators' (AND, NOT, words contribution, exact match, and more) to specify search criteria.
Search	Click to search and display results.

Searching for Messages

This section shows how to search for messages.

➤ To search for messages:

1. Click the **Messages** tab to open the Search Messages screen.

Figure 6-154: Instant Message Search

2. In the Search Navigation screen (left side of the screen), enter the time range, and then select the type of Users.

When searching for messages within a time range, only conversations that contain messages within the provided time range will be returned in the search results.

3. Select either the Users or the Groups option.
 - Selecting the User option changes the display below to show a list of Users.
 - Selecting the Groups option changes the display below to show a list of Groups and Sub Groups (if the Search Sub Groups option is selected).
4. Select one of more User or Groups by highlighting them in the list (see the notes above on Search Calls Navigation screen fields and on how to select more than one User or Group).
5. Optionally, enter the text for search output conversations to contain. Instant messages and conversations can be filtered using SmartTAP 360° Live's Full-Text search feature built on top of 'MySQL Boolean Full-Text Search'. The search field value is logically ANDed and applied to the instant messages search criteria. All instant message conversations that have at least one message with the matching search text as part of the message body will be displayed in the instant message conversations table. MySQL Boolean full-text search supports the operators shown in the table below. More detailed examples can be found inside MySQL online documentation, available at <http://dev.mysql.com/doc/refman/5.6/en/fulltext-boolean.html>
6. If files are sent between two call parties, you can search for the filename in the free 'Text' field (see example "File Transfer Messages" in [Searching for Messages](#) on the previous page).

Table 6-61: Operators Supported by MySQL Boolean Full-Text Search

Operator	Description	Example
+	A leading or trailing plus sign indicates that this word must be present in each message that is returned.	'+apple +juice' Find messages that contain both words. '+apple juice' Search messages that contain the word 'apple', but rank rows higher if they also contain 'juice'.
-	A leading or trailing minus sign indicates that this word must not be present in any of the rows that are returned.	'+apple -juice' Find messages that contain the word 'apple' but not 'juice'.
(no operator)	By default (when neither + nor - is specified), the word is optional, but the conversations or messages that contain it are rated higher.	'apple -juice' Search rows that contain at least one of the two words.
@distance	It tests whether two or more words all	""word1 word2 word3" @8'

Operator	Description	Example
	start within a specified distance from each other, measured in words.	Search for matching messages where word1, word2 and word3 are separated by a distance of 8 words from each other.
> <	These two operators are used to change a word's contribution to the relevance value that is assigned to a conversation or message. The > operator increases the contribution and the < operator decreases it.	'+apple +(>>turnover <strudel)' Find messages that contain the words 'apple' and 'turnover' or 'apple' and 'strudel' (in any order), but rank 'apple turnover' higher than 'apple strudel'.
()	Parentheses group words into subexpressions. Parenthesized groups can be nested.	
~	A leading tilde acts as a negation operator, causing the word's contribution to the message's relevance to be negative. A message containing such a word is rated lower than others, but is not excluded altogether, as it would be with the - operator.	'+apple ~macintosh' Find messages that contain the word 'apple', but if the message also contains the word 'macintosh', rate it lower than if message does not.
*	The asterisk serves as the truncation (or wildcard) operator. Unlike the other operators, it is appended to the word to be affected. Words match if they begin with the word preceding the * operator.	'apple*' Find messages that contain words such as 'apple', 'apples', 'applesauce' etc.
"	A phrase that is enclosed within double quote (""") characters matches only rows that contain the phrase literally, as it was typed.	"some words" Find messages that contain the exact phrase "some words".

Some words (also known as stopwords) are ignored in full-text searches. In SmartTAP 360° Live, the minimum length of the word for full-text searches is 2.

- Click to start the search for the Messages matching the search criteria; the results are displayed in the Search Messages Results screen to the right.

8. From the Chat Type drop-down list, select either Chat or Group Chat; the results are filtered accordingly.

The search result fields are described in the table below.

Table 6-62: Search Messages Results

Field	Description
User	User name. Clicking this header sorts the search results in Ascending/Descending order, alternating with each click.
First Message Time	Date and time of the first message in the conversation. Clicking this header sorts the search results in Ascending/Descending order alternating with each click.
Last Message Time	Date and time of the last message in the conversation. Clicking this header sorts the search results in Ascending/Descending order alternating with each click.
Messaging Parties	The column represents messaging parties, parties which sent or received the conversation messages.
Chat Type	The following chat types can be chosen: <ul style="list-style-type: none"> ■ Chat: person-to-person chat ■ Group Chat: chat for two or more persons. For Group Chat, the Conference ID is also displayed.

9. Click the arrow adjacent to the message whose conversation details you wish to view.

Example conversations are displayed below. Note that when files are sent between two parties, the file information is also displayed in the conversation dialog (see example “File Transfer Messages” in [Searching for Messages](#) on page 195).

Table 6-63: Message Conversation Content – Field Descriptions

Field	Description
Begin Time	Specifies the time of the first message of the conversation.
End Time	Specifies the time of the last message of the conversation.
Search text	Filters the conversation display to show messages containing the search text. In addition, this field allows the searching for filenames (where Files have been transferred between parties).
Participants	Parties who received or sent messages of the conversation.
	Filter the conversation to display messages of a specific participant.
	Export the conversation messages to a PDF file (including file transfer information from messages).

SmartTAP 360° Live displays a collection of messages in one conversation based on the time and participants.

Managing Microsoft Teams Instant Messages

SmartTAP utilizes Microsoft Graph Teams Export API for recording Microsoft Teams Chat messages. Before you can view Instant Messages, the following Microsoft Teams prerequisites and licenses must be installed:

[Prerequisites to access Teams Export APIs](#)

Microsoft Beta API, as well as the feature itself is not yet supported for production applications.

Features:

- When Editing a chat message, the new message content will be replaced with the original one, and “This message has been edited” will be displayed on top of it.
- When Deleting a chat message, the content of the message will still be displayed, and “This message has been deleted” will be displayed on top of it.
- Clicking ‘Undo’ on deleted message will be considered as Edited.
- “HTML based messages, such as Formatted\Tables\Links are not supported, the content will be displayed only”.
- Text formatting is not reflected in Teams Chat messages (Bold\Underline\Italic\etc.)
- Emojis, Gifs and any other special content will not be displayed in Teams chat messages.
- Channel messages are not supported
- URLs of attached or transferred files are displayed in SmartTAP when a chat is included the attachment/transfer (see below)

7 Single Sign-On for SmartTAP 360° Live

This chapter describes the Single Sign-On functionality for SmartTAP 360° Live. Single Sign-On (SSO) simplifies the login process for domain users. The user logs into their machine using domain credentials and then attempts to access the SmartTAP 360° Live Web server via a Web browser (Microsoft Edge, Chrome or Firefox). Without SSO, the user is directed to a simple login form in which a Username and Password are entered and given to SmartTAP 360° Live to authenticate. When SSO is enabled, the user is authenticated in the background through Active Directory using the same domain credentials that were used to log into the machine. This bypasses the login page and immediately opens the Welcome page. This allows for a streamlined entry to the SmartTAP 360° Live Web interface and for quick access to different SmartTAP 360° Live pages.

Figure 7-1: Simple and Protected GSS-API Negotiation Mechanism (SPNEGO) Web Authentication Service

- Before getting started, contact AudioCodes support to make sure your network is SSO-ready. In some environments, problems may arise if users from two different domains attempt to perform SSO to the SmartTAP 360° Live server.
- SSO was successfully tested with both Client Users and the SmartTAP 360° Live server on the same domain with a single LDAP Active Directory server.
- SSO was successfully tested with Client Users on one domain and with the SmartTAP 360° Live server on a separate domain, with one-way forest trust between the domains.

■ Prerequisites

LDAP configuration is optional if all Clients using SSO were manually added to the SmartTAP 360° Live database. If they were not manually added, then LDAP must be configured so that SmartTAP 360° Live can validate the user and find the user's Roles/Permissions (see [Configuring SSL](#) on page 89)

■ Terms

Before configuration, it's best to get acquainted with the terms used (see also the Variables List in Section Variables List below). Use the table below as a reference.

Table 7-1: Terms

Term	Description
{username}	New domain user required for SmartTAP 360° Live to authenticate through SSO. Referred to as the 'SSO User'. Use a different user for SSO and LDAP if possible, in order to simplify later steps and facilitate troubleshooting. In this Appendix, testUser is used.
{domain}	The complete name of the domain to be used for SSO, for example, myDomain.local.
{realm}	The security realm to be used for authenticating the SSO User. Can be different to the realm of the SmartTAP 360° Live server and should be the realm of the SSO User. The realm must be specified in capital letters. In the example of a single domain used in this Appendix, the realm is the same as {domain}: MYDOMAIN.LOCAL.
{kdc}	The fully qualified domain name (FQDN) of the Key Distribution Center (KDC) which must be the Active Directory server to be used to authenticate the SSO User (created in the next step). Example: ad.myDomain.local
{user password}	The password defined for the SSO User when created. In this Appendix: testUserPassword
{short domain}	Shortened version of {domain} used to reference user logins such as myDomain\userName. Using the same example as above, it would be just myDomain.
{hostname}	The fully qualified domain name (FQDN) of the SmartTAP 360° Live server. Must be in the form {machine name}.{domain}. Example: SmartTAP 360° Live.myDomain.local. If a CNAME alias is used to map an unfriendly machine name to a friendlier one such as SmartTAP 360° Live, the original machine name must be used.
{principal}	Special string defining a service running on a host within a security realm, in this case, HTTP/{hostname}@{realm} Example: HTTP/SmartTAP 360° Live.myDomain.local@MYDOMAIN.LOCAL

Single Sign-On Variables

■ Variable List:

For reference, note your variables here. It may be useful to print out this page and write them all down, or to fill in these details in this or another document.

{username} _____
{user password} _____
{domain} _____
{short domain} _____
{realm} _____
{hostname} _____
{kdc} _____
{principal} _____

■ Validate the Hostname to be Used for the Principal Name

A CNAME alias for the SmartTAP 360° Live server can cause problems when used as part of the Principal Name. A Client machine will request a Kerberos ticket for the FQDN using the actual hostname, not the version using the CNAME. So the Principal to be used must contain the name that the Client will be requesting.

Validate that the hostname is OK to use in the Principal by pinging the name from the command shell:

```
ping {hostname}
```

The command shell then prints out

```
Pinging {ping destination name} [IP Address]
```

If {ping destination name} is the same as {hostname}, then this is the correct hostname to use for the Principal. If different, then the correct hostname must be investigated further. Most likely, {ping destination name} is the correct one to use. However, SSO may have to be configured in SmartTAP 360° Live and Wireshark run in order to see what hostname the Client machine will use when requesting a ticket from Kerberos.

■ Windows KTPASS Command and Choice of User

Active Directory must then be commanded to map the HTTP service on the SmartTAP 360° Live server to the newly created user. The ktpass command included on Windows servers will be used. It must also be run on the Active Directory server.

ktpass changes the SSO user's attributes. It strips the realm from the data specified in the command when setting the user attribute. The realm must be specified in the command as it will be part of the next attribute that is modified. Using the setspn command does the same thing. The user's userPrincipalName is then changed to be the complete Principal Name. This makes it appear as if the user's login ID is now the Principal Name but sAMAccountName is unchanged.

ktpass most importantly creates the keytab for the Principal. SmartTAP 360° Live does not need this file to be exported. The Client obtains an encrypted version of the keytab and sends it to SmartTAP 360° Live as part of the authentication process.

Choice of User & Security Concerns: The domain administrator for security reasons may not want to run the ktpass command with the user's password within the command arguments, as others can discover the username and password by watching the process and its input arguments.

Instead of entering the password, the domain administrator can use the `-pass *` option. The user is then prompted for the password. Although more secure, in some cases this changes the user's password within Active Directory. If this user is used by SmartTAP 360° Live for SSO only, this is acceptable. If the user is also used for LDAP, LDAP authentication will fail after the password is changed. Manually resetting the user's password in Active Directory corrects the LDAP authentication error but breaks the mapping performed by ktpass and therefore SSO fails.

The only way to use SSO and LDAP while also using the `-pass *` option is to use two separate users for SmartTAP 360° Live – one for SSO and one for LDAP. For simplicity, try to use two different users for LDAP and SSO to facilitate troubleshooting and configuration.

■ User Properties – Before and After Running ktpass

Before and after running the ktpass command, observe the changes to the SSO User to determine what user properties are modified. Use the screenshots below as reference. If the command is successful, the user's properties will not need be validated in Active Directory.

Figure 7-2: Before Running the ktpass Command

The figure shows two screenshots of the 'testUser testUser Properties' dialog box. The left screenshot shows the 'General' tab with the following information:

- User logon name: testUser@myDomain.local
- User logon name (pre-Windows 2000): MYDOMAIN\testUser
- Logon Hours... and Log On To... buttons
- Unlock account checkbox (unchecked)
- Account options:
 - User must change password at next logon (unchecked)
 - User cannot change password (checked)
 - Password never expires (checked)
 - Store password using reversible encryption (unchecked)
- Account expires:
 - Never (selected)
 - End of: Wednesday, November 26, 2014

The right screenshot shows the 'Attributes' tab with a list of attributes and their values:

Configuring Active Directory for Single Sign-On

This section describes the steps required for configuring the Active Directory for Single Sign-On.

■ Create a New Domain User:

A dedicated user called 'Single Sign On User' or 'SSO User' is required on the domain for the SmartTAP 360° Live Application Server to use for authenticating clients login attempts. The SSO User is only to be used within SmartTAP 360° Live and should not be used to log into any machine on the domain, including the SmartTAP 360° Live server. It is recommended to create this user and to select the options 'Password never expires' and 'The user cannot change password' as shown in the figure below. Assign the username a login ID of {username} and a password of {user password}.

Figure 7-4: Create a New Domain User

New Object - User

Create in: myDomain.local/Users

Password: [masked]

Confirm password: [masked]

☐ User must change password at next logon

☒ User cannot change password

☒ Password never expires

☐ Account is disabled

< Back Next > Cancel

■ Active Directory Commands - ktpass:

Run the ktpass command on the Active Directory server that corresponds to the domain for the SSO User. You must use the exact syntax shown below. This is critical for flawless SSO operation. Mistakes are difficult to troubleshoot. Note that the `-out` option is not used to output the keytab file.

```
ktpass -princ {principal} -mapuser {short domain}\{username} -pass {user password} -ptype KRB5_NT_PRINCIPAL -kvno 0 -crypto AES128-SHA1
```

The Level of the Encryption Used: SmartTAP 360° Live supports encryption types as high as AES-128 though not all Windows Server OS versions support this level of encryption. It only depends on the OS version, not on the domain's Functional Level.

- If the Active Directory server is Windows Server 2008 or higher, the `-crypto` parameter must specify AES128-SHA1.
- If the Active Directory server is Windows Server 2003, the `-crypto` parameter must specify RC4-HMAC-NT.

Example:

```
ktpass -princ HTTP/SmartTAP 360° Live.myDomain.local@MYDOMAIN.LOCAL -mapuser myDomain\testUser -pass testUserPassword -ptype KRB5_NT_PRINCIPAL -kvno 0 -crypto AES128-SHA1
```

When running flawlessly, the command outputs:

```
Targeting domain controller: <DC hostname>  
Successfully mapped {principal} to {username}.  
Key created.
```

The command may take a few minutes to propagate through the network. It's recommended to log out and then back in on any client machines that will attempt SSO, in order to speed up the process for laboratory testing. This ensures that the Client machine is not caching any Kerberos tickets that will be out of date after making changes to the User in Active Directory. If the Client machine used for testing has not previously accessed the SmartTAP 360° Live server, logging out is unnecessary.

The command parser sometimes gets invalid characters when copy/pasting the command. If you see the error `unknown option 'ûprinc'.` try manually typing the command in or try retyping all the '-' characters again. Note the error indicates ûprinc instead of -princ.

■ Verify the User's Credentials

AudioCodes has observed cases in which the ktpass command changed the user's password even when explicitly defined in the ktpass command. To avoid confusion later, make sure the user's credentials are still correct. From the command prompt on either the SmartTAP 360° Live server or the Active Directory server, run the command:

```
runas /user:{short domain}\{username} cmd
```

A new command window is opened using the SSO user's credentials. You're prompted for the SSO user's password. Enter it.

- If a new command window launches, the password is correct and you can continue to the next step.
- If the password is incorrect, an error will be displayed in the command window. Some errors indicate that the user credentials are incorrect, thus the password is no longer valid. Other errors indicate that the user credentials are OK, but the command failed for other reasons.

Error 1326: Logon failure: unknown user name or bad password indicates that the credentials are incorrect. Make sure the username and password are correct. If this error persists it means the user's password must have been changed. If this fails to run and SmartTAP 360° Live is configured with the same password, then Single Sign-On will fail. Try resetting the password in Active Directory and re-running the ktpass command to make sure the password is correct. Repeat this test to validate that the user's credentials are still known before continuing.

Error 1385: Logon failure: the user has not been granted the requested logon type at this computer indicates that the password is correct but the SSO user is disallowed from running the command. This is acceptable for testing purposes.

Single Sign-On Client Browser Settings

After enabling SSO on SmartTAP 360° Live, you should enable Integrated Windows Authentication (IWA) on your Web browser. This enables the silent authentication of the connection negotiation to the SmartTAP portal URL:

- [Enabling Microsoft Edge Browser with IWA](#) below
- [Enabling Firefox Browser with IWA](#) on the next page
- [Enabling Chrome Browser with IWA](#) on page 213

Enabling Microsoft Edge Browser with IWA

When using Microsoft Edge to open the SmartTAP Portal, users can only be authenticated silently when the browser has Integrated Windows Authentication (IWA) enabled. For Edge, Integrated Windows Authentication (IWA) only works for sites explicitly configured under the 'Local Intranet' security zone under 'Internet Options' control-panel applet. A server is recognized as part of the local Intranet Security zone when the user specifies a URL with a fully qualified name that has been explicitly configured as a local intranet site in Edge. Use the following procedure to enable silent authentication on each computer (or through policy).

➤ To enable Microsoft Edge with IWA:

1. Open the Windows Settings and search **Internet Options**.

Figure 7-5: Internet Properties

2. Click **Local intranet > Sites**.

Figure 7-6: Sites

3. Click **Advanced** -> Enter the tenant specific URL for the SmartTAP portal into the Websites text box.

Figure 7-7: Tenant URL

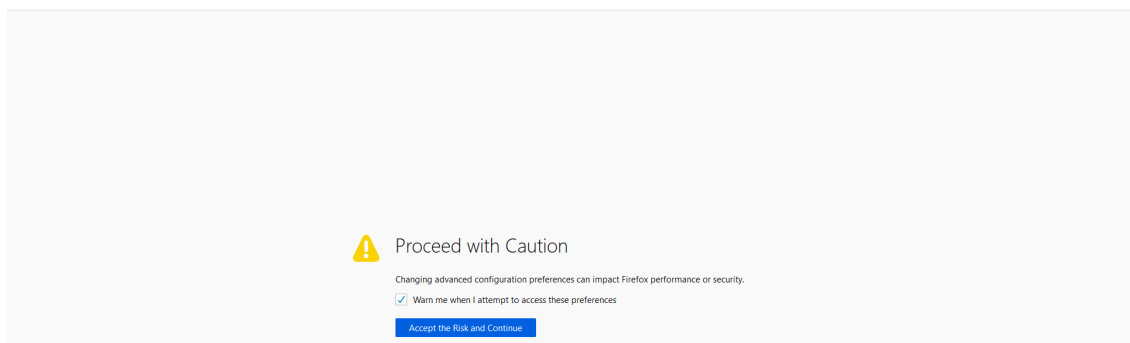

4. Click Close.

Enabling Firefox Browser with IWA

This section describes how to enable Firefox browsers with Integrated Windows Authentication (IWA) for Silent Authentication.

➤ To enable Firefox browsers with IWA:

1. Open Firefox, enter the URL **about:config** and then press Enter; Firefox warns you're updating its internal settings.

Figure 7-8: Proceed with Caution

2. Click **Accept the Risk and Continue** button to continue; Firefox lists all the internal configuration options in the Web page, allowing changes to be made.

Figure 7-9: Firefox Negotiation Options

3. In the 'Search' field, enter **network.negotiate-auth** to show all negotiation options.

Figure 7-10: Network.Negotiate-Auth

Search: network.negotiate-auth		
network.negotiate-auth.allow-non-fqdn	false	
network.negotiate-auth.allow-proxies	true	
network.negotiate-auth.delegation-uris		
network.negotiate-auth.gsslib		
network.negotiate-auth.trusted-uris		
network.negotiate-auth.using-native-gsslib	true	
network.negotiate-auth	<input checked="" type="radio"/> Boolean <input type="radio"/> Number <input type="radio"/> String	

4. Enter the tenant specific URL for the SmartTAP portal to the list of trusted URIs by updating the option **network.negotiate-auth.trusted-uris**.

Figure 7-11: Add SmartTAP 360° Live FQDN

network.negotiate-auth	
network.negotiate-auth.allow-non-fqdn	false
network.negotiate-auth.allow-proxies	true
network.negotiate-auth.delegation-uris	
network.negotiate-auth.gsslib	
network.negotiate-auth.trusted-uris	Smarttap.myDomain.local
network.negotiate-auth.using-native-gsslib	true

network.negotiate-auth ☐ Boolean ☐ Number ☒ String

5. Restart Firefox; SSO now functions on Firefox.

Additional changes may be required for Firefox. If SSO does not function immediately after these changes, see [. Troubleshooting Single Sign-On](#) on page 215

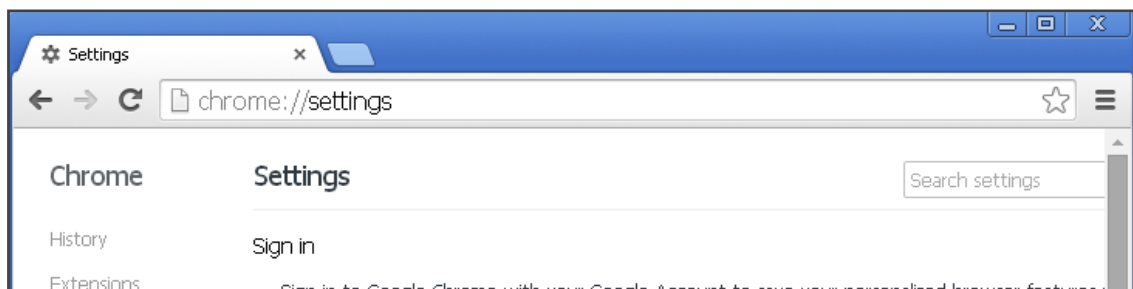

Enabling Chrome Browser with IWA

This section describes how to enable Chrome browsers with Integrated Windows Authentication (IWA) for Silent Authentication.

➤ To configure Chrome browser settings:

1. Open the Chrome browser and click the menu icon located to the right of the address field, and then select **Settings**. Alternatively, browse to `chrome://settings`.

Figure 7-12: Google Chrome Browser Settings

2. Scroll down to the bottom of the page and click the link Show advanced settings. If the advanced settings are already displayed, you can skip this step.

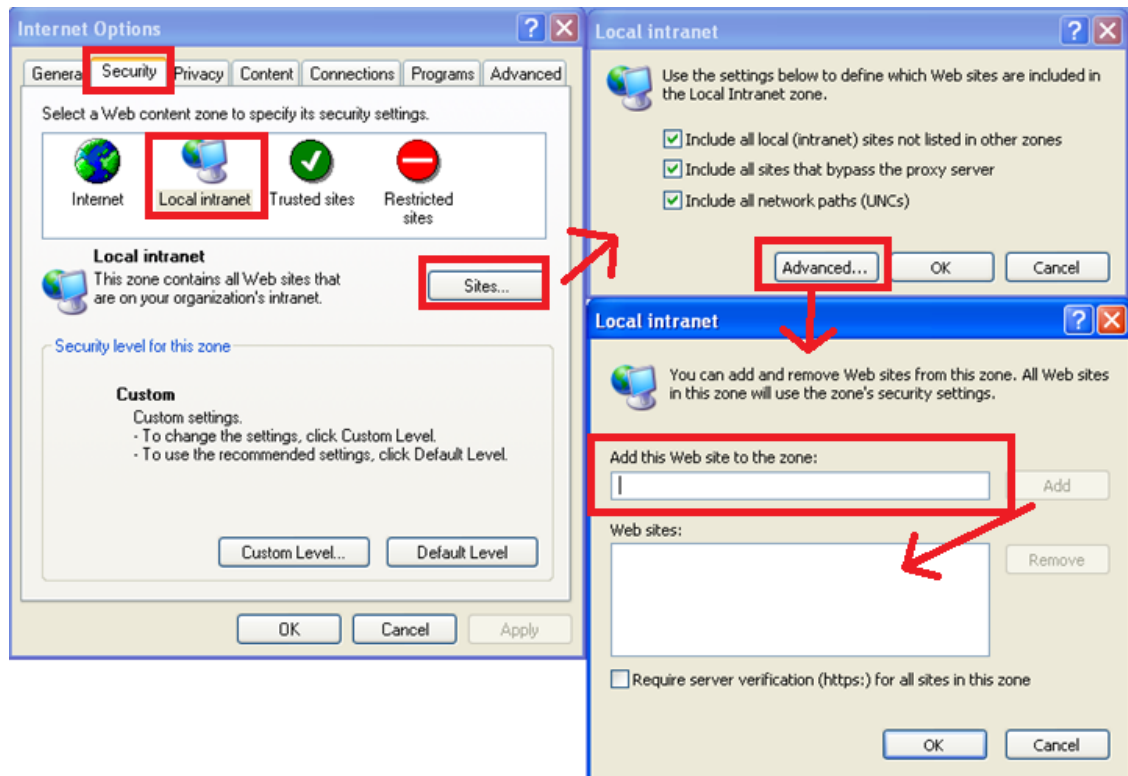

Figure 7-13: Google Chrome Browser Settings – Show advanced settings

3. Locate the 'Network' setting and click the button Change proxy settings under the Connections tab

Figure 7-14: Google Chrome Browser Settings – Change proxy settings

4. (Security tab > Local Intranet zone > Sites... > Advanced... > add the SmartTAP 360° Live FQDN to the local Intranet zone.
5. Close all Google Chrome windows and restart; SSO takes place.

Figure 7-15: Google Chrome Browser Settings – Adding a Web Site to the Zone

Testing Single Sign-On

After logging into the domain computer and configuring the browser to trust the SmartTAP 360° Live server as described in previous sections, you can browse to the SmartTAP 360° Live Web server, preferably via the SmartTAP 360° Live server's FQDN. You may briefly see the Redirecting notification:

Redirecting

You're then brought directly to the Home page that corresponds to your user. The figure below shows the Home page of an Agent by the name user2011.

Figure 7-16: Browsing to the SmartTAP 360° Live Web Server

If an error page is displayed, or if the normal login form for SmartTAP 360° Live is displayed, SSO has malfunctioned – see [Troubleshooting Single Sign-On](#) below.

Troubleshooting Single Sign-On

■ Frequently Asked Questions

When SSO is enabled, how can I log in as the default SmartTAP 360° Live administrative user?

SSO is enabled, so all login attempts will automatically attempt SSO as the domain user logged into the client machine. The SmartTAP 360° Live administrative user (default username = admin) will likely not be a user in Active Directory, so it cannot be used to log into the client machine and log in to SmartTAP 360° Live via SSO. The form login page of SmartTAP 360° Live must be accessed in order to log in as this user.

It is recommended that a domain user be given valid SmartTAP 360° Live permissions to make system changes so that the default SmartTAP 360° Live administrative user can be removed.

How can the form login page be accessed for non-SSO logins?

There are a few ways to do this:

- Browse to the SmartTAP 360° Live server using its IP address instead of the FQDN. SSO will not function this way, so the form page will be displayed. The IP address can be obtained by pinging the hostname from a command prompt.
- Access the SmartTAP 360° Live Web server from a machine that is not on a domain. As a result, no domain credentials will be available, SSO will fail, and the form login page will be displayed.
- For some internet browsers, if the trust relationship is not present (SmartTAP 360° Live server hostname is not configured as an Intranet site), you may be able to access the form login page. See the next question.

Why do I see a popup window in my Web browser asking me for credentials?

When a client accesses the SmartTAP 360° Live Web server, the server requests the client browser to negotiate authentication. If the browser can determine the credentials from the user's login, it will be used. However, if the browser does not trust the Website, or the user is not in the domain, the internet browser will often prompt the user for credentials,

displaying a popup window which prompts for the client's domain credentials, not the SmartTAP 360° Live login credentials.

What can I do when this login prompt pops up ?

There are a few directions this prompt can go:

- Enter a valid username and password for a domain user; SSO is attempted using those credentials. If successful, you will be logged into SmartTAP 360° Live as that user.
- Clicking the Cancel button aborts the login attempt and presents you with a 401 error page.
- Entering an invalid username and password combination will attempt SSO however it will fail and the form login page will be displayed.

■ Troubleshooting

• HTTP Error Codes

HTTP error codes can provide you with more information about why SSO might fail.

Table 7-2: HTTP Error Codes

Error Code	Description
400 – Bad Request	Indicates that part of the HTTP Request is malformed. When using SmartTAP 360° Live for SSO, the likely cause is that the authentication header being sent by the client is too large. This can occur when the client has many authentication details to send. Simpler networks (such as a laboratory test domain) don't require much data for authentication. As of SmartTAP 360° Live Version 2.6, the default maximum header length is 8 KB, but instances in which 32 KB was required for authentication information have been observed. A system property must be added to the SmartTAP 360° Live.xml file for the SmartTAP 360° Live Application Server: org.apache.coyote.http11.Http11Protocol.MAX_HEADER_SIZE must be set to an appropriate value. The following tool, available from Microsoft (tokensz), can be used to determine the maximum Kerberos Token size, the main factor in large authentication size: http://www.microsoft.com/en-us/download/details.aspx?id=1448 .
401 – Unauthorized	Indicates that the HTTP request requires authentication that was not provided by the browser. Occurs when the user cancels out of the browser prompt for domain credentials, or, if the browser does not have a trust relationship with the SmartTAP 360° Live server. Can also indicate that the browser is blocking access to the page because it requires some authentication and the security settings are preventing the page from loading.
403 – Forbidden	The user is forbidden from viewing this page. The user was

Error Code	Description
	authenticated correctly (SSO is functioning) but is trying to view a restricted page. Can occur if the user manually browses to a page they're not allowed to access. Another cause is if SmartTAP 360° Live cannot determine the User Roles/Permissions for this user. Make sure the user performing SSO is part of the domain and that SmartTAP 360° Live can find this loginId through LDAP or in its own database. Make sure LDAP is configured correctly and can communicate with Active Directory.

■ SmartTAP 360° Live Application Server Errors

If SSO authentication fails, the Application Server redirects the user to the form page. To determine the reason why SSO fails, you need to review the Application Server logs. This section shows common error messages from the Application Server logs. These are logged at ERROR level so no changes will be necessary in order to view them.

- **No Errors – Using Firefox browser**
 - ◆ The Firefox browser will by default just display the 401 Unauthorized error page until the configuration is changed to trust the SmartTAP 360° Live server though instances occur in which the Firefox browser does not attempt to authenticate even when the SmartTAP 360° Live server is trusted. For these instances, the user is immediately presented the form login page. When this occurs, no errors are shown in the Application Server since the browser is not attempting authentication.
 - ◆ One instance involved using an older version of Firefox which was then upgraded to the latest version. After upgrading, SSO didn't function. However, this same version was tested to function on a fresh install and other browsers were found to function with SSO without errors. The error was due to the fact that a previous configuration from the older version of Firefox conflicted with the configuration of the later version of Firefox. It has not been determined exactly which configuration caused this error.
- org.ietf.jgss.GSSException is thrown when authenticating with Kerberos server. The failure is unspecified at the GSS-API level (Mechanism level: Encryption type AES256 CTS mode with HMAC SHA1-96 is not supported/enabled)
 - ◆ The Application Server is trying to decrypt a Kerberos ticket/token that is encrypted using encryption type aes256-cts-hmac-sha1-96 to be referred to in this Appendix as AES256. The 256-bit encryption is not supported on the Application Server so it must not be used.
 - ◆ The error was observed when the SSO user was configured in Active Directory with the option This account supports Kerberos AES 256 bit encryption. The highest encryption that can be supported on the SSO user is AES 128.

- ◆ The error was also observed when the Principal Name contained a CNAME instead of the correct hostname. This caused the Principal Name to query encryption types for the host machine (Server 2008), giving its maximum supported encryption level of AES256. This can be confirmed using WireShark to view the Kerberos request from the client PC when attempting to log in; it will be a different Principal Name to that configured for SmartTAP 360° Live.
- Javax.security.auth.login.LoginException: Pre-authentication information was invalid (24)
 - ◆ The likely cause of this error is that the SSO user's password does not match that configured in the SmartTAP 360° Live GUI.
 - ◆ Validate whether the user's password was changed or not - see [Verify the User Credentials](#).
 - ◆ To resolve the error, reset the SSO user's password, re-enter this same password into the SmartTAP 360° Live GUI for the SSO credentials. You may also need to re-generate the keytab using the ktpass command.
- Javax.security.auth.login.LoginException: Checksum failed
 - ◆ Occurs when the Kerberos ticket obtained by the client is out of date. Most frequently, during SSO testing, when a client cached a Kerberos ticket for the first SSO login attempt and an attribute for the SSO user was then changed.
 - ◆ To resolve this, log out on the client PC and then log back in; this immediately flushes the cache of Kerberos tickets and requires the cache to obtain a new ticket when trying to access the SmartTAP 360° Live server.
- Org.ietf.jgss.GSSException is thrown when authenticating with Kerberos server. Defective token detected (Mechanism level: GSSHeader did not find the right tag)
 - ◆ Indicates that the client machine did not send the correct authentication token to SmartTAP 360° Live. The most likely cause is that the client machine did not send any token at all.
 - ◆ Observed with a non-domain client machine accessing SmartTAP 360° Live from a Firefox browser, with trusted site configured.

■ Troubleshooting with More Detailed SmartTAP 360° Live Application Server Logging

If more detailed logging is required to troubleshoot these issues within the Application Server, configure the following loggers. Consult with AudioCodes technical support before making any changes to the SmartTAP 360° Live logging.

The loggers can be configured through the SmartTAP 360° Live Application Server Web interface - browse to <http://localhost:9990>. Note that this requires running the add_user.bat script to configure a user for accessing the Admin Console, or it can be configured in the SmartTAP 360° Live.xml configuration file - which requires a restart of the Application Server service.

```
com.audiocodes.auth--> TRACE
com.audiocodes.ngp.web.security--> TRACE
com.audiocodes.ngp.web.system--> DEBUG
org.apache.catalina.authenticator--> TRACE
```

■ Resetting the Configuration for Firefox Browser

In certain situations, it may be necessary to reset the configuration for the Firefox browser in order to use SSO with SmartTAP 360° Live. To do this, see the Mozilla guide at <https://support.mozilla.org/en-US/kb/reset-preferences-fix-problems>.

This wipes out all saved settings for the browser such as bookmarks, history, tabs, passwords, cookies, etc. <https://support.mozilla.org/en-US/kb/reset-preferences-fix-problems>

The following sections summarize the guide.

■ Refresh Firefox

This section instructs you how to refresh Firefox.

- Click the menu button , click help  and select Troubleshooting Information; the Troubleshooting Information tab opens.
- Click the Refresh Firefox button in the uppermost right corner of the Troubleshooting Information tab.
- When prompted to confirm, click the Refresh Firefox button again; Firefox closes to refresh itself. When finished, a window is displayed listing your imported information. Click Finish; Firefox reopens.
- If previously set, the 'Trusted URIs' configuration will be lost. Follow the steps in the Firefox Browser configuration to assign the SmartTAP 360° Live server as a trusted server.
- Attempt SSO again; if SSO still doesn't work, delete Firefox preference files as shown in the next section.

■ Delete Firefox Preference Files

This section instructs you how to delete Firefox preference files.

➤ To delete Firefox preference files:

- Click the menu button , click help  and select Troubleshooting Information; the Troubleshooting Information tab opens.
- Under the Application Basics section, click Show Folder; a window opens displaying your profile files.
- Click the menu button  and then click Exit .

- d. Locate and delete the file prefs.js (or rename it, for example, to prefs.jsOLD, to keep the old file as a backup. If you find more than one, a prefs.js.moztmp file or a user.js file, delete (or rename) these as well.
- e. Close the profile folder and open Firefox.
- f. If previously set, the 'Trusted URIs' configuration will be lost. Follow the steps in the Firefox Browser configuration to assign the SmartTAP 360° Live server as a trusted server.
- g. Attempt SSO again; if SSO still does not work, uninstall and reinstall Firefox as shown in the next section.

■ Uninstall & Reinstall Firefox

- a. Uninstall Firefox through the Windows Control Panel.
- b. Make sure all Firefox data stored in the following locations is removed:
C:\Users\<user>\AppData\Local\Mozilla\
C:\Users\<user>\AppData\Roaming\Mozilla\
[Optional] Reboot the machine.
- c. Reinstall the latest version of Firefox. It may be a good idea to download the latest version from Mozilla again, to be safe.
- d. After the installation, follow the steps in the Firefox Browser configuration to assign the SmartTAP 360° Live server as a trusted server.
- e. Attempt SSO again.

8 SmartTAP 360° Live Skype for Business Toolbar

The SmartTAP 360° Live Skype for Business Toolbar functions in conjunction with the Skype for Business Conversation Window Extension (CWE) which allows the user to have access to in-call features like 'Save on Demand', 'Call Tagging', etc., without needing to open a browser window to access the SmartTAP 360° Live GUI separately. The toolbar is by default not enabled and must be installed / configured by AudioCodes, a certified AudioCodes Partner or by your local IT expert.

To learn more about Microsoft Skype for Business CWE, refer to:
[http://msdn.microsoft.com/en-us/library/office/jj933101\(v=office.15\).aspx](http://msdn.microsoft.com/en-us/library/office/jj933101(v=office.15).aspx)

Toolbar Features

- Single Sign-On
- Save on Demand, Record on Demand or Full Time Recording
- Pause / Resume Recording
- Call Tagging

See more information in this document to understand how to use the features above with the CWE window.

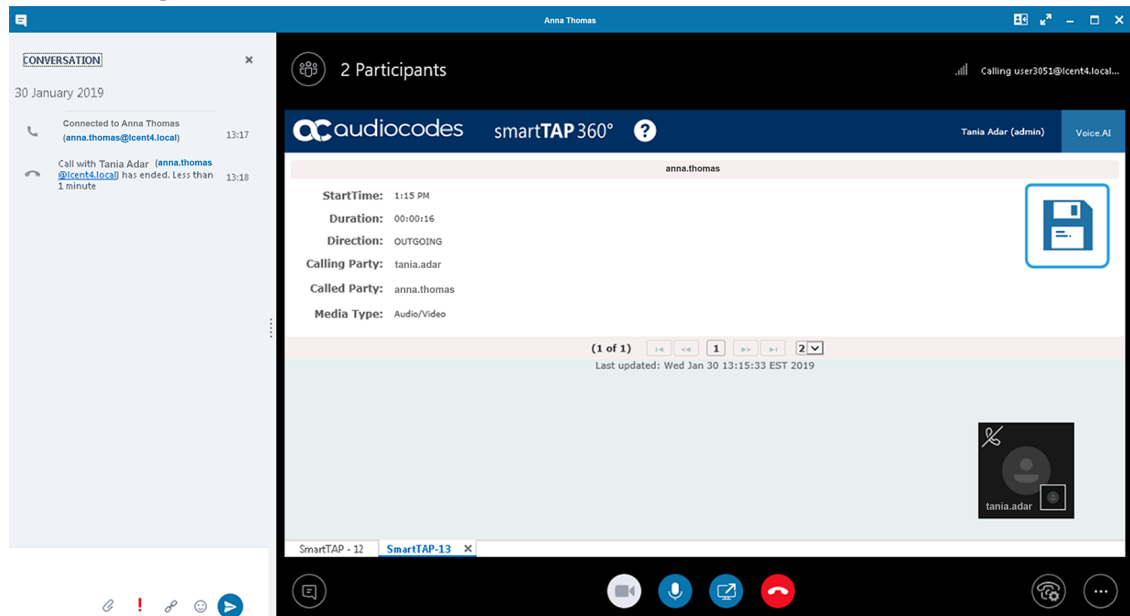

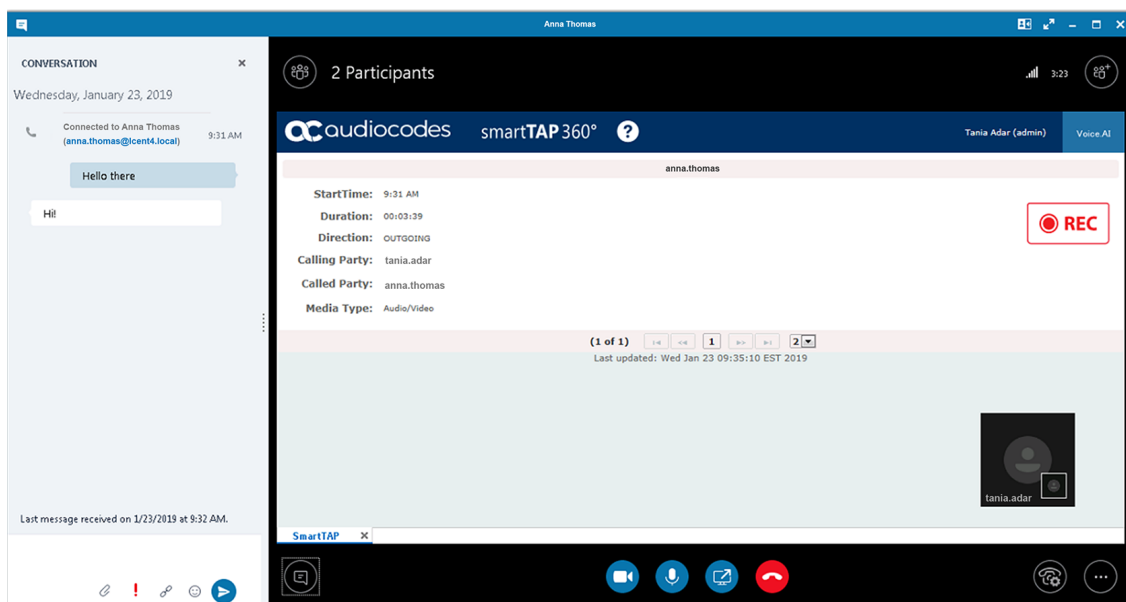

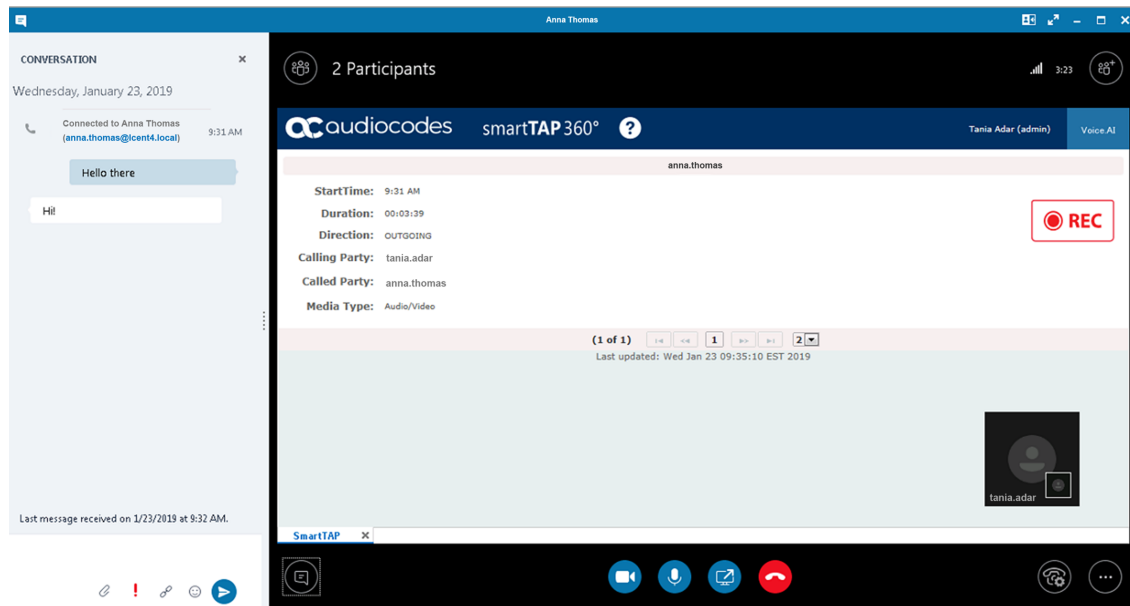

Figure 8-1: SmartTAP 360° Live: Save On Demand (SOD)**Figure 8-2: Record on Demand (ROD)**

Figure 8-3: SmartTAP 360° Live Skype for Business CWE Toolbar (Pause / Resume)

9 Media Exporter

Media Exporter is a separate desktop application useful for compliance officers or for those who need to download bulk calls from SmartTAP 360° Live for a specific user or for all users within a date/time range.

The number of exported recordings is limited to 1500. The download time depends on the system specifications and load. It takes approximately 10-15 minutes to download 100 call recordings with an average duration of 5 minutes on an idle system with 4 cores. It is not recommended to export a higher number of records during system working hours.

The search parameters are similar to the SmartTAP 360° Live UI. Administrators must enter their credentials to access the application. Security credentials assigned by SmartTAP 360° Live determine which users will be visible and whose associated calls will be available for downloading.

Currently both audio and video call types can be exported together. The video component of video calls is not exported in the current version. Alternatively, only the audio of video calls is exported in this version.

➤ To run the Media Exporter:

1. Run the MediaExporter.exe tool from your Windows PC.
2. Enter the access details and credentials:
 - SmartTAP 360° Live URL to be used to access the SmartTAP 360° Live UI
 - Enter the username (same as that used to access the SmartTAP 360° Live UI)
 - Enter the password

Figure 9-1: Credentials

The screenshot shows a window titled "Media Exporter" with the AudioCodes logo in the top left. The window contains three input fields and a button:

- SmartTap Server URL:** A text box containing the value "http://smarttap".
- User:** A text box containing the value "admin".
- Password:** An empty text box.
- Log In:** A button located below the password field.

3. Enter the Search Criteria.

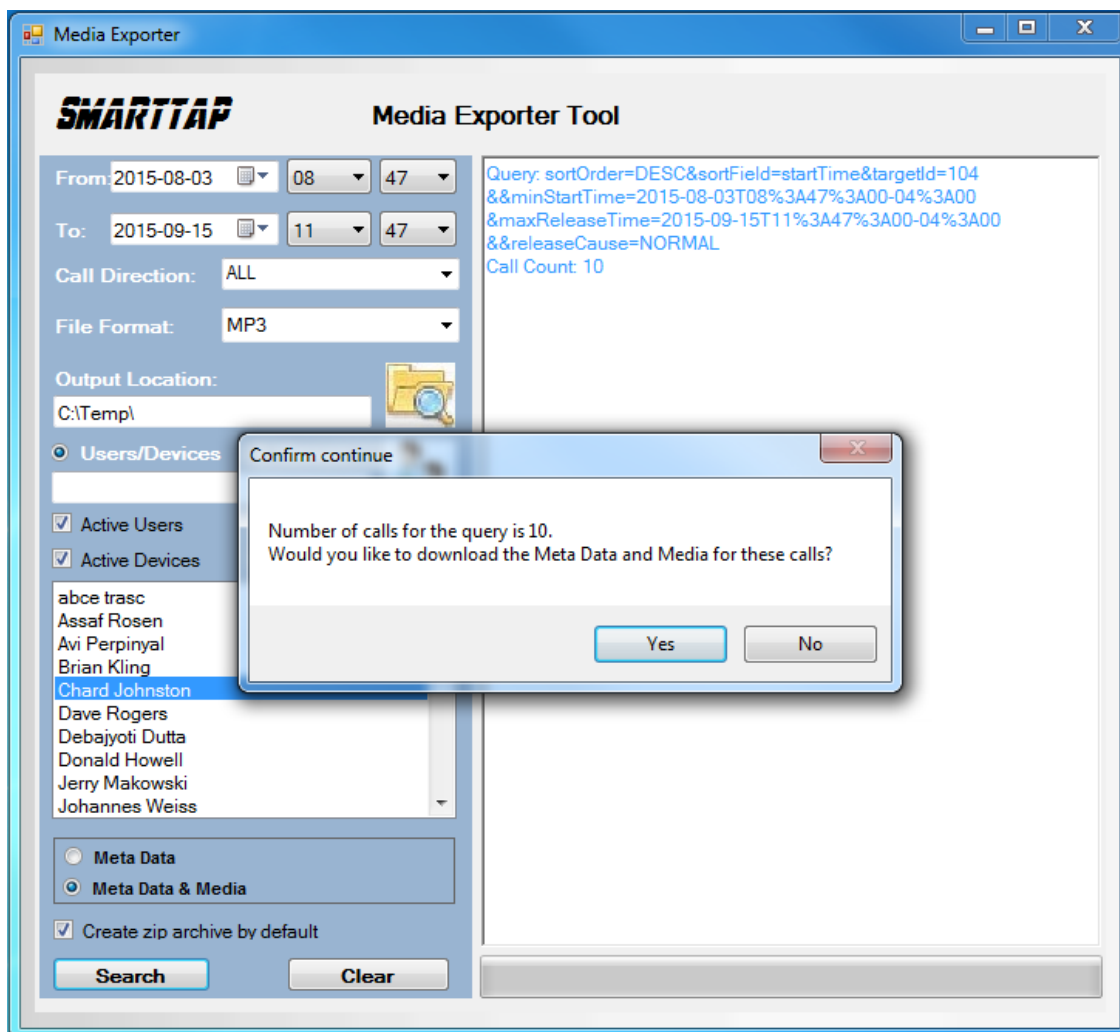

Figure 9-2: Enter the Search Criteria

The screenshot shows the 'Media Exporter Tool' window. The interface includes the following fields and options:

- From:** 2015-09-15, 08:47
- To:** 2015-09-15, 11:47
- Call Direction:** ALL
- File Format:** MP3
- Output Location:** C:\Temp\
- Search Scope:** ☒ Users/Devices, ☐ Groups
- Filters:**
 - ☒ Active Users, ☐ Inactive Users
 - ☒ Active Devices, ☐ Inactive Devices
- User List:**
 - abce trasc
 - Assaf Rosen
 - Avi Perpinyal
 - Brian Kling
 - Chard Johnston** (highlighted)
 - Dave Rogers
 - Debajyoti Dutta
 - Donald Howell
 - Jerry Makowski
 - Johannes Weiss
- Export Options:**
 - ☐ Meta Data
 - ☒ Meta Data & Media
 - ☒ Create zip archive by default
- Buttons:** Search, Clear

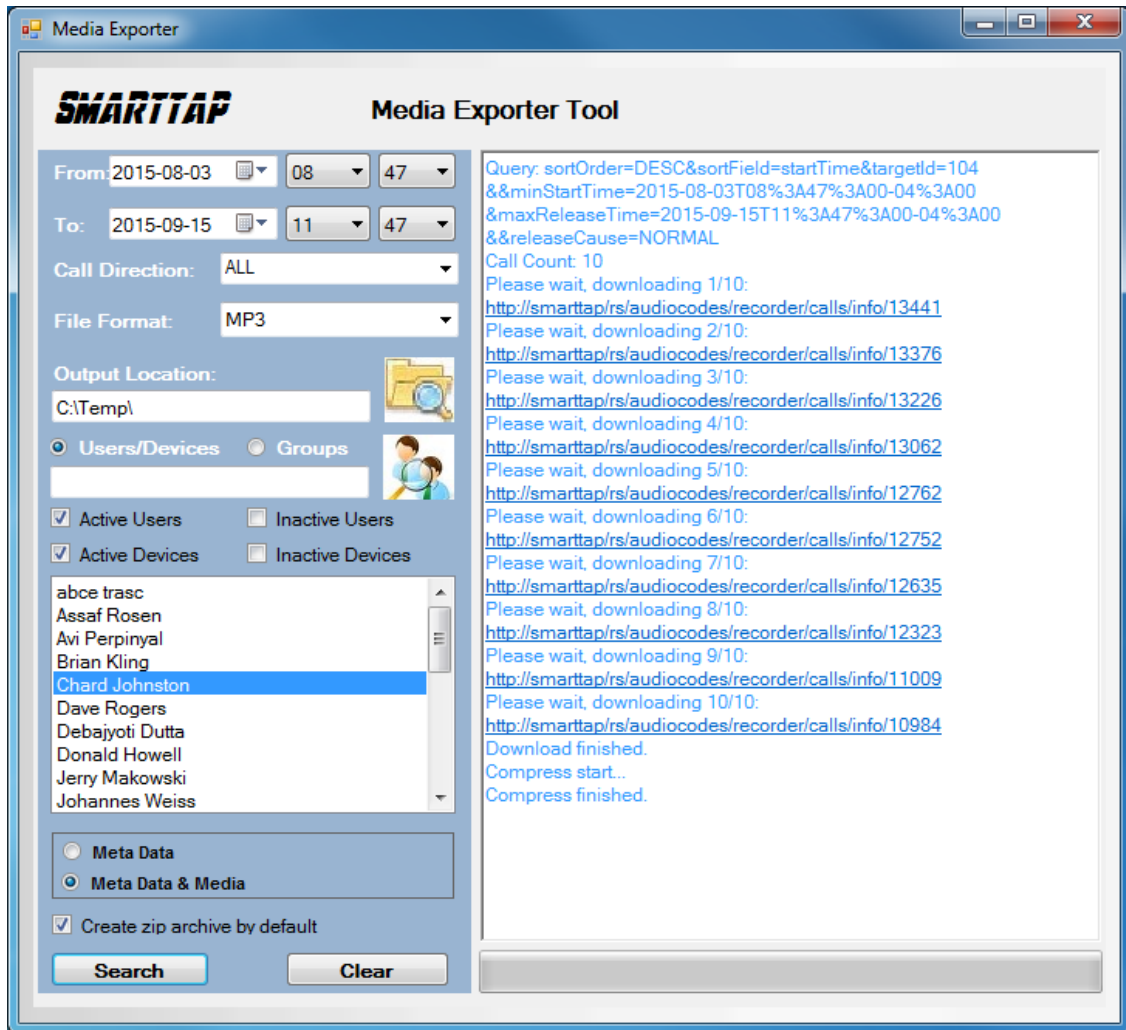

- The following search criteria definitions are identical to those of the SmartTAP 360° Live Web interface:
 - ◆ File Format (MP3, WAV) Either format can be played using standard Media Player
 - ◆ Output location: Where do you want the zip file and contents to be saved?
 - ◆ Meta Data or Meta Data & Media: Download only the Call Records or the Call Records and the Audio Files
 - ◆ Create zip archive by default: The Meta Data and audio files will be zipped for convenient storage and distribution.

Figure 9-3: Search Results

4. Select Yes to start downloading the calls.

Figure 9-4: Downloading

After the download completes, the default browser automatically opens presenting the Call Manifest for the calls from the search results.

Figure 9-5: Call Manifest

The screenshot shows a web browser window displaying the 'Call Manifest' table. The table lists call details for Chard Johnston, including dates, times, durations, directions, and parties involved. The table is filtered to show only outgoing calls.

User/Device	Started Date	Started Time	Answered Date	Answered Time	Released Date	Released Time	Duration	Direction	Calling Party	Called Party	Answering Party	Dialed Digits	Release Cause	Play

In the output location, you'll find the unzipped data and a zip file which contains the Call Manifest and all the associated audio files.

Figure 9-6: Output Location

Folder Name: User Name of User that downloaded calls + Date + Time.

Figure 9-7: Contents of Folder

Calls.html: Call Manifest

Calls.xml: Call Meta Data exported from SmartTAP 360° Live loaded with Calls.html

Calls_excel.xml: Open file in Excel. Once in, Excel can be used to generate statistics and reports.

10 API Integration

The SmartTAP 360° Live API is a RESTful Web Services API that provides complete access to and control over the SmartTAP 360° Live platform. The API provides:

- All administrative functions, including adding users and creating profiles
- Advanced call recording and search capabilities
- Retrieval of recordings & associated Meta Data
- Real-time call monitoring
- Others

Try the following example from your browser. Enter in the address bar:

<http://url/rs/audiocodes/recorder/calls/info>

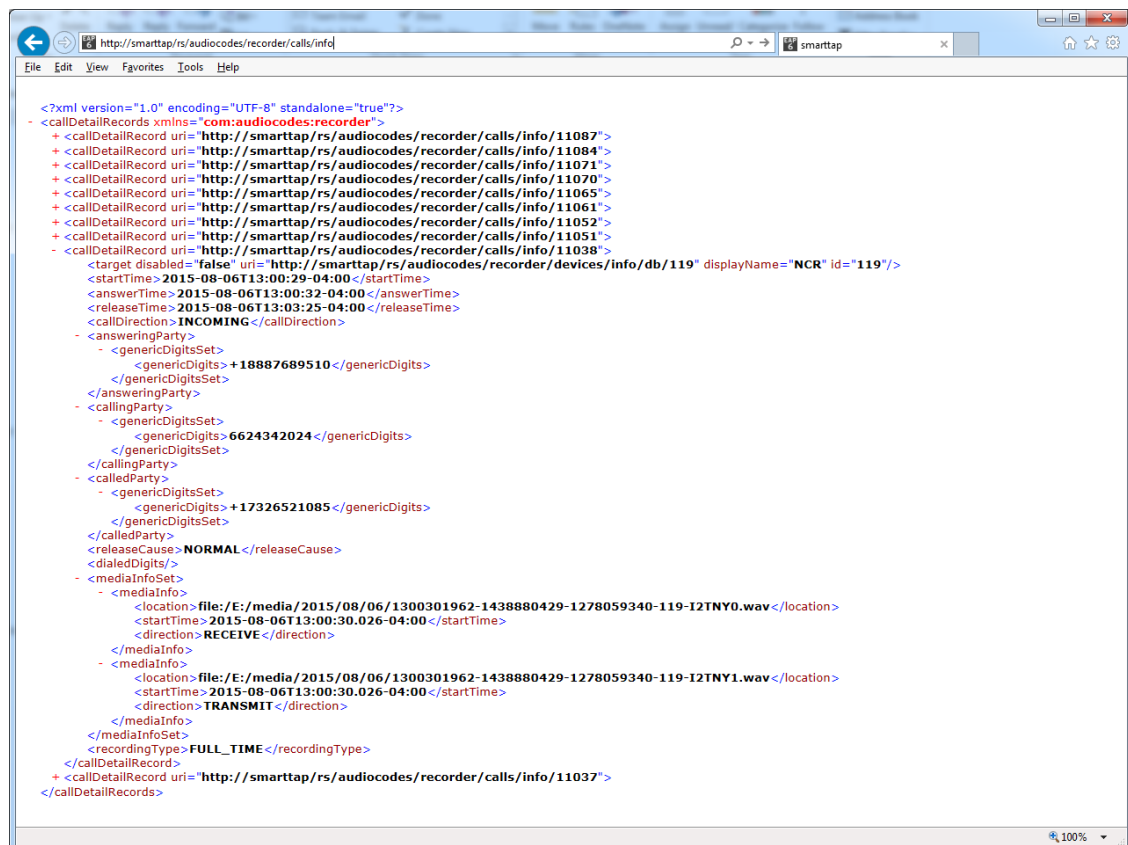

Change 'URL' to the IP address or the name of your SmartTAP 360° Live product.

<http://SmartTAP 360° Live/rs/audiocodes/recorder> - path to SmartTAP 360° Live

/calls - SmartTAP 360° Live Rest API resource

/info – Returns a collection of call detail records based on search criteria parameters

Figure 10-1: API Integration

To learn more about the SmartTAP 360° Live REST API, see the HTML documentation included with the SmartTAP 360° Live software distribution.

11 Recording Health Monitor

The Recording Health Monitor (HM) service is used to monitor the health of the system by automatically monitoring users records and their associated media. It identifies and reports the following behavior:

- Number of recorded calls per enabled for recording user
- Silent or no media in answered call recordings
- Accessibility to associated media files in answered call recordings

The service utilizes the REST API to retrieve the data from an Application Service and to generate daily reports. The following daily report of calls for targeted, recording enabled, users are generated:

- `recording_report_YEAR-Month-Day.txt` – general report of all targeted users and calls in text format.
- `recording_summary_report_YEAR-Month-Day.csv` - general report of all targeted users and calls in CSV format (Excel).
- `recording_err_warn_report_YEAR-Month-Day.csv` – warnings report in CSV format (Excel) that includes a list of possible recording issues such as no recordings for a targeted user, silent or zero media in answered call recordings, in CSV format (Excel).

The reports generation schedule (default 11:00 pm) can be configured using HP configuration file, located in AudioCodes tools folder in Program Files under Config (ex. C:\Program Files\AUDIOCODES\Tools\HealthMonitor\Config). Email notification with generated reports can be sent via email (requires HealthMonitor SMTP configuration).

The Health Monitor is installed automatically on SmartTAP 360° Live server as a part of the SmartTAP 360° Live installation, under the AudioCodes tools folder in Program Files (ex. C:\Program Files\AUDIOCODES\Tools\HealthMonitor). The Health Monitor is installed as a Windows Service under the name “AudioCodes HM”.

For configuring the health monitor, see the following:

- [General Configuration](#) below
- [REST API Configuration](#) on page 234

General Configuration

This section describes the general configuration for Recording Health Monitor utility.

The user interface should be configured once following the installation and further updates should be made directly in the AudioCodes\Tools\HealthMonitor\Config.

Figure 11-1: General Configuration

- **Scheduled report monitoring days:** HM monitors call activity for the selected days. If no days are selected, HM monitors all days. Default: All days.
- **Report Time:** Health Monitor start time. Monitoring will start on scheduled time. Default: 11:00 pm.
- **Report Retention Days:** Sets the number of days to store reports. Old reports are purged from the database accordingly. By default, this parameter is configured to 0. This default can be changed in the configuration file as follows:

```
AudioCodes\Tools\HealthMonitor\Config
<ReportRetentionDays> 10</ReportRetentionDays>
```

- **WebServiceUrl:** Health Monitor Web Service configuration page. Default: <http://localhost:10101>.
- **Email notification:** enables email notification option. HM sends an email with attached daily reports on a scheduled time. SMTP configuration is required if this option is enabled. For more details see [Configuring Email Server Settings](#) on page 67. Default: Disabled.
- **DelayReportInSec:** Provides delay time before starting and generating reports. Default -0 not enabled (seconds)

```
AudioCodes\Tools\HealthMonitor\ConfigDelayReportInSec>0</DelayReportInSec>
```

- **FileAccessRetryIntervalSec:** Enables the Health Monitor to retry to access Blob\SMB location. The value reflects the time to wait between each retry. Default-1 (seconds)

```
AudioCodes\Tools\HealthMonitor\Config<FileAccessRetryIntervalSec>1</FileAccessRetryIntervalSec>
```

- **FileAccessRetryCount:** Enables the setting of the number of retries to access Blob\SMB locations. Default-3

```
AudioCodes\Tools\HealthMonitor\Config<FileAccessRetryCount>3</FileAccessRetryCount>
```

- **ReportLocaton:** Enables the storage of reports in a custom location. Default is [HM LOCATION]\Reports.

```
AudioCodes\Tools\HealthMonitor\Config<ReportLocation>Reports</ReportLocation>
```

REST API Configuration

This section describes the REST API configuration for the Recording Health Monitor.

Figure 11-2: REST API Configuration

The Health Monitor uses a dedicated user for REST communication with Application Server. It is not necessary to modify this configuration (with the exception of the note below).

In case the Application server is configured for HTTPS only, the Address field should be changed to `https://FQDN` of Application Server, where FQDN should be the same as in the certificate that was issued for the Application Server. This is necessary for authentication purposes.

Report Formats

The Health Monitoring utility generates a report including the following fields:

- Display name – display name of targeted user
- Recording profile – assigned call recording type
- Number of answered calls – total number of answered calls
- Warnings – number of warnings
- Errors – number of errors

Figure 11-3: Example 1: recording_report_YEAR-Month-Day.txt

```

12 Announcement Server (Skype for Business)

SmartTAP 360° Live offers Announcement Server (AN) in the Microsoft Skype for Business environment to inform the call parties that their call will be recorded. When the Announcement Server (AN) is deployed, SmartTAP 360° Live redirects inbound, outbound, and internal calls with enabled for recording users (targeted users) to the Announcement Server. The Announcement Server plays the announcement according to the configuration in the Recording Profile (see [Managing Recording Profiles](#) on page 116 and [Announcement Server - Example Configurations](#)). For installing and setting up the Announcement server,

- SmartTAP 360° Live requires two concurrent audio recording licenses to record both legs of the announcement part of the call. Make sure that the number of the system's concurrent recording licenses is equal to or higher than the number of concurrent announcements multiplied by 2.
- **For Microsoft Teams:** For Microsoft Teams recording notifications are provided by Microsoft.

This section includes the following:

- [Simple Announcement](#) below
- [IVR](#) on the next page
- [Example Announcement Server Scenarios](#) on page 242
- [Announcement Server Configuration Parameters](#) on page 244
- [Announcement Server - Example Configurations](#)

Simple Announcement

SmartTAP 360° Live can be configured to play announcements to the calling party and if required called parties on a call with a targeted user. The configuration enables setting of announcements to the calling party and if required called parties on a call with a targeted user.

➤ To configure a simple announcement:

1. Create a WMA audio file. You can use the Windows Sound Recorder.

Figure 12-1: Sound Recorder

Example: "Thank you for calling Company A, your call may be recorded for quality assurance".

2. When done, click Stop Recording and it will prompt for the new file destination.
3. Save the file to the following location:
Program Files\AudioCodes\SmartTAP 360° Live\AN\Config\StateMachineConfig

Ensure that you save the file in WMA format.

Figure 12-2: Announcement Server

IVR

SmartTAP 360° Live supports interactive voice response (IVR) announcements. The IVR menus are configured by default to request recording consent from a call party(s). These menus can be customized:

- Text-to-speech support is available in 26 languages (see [Enabling Text-to-Speech Platform](#) on the next page)
- Enable Consent to record calls (see [Consent to Record Calls](#) on page 240)

For details on configuring IVR files, see Section [Configuring IVR Script Files](#) below. Once configured, the IVR files can be loaded to the user's Recording Profile (see [Managing Recording Profiles](#) on page 116).

Configuring IVR Script Files

The IVR files are located as follows:

- The prompt media files are located under ...\\Program Files\\AudioCodes\\SmartTAP 360° Live\\AN\\Languages. USA English media files are under en-us folder.
- The IVR state machines are located under Program Files\\AudioCodes\\SmartTAP 360° Live\\AN\\Config\\StateMachineConfig

IVR scripts files must be saved in JSON format to the StateMachineConfig file in order to be configured in the Recording Profile (see [Managing Recording Profiles](#) on page 116).

- The IVR sample state machines are located under Program Files\AudioCodes\SmartTAP 360° Live\AN\Config\Repo

Name	Date modified	Type	Size
Config	9/7/2016 3:04 PM	File folder	
Languages	9/7/2016 3:04 PM	File folder	
MusicOnHold	9/7/2016 3:04 PM	File folder	
PowerShell	9/7/2016 3:04 PM	File folder	
Repo	9/7/2016 3:04 PM	File folder	
StateMachineConfig	9/7/2016 3:04 PM	File folder	

The AN state machine can be fine-tuned according to requirements in the state machine file. The following shows example IVR file :

    "ErrorNextId": null,
    "IsFirst": false
  }
}
```

Enabling Text-to-Speech Platform

The actual consent to record announcements can be played from a text-to-speech (TTS) file or from a recorded audio file. This section describes how to setup to use the TTS method.

➤ To enable text-to-speech platform:

1. Download and install Microsoft Speech Platform - Runtime (Version 11) from here:

<https://www.microsoft.com/en-us/download/details.aspx?id=27225>

2. After you have the platform installed, now you need to download and install TTS languages which you want to support in yours AN application. Microsoft Speech Platform - Runtime Languages (Version 11)

<https://www.microsoft.com/en-us/download/details.aspx?id=27224>

The link above is for download the whole TTS (text to speech) and SR (speech recognition) files.

- After you download it, you need to install each relevant file you want according to language. For example, if you want to support text to speech for Russian then install the file MSSpeech_TTS_ru-RU_Elena.msi.

For English, install MSSpeech_TTS_en-US_Helen.msi or MSSpeech_TTS_en-US_ZiraPro.msi.

- It is not recommended to install Speech Recognition (SR) files because currently AN doesn't support speech recognition. This feature may be supported in the future. If you install SR files, this files will not be used and AN behavior is not affected.
- Install platform and language from the same Version 11. A combination of Versions 10 and 11 is invalid.

- To enable TTS copy over and if required modify state machine(s) from the folder ending with tts in ...\\Program Files\\AudioCodes\\SmartTAP 360° Live\\AN\\Repo to the Program Files\\AudioCodes\\SmartTAP 360° Live\\AN\\StateMachineConfig folder.

Consent to Record Calls

SmartTAP 360° Live supports interactive voice response (IVR) announcements requesting consent from the call party to record the conversation of the call. If the call party does not consent, the conversation is not recorded. Below is an example of a call consent prompt:

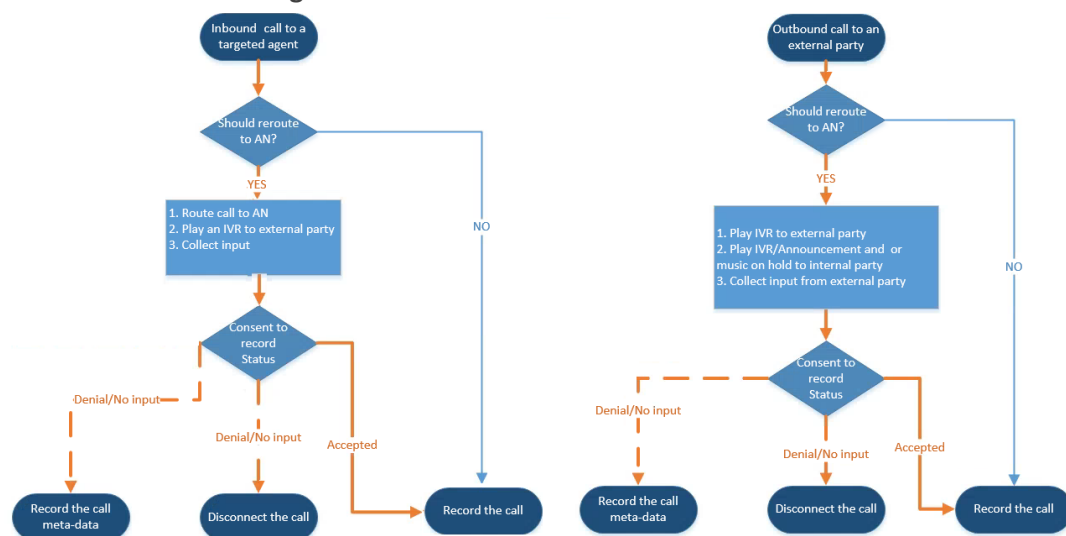

“This call may be recorded for quality assurance purposes. Press one to accept or press zero to continue without recording.”

The Demo IVR files provided by SmartTAP 360° Live, by default, disable call consent.

The following figure illustrates the Call Consent process for Inbound and Outbound calls:

Figure 12-4: IVR Announcements

Consent result and action are displayed as part of call record meta-data as shown below:

Announcement Server Configuration Parameters

The table below describes the configuration parameters that can be configured in the System.config file.

Table 12-1: System.config File

Parameter	Description
appEndpointDiscoveryName	Defines the value of Skype for Business trusted application endpoint that will be used by this application. The default value is "AnnouncementsApp".
userAgent	Defines the Application User agent. The default value is " AnnouncementsApp".
inviteDest	If the value is not empty, the application calls to

Parameter	Description
	this destination and ignores the To header of incoming INVITE. The default value is "".
bufferSize	Defines buffer size of transferring data between calls. The default value is "60".
supervisedTransferHeaderName	Defines the header name of supervised transfer INVITE that should be returned by the FE to the application. The default value is "X-Announcements-Supervised-Transfer".
supervisedTransferHeaderValue	Defines the header value of supervised transfer invite that should be returned by FE to the application. The default value is "\$1MsplApp".
outCallPassThroughHeaderNames	Defines the headers to pass from in call to out call. The default value is "Ms-Exchange-Command;HISTORY-INFO" e.g., "headerNameA;headerNameB;headerName C".
diagnosticsHeaderName	Defines the diagnostics header name. The default value is X-Announcements-DIAGNOSTICS.
maxEndpointDiscoveryMiliSeconds	Defines the maximum time in milliseconds to wait for first application endpoint discovery. The application exits if no endpoints are discovered within this time. The default value is 30000.
maxPlayPromptsMiliSeconds	Defines the maximum time in milliseconds to play prompts. The default value is 1800000.
nlogNetworkLayout	Defines the Nlog network layout. The default value is: <ul style="list-style-type: none"> ■ \${longdate} \${level} \${message} ■ \${exception:format=Message}\${newline}
referredByAddedParamName	This parameter name is added to the SIP

Parameter	Description
	'Referred-By' header. The default value is "X-Announcements".
referredByAddedParamValue	This parameter value is added to the SIP 'Referred-By' header. The default value is "AnnouncementsApp".
transferType	Defines the Transfer Type. Valid Values: <ul style="list-style-type: none"> ■ Attended - Perform attended transfers. ■ Unattended - Performs unattended transfers.
webServiceBaseUrl	Describes the listening URL of the Announcement server's Web service Rest API.
enableMoh	Sets true to enable Music on Hold. Possible values: <ul style="list-style-type: none"> ■ True (default) ■ False
mohFileName	Defines the Music on Hold file name. The file must be located in the project directory tree inside the MusicOnHold directory. The default value is "music-default.wma".
ivrResultParamName	Defines the parameter name that will be added in the referred-By header. The default value is "X-AnnIvrResult".
ivrCleanerSec	Clean stale calls IVR container every period of time in seconds. The default value is 1800.
impersonateInCall	If true, in call will be impersonated, i.e. for the P-Asserted header of 200 OK, the value in the header will not be Announcement user/ID?? and instead the original destination user. Possible values: <ul style="list-style-type: none"> ■ True ■ False (default)
uaReceiveReferRegex	If UserAgent matches the regular expression then

Parameter	Description
	<p>the SIP REFER is sent to this device. Solves a problem with the Polycom 500V VX phone where AN should send the SIP REFER to the phone when rerouting the call to the original destination.</p> <p>Default value:</p> <p>"PolycomV VX-V VX_500"</p>
asList	<p>Application server comma-separated list. AN sends alarms to the AS in the list.</p> <p>For example</p> <p>http://10.21.8.120:80,https://10.21.80.170:443</p>
restClientTimeoutMilliseconds	<p>Alarms timeout in milliseconds.</p> <p>Default Value: 5000</p>
normalizeNumbers	<p>The parameter should be set to true when normalization of called numbers in the Announcement server is required. AN will normalize the called number before rerouting the call to the original destination.</p> <p>Possible values:</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> True <input type="checkbox"/> False (default)
managedDeviceHeartbeatIntervalMs	<p>Interval in milliseconds between each heartbeat request to AS. Valid range [1000 - max int]</p> <p>Default Value: 30000</p>
disableAlarms	<p>Disables the alarms mechanism.</p> <p>Possible values:</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> True (disable) <input type="checkbox"/> False (default)
uaDontReceiveReferRegex	<p>A regular expression (case insensitive). If the value of the UserAgent header matches the expression then the SIP REFER is not sent to that device when rerouting the call to the original destination. This solves the problem for Skype for Business clients when answering '488 not acceptable' on reception of SIP INVITE with replaces from the mobile clients.</p>

Parameter	Description
	Default Value: "ucwa"
noAttendedTransferSupportRegex	A regular expression (case insensitive). When one of the devices in the call to AN doesn't support the Attended Transfer, AN will execute the UnAttended transfer. Mobile clients (S4B) and voice mail don't support Attended Transfers. Default Value: "ucwa"
redirectIfReferNotSupported	When the caller doesn't support REFER, AN may redirect the caller without playing AN (true) or disconnect the call (false). For BothParties mode, redirect the caller if both sides don't support the REFER (true), or disconnect the calls (false). Possible values: <ul style="list-style-type: none"> ■ True (default) – AN redirects the caller ■ False – AN disconnects the call
voicemailRegex	A regular expression (case insensitive). The parameters are used to identify voice mail as a participant of the call routed through the AN according to 'user-agent' and 'server' headers. Default Value: "Exchange"
dontPlayAnnRegex	A regular expression (case insensitive). The parameters are used to identify conference as a participant of the call routed through the AN according to 'user-agent' and 'server' headers. Default Value: "AV-MCU"
isPlayAnnIfAnsweredByVoicemail	The announcement is not played to the caller when the call routed through AN is answered by the voice mail. Possible values: <ul style="list-style-type: none"> ■ True ■ False (default)

For AN Server installation instructions, refer to the *SmartTAP 360° Live Installation Guide*.

Announcement Server Advanced Call Scenarios

- **Advanced Call Scenarios:** Targeted for recording users may participate in advanced call scenarios such as call transfer, call forwarding and conferencing. This section describes whether the configured announcement function is triggered in these advanced call scenarios. The triggering of the announcement in the advanced scenarios doesn't depend on the ANN configuration except for the parameters that are mentioned in this section and therefore the configuration is not defined below.
- **Call Transfers:** The following table defines call transfer scenarios and the announcements generation. For all of the scenarios, A calls B, B answers the call, B puts A on hold, B calls to C (this doesn't take place in blind transfer scenario) and B transfers A to C.

Table 12-2: Call Transfer Scenarios

Call Scenario	Targeted Users	Flow and expected results from AN (the second line is not applicable in case of blind transfer)
Supervised/blind transfer	A	<ol style="list-style-type: none"> 1. A calls B, B answers: announcement is played. 2. B places A on hold and calls C, C answers: no announcement is played. 3. A connected to C: no announcement (set AllowMultipleAnnSameUser to true to play).
Supervised/blind transfer	B	<ol style="list-style-type: none"> 1. A calls B, B answers: announcement is played 2. B places A on hold and calls C, C answers: announcement is played 3. A connected to C: no announcement (set AllowMultipleAnnSameUser to true to play)
Supervised/blind transfer	C	<ol style="list-style-type: none"> 1. A calls B, B answers: no announcement is played. 2. B places A on hold and calls C, C answers: announcement is played. 3. A is connected to C: announcement is played.
Supervised/blind transfer	A + B	<ol style="list-style-type: none"> 1. A calls B, B answers: announcement played 2. B places A on hold and calls C, C answers: announcement played 3. A is connected to C: no announcement is played (set AllowMultipleAnnSameUser to true to play)
Supervised/blind transfer	A + C	<ol style="list-style-type: none"> 1. A calls B, B answers: announcement is played 2. B places A on hold and calls C, C answers:

Call Scenario	Targeted Users	Flow and expected results from AN (the second line is not applicable in case of blind transfer)
		announcement is played 3. A connected to C: no announcement (set AllowMultipleAnnSameUser to true to play)
Supervised/blind transfer	B + C	1. A calls B, B answers: announcement is played 2. B places A on hold and calls C, C answers: announcement is played 3. A connected to C: no announcement is played (set AllowMultipleAnnSameUser to true to play)
supervised transfer	A + B + C	1. A calls B, B answers: announcement is played 2. B places A on hold and calls C, C answers: announcement is played 3. A and C are in a conversation: no announcement (set AllowMultipleAnnSameUser to true to play)

■ Call Forward and Simultaneously Ring

The following table defines playing announcements when a call to an internal user is answered by another user/number/group on behalf of the originally called user.

Table 12-3: Call Forwarding and Simultaneous Ringing

Call Scenario	Targeted Users	Flow and expected results from ANN
forward/team call	A	A calls B, C answers: announcement is played
forward/team call	B	A calls B, C answers: announcement is played
forward/team call	C	A calls B, C answers: announcement is played
forward/team call	A + B	A calls B, C answers: announcement is played
forward/team call	A + C	A calls B, C answers: announcement is played
forward/team call	B + C	A calls B, C answers: announcement is played
forward/team call	A + B + C	A calls B, C answers: announcement is played

- Conferences: Playing announcements on the calls of targeted users with a conference bridge are not currently supported. with SmartTAP 360° Live team the feature status if you need it.

- Video calls: Video calls routed to the ANN are handled as audio-only calls, the video part of the call is stripped. Once the call is transferred to the original destination the video of the call can be re-initiated.
- Mobile Clients and Voice Mail: Announcements are played for calls with mobile clients as defined in previous sections with an exception to the following scenarios:
- The AN is configured to play an announcement to the calling party only mode (AnnouncementRecipients=CallingParty). The mobile client calls to another party where the mobile client, another party or both are targeted users. In this scenario, the announcement is not played.
- The AN is configured to play an announcement to both parties mode (AnnouncementRecipients=BothParty). The mobile client calls to another party where the mobile client, another party or both are targeted users. The call is answered by voice mail. In this scenario, the announcement is not played.
- The AN is configured to play an announcement to both parties mode (AnnouncementRecipients=BothParty). The mobile client calls to another Skype For Business party (not including voice mail), the announcement is played and when completed, the call is disconnected. A new call is automatically created by the other party to the mobile client that needs to answer to connect the call.

13 Microsoft Azure Active Directory

This section describes how to setup Microsoft Azure Active Directory users and authentication:

- [Azure Active Directory User Mapping](#) below
- [Azure Active Directory User Authentication](#) on page 266

Microsoft Azure Active Directory is only supported for Microsoft Teams recordings. Support in other integration platforms is not available in this release.

Azure Active Directory User Mapping

SmartTAP 360° Live Version 5.1 and later allows mapping of an Organizations' (Tenant) users from Microsoft Azure Active Directory (AAD). SmartTAP 360° Live uses the Client Credential Flow to authenticate itself and access hosted resources such as Users and Groups from Azure Active Directory.

Refer to <https://docs.microsoft.com/en-us/azure/active-directory/develop/v2-oauth2-client-creds-grant-flow>.

The user mapping process involves the following steps:

- **Step 1:** Register an daemon client application in Azure Active Directory on behalf of SmartTAP 360° Live (see [Step 1 Application Registration in Microsoft Azure](#) below).
- **Step 2:** Configure API permission for this app in AAD (see [Step 2 Configure API Permissions](#) on page 255)
- **Step 3:** Configure Certificates & Secrets for this app in AAD (see [Step 3 Configure Certificates & Secrets](#) on page 274)
- **Step 4:** Configure this client application in SmartTAP 360° Live (see [Step 4 Configure Azure Active Directory Client in SmartTAP 360° Live](#) on page 260)
- **Step 5:** Add new User Mappings in SmartTAP 360° Live (see [Step 5 Add Azure Active Directory Mapping in SmartTAP 360° Live](#) on page 261)

Step 1 Application Registration in Microsoft Azure

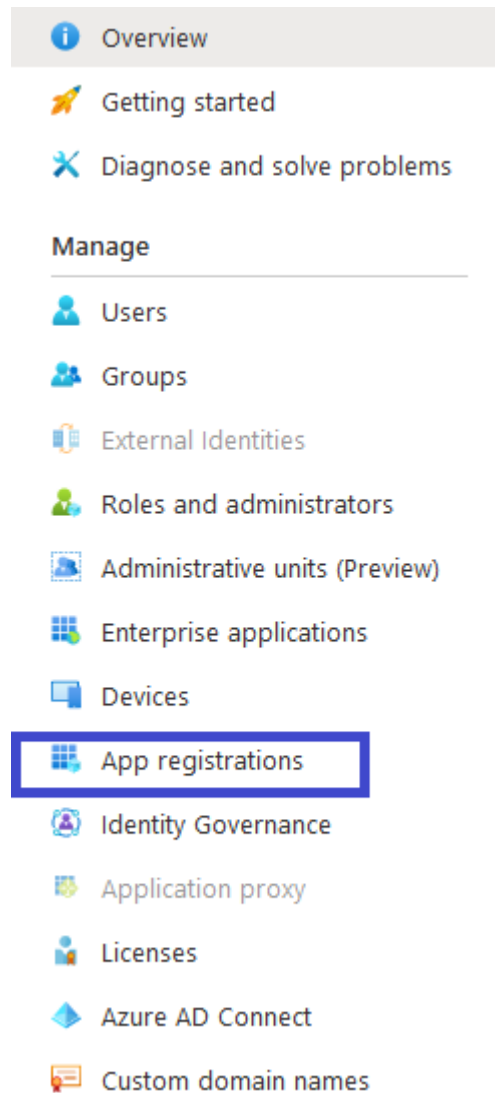

This step describes how to register an Application in Microsoft Azure.

➤ Do the following:

1. Login to the Microsoft Azure portal (<https://portal.azure.com/>).

Figure 13-1: Azure Services

2. Click **Azure Active Directory**.

Figure 13-2: Application Registration

3. In the Navigation pane, select **Manage > App Registration**.

Figure 13-3: New Registration

4. Click **+ New Registration**. The Register an application page is displayed.

Figure 13-4: Sample Screens

Register an application

* Name

The user-facing display name for this application (this can be changed later).

AADAppClient 

Supported account types

Who can use this application or access this API?

- ☒ Accounts in this organizational directory only (AudioCodes Ltd. only - Single tenant)
- ☐ Accounts in any organizational directory (Any Azure AD directory - Multitenant)
- ☐ Accounts in any organizational directory (Any Azure AD directory - Multitenant) and personal Microsoft accounts (e.g. Skype, Xbox)

[Help me choose...](#)

Redirect URI (optional)

We'll return the authentication response to this URI after successfully authenticating the user. Providing this now is optional and it can be changed later, but a value is required for most authentication scenarios.

Web  e.g. <https://myapp.com/auth>

By proceeding, you agree to the [Microsoft Platform Policies](#) 

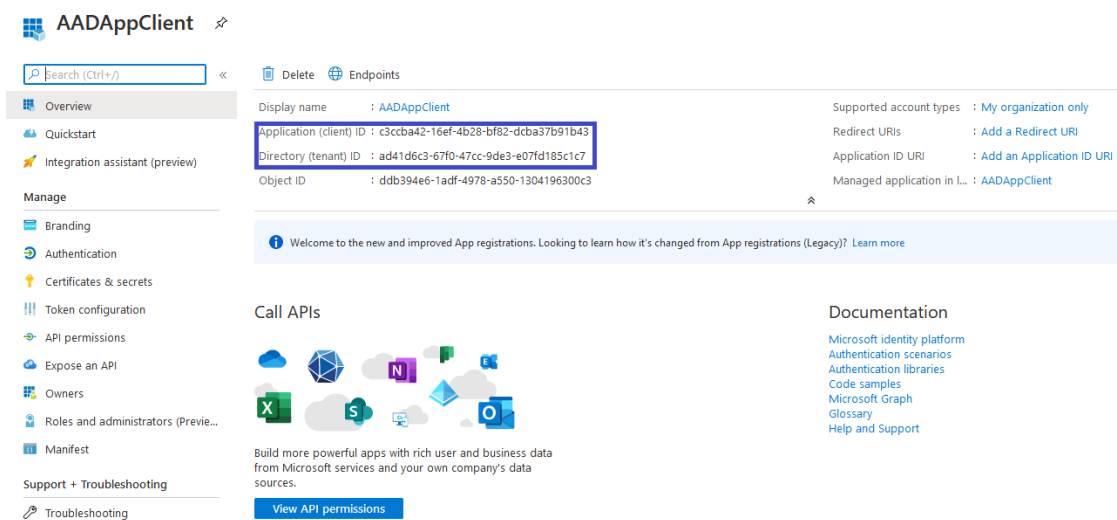

Register

5. Enter the following details:

- Name: enter a name for the client application
- Supported account types: select the radio button for "Accounts in this organizational directory only (AudioCodes Ltd. only - Single tenant)"
- Redirect URI (optional): no action required.

6. Click **Register** to confirm registration.

Upon successful registration, the following details are displayed.

Figure 13-5: AADAppClient

7. Copy the value of Application (client) ID and Directory (tenant) ID for Client Configuration in SmartTAP 360° Live ([Step 4 Configure Azure Active Directory Client in SmartTAP 360° Live](#) on page 260).

Step 2 Configure API Permissions

This step describes the configuration of API permissions.

➤ Do the following:

1. Open the API Permissions screen (**Manage > API permissions**).

Figure 13-6: API Permissions

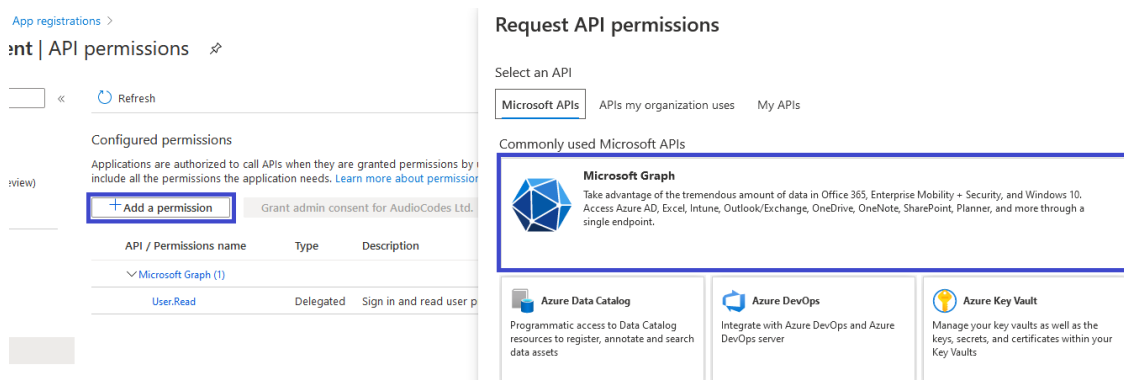

Figure 13-7: Add a Permission

2. On right side panel, click **+ Add a permission** button and select "Microsoft Graph" link.
3. In the Request API permissions section, click the **Application permissions** link.

Figure 13-8: Request API Permissions

Request API permissions

[← All APIs](#)

Microsoft Graph

<https://graph.microsoft.com/> [Docs](#) [↗](#)

What type of permissions does your application require?

Delegated permissions

Your application needs to access the API as the signed-in user.

Application permissions

Your application runs as a background service or daemon without a signed-in user.

Figure 13-9: API Permissions

New support request

Credentials enable confidential applications to identify themselves to the authentication service when receiving tokens at a web addressable location (using an HTTPS scheme). For a higher level of assurance, we recommend using a certificate (instead of a client secret) as a credential.

Certificates
Certificates can be used as secrets to prove the application's identity when requesting a token. Also can be referred to as public keys.

Upload certificate

Thumbprint	Start date	Expires
No certificates have been added for this application.		

Client secrets
A secret string that the application uses to prove its identity when requesting a token. Also can be referred to as application password.

New client secret

Description	Expires	Value
No client secrets have been created for this application.		

- Click **+ New client secret**.

Figure 13-13: Add a Client Secret

Add a client secret

Description

AAD App Client Secret

Expires

☒ In 1 year
☐ In 2 years
☐ Never

Add Cancel

- Enter a "Description", select "Expires" time and then click **Add**.

It's highly recommended to set to 'Never'.

A client secret is generated and displayed as below.

Figure 13-14: New Client Secret

Client secrets

A secret string that the application uses to prove its identity when requesting a token. Also can be referred to as application password.

New client secret

Description	Expires	Value
AAD App Client Secret	7/2/2021	s07y53pN-V~jmW9Vyn260eNO.0_L7tlc_6

- Copy the Value of the client secret for further configuration in SmartTAP 360° Live (see [Step 4 Configure Azure Active Directory Client in SmartTAP 360° Live](#) on the next page).

Step 4 Configure Azure Active Directory Client in SmartTAP 360° Live

To configure the client application in SmartTAP 360° Live, ensure that you all the required details from AAD Configuration including:

- Application (Client) ID
- Directory (Tenant) ID
- Client Secret

➤ Do the following:

1. Login to the SmartTAP 360° Live Web with Administrator role.
2. Open the Add AAD Configuration screen (**System > AAD > Add AAD Configuration**).

Figure 13-15: AAD Tab

Figure 13-16: Add Active Directory Configuration

• Active Directory Configuration successfully saved.

Modify Active Directory Configuration

Name	ST AAD Config
Directory (Tenant) ID	ad41d6c3-67f0-47cc-9de3-e07fd185c
Application (Client) ID	c3ccba42-16ef-4b28-bf82-dcb37b91
Client Secret	

[SUBMIT](#)

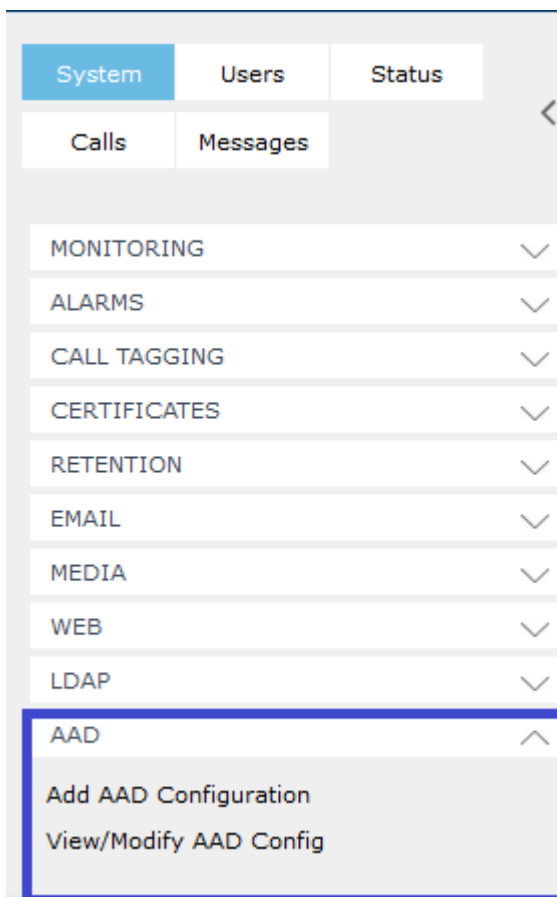

3. Enter the name of the Active Directory configuration.
4. Enter the Directory (Tenant) ID and the Application (Client) ID.
5. Click . A success message is displayed at the top of the screen "Active Directory Configuration successfully saved."

Step 5 Add Azure Active Directory Mapping in SmartTAP 360° Live

SmartTAP 360° Live allows mapping of AAD user from one or more member groups. Each group and its subgroups are checked recursively to retrieve AAD users. For each group you can assign mapping profiles that map regular Active Directory user attributes as well as SmartTAP 360° Live custom user attributes. In this step, you must assign the custom user attribute that was defined in [Adding a Microsoft Teams AAD User Attribute](#) on page 133 for mapping the Teams users object ID. This attribute is assigned to the user mapping profile that is then attached to an AAD group. All users that are attached to this group inherit the attributes that are defined in the mapping profile.

➤ Do the following:

1. Map the user attribute Object ID for the Microsoft Teams user (see [Adding a Microsoft Teams AAD User Attribute](#) on page 133).
2. In the SmartTAP 360° Live Web, open the View/Modify AAD Config page (**System tab** > **AAD folder** > **View/Modify AAD Config**).

Figure 13-17: Add Active Directory Configuration**Figure 13-18: Active Directory Providers**

Azure Active Directory User Authentication

For SmartTAP 360° Live version 5.1 and later users are mapped from Organizations' (Tenant) Azure Active Directory (AAD) and authenticate (login) with SmartTAP 360° Live Web using their Microsoft login credentials. SmartTAP 360° Live uses the OpenID Connect Authorization Code Flow) to authenticate users with Microsoft Identity Platform.

Refer to https://openid.net/specs/openid-connect-core-1_0.html#CodeFlowSteps

Azure Active Directory user authentication involves the following steps:

- **Step 1:** Register an web application (client) in Azure Active Directory on behalf of SmartTAP 360° Live (see [Step 1 Register App in Azure Active Directory](#) below).
- **Step 2:** Check the API permission for this app in AAD (see [Step 2 Check API Permissions](#) on page 270)
- **Step 3:** Configure Certificates & Secrets for this application in AAD (see [Step 3 Configure Certificates & Secrets](#) on page 274)
- **Step 4:** Configure this client in SmartTAP 360° Live Web as OpenID Connect (OIDC) authentication client, also known as Relying Party (see [Step 4 Configure OpenID Connect OIDC Client](#) on page 275).
- **Step 5:** Assign Security Profile to Azure Active Directory user in SmartTAP 360° Live (see [Step 5 Assign Security Profile to Azure Active Directory user in SmartTAP 360° Live](#) on page 278)

Step 1 Register App in Azure Active Directory

This step describes how to register the App in Azure Active Directory.

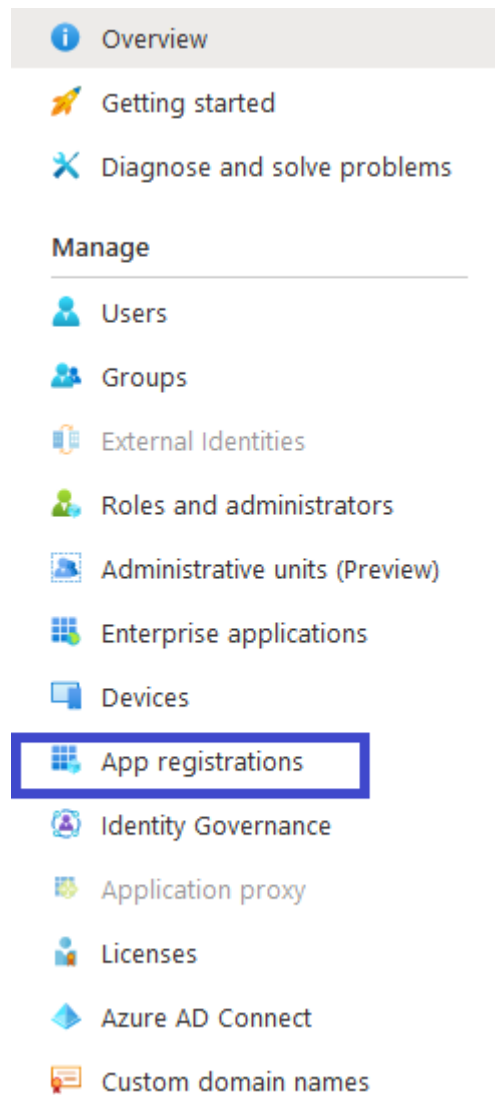

➤ To register app in ADD:

1. Login to Azure portal (<https://portal.azure.com/>)
2. Access Azure Active Directory Service.

Figure 13-25: Azure Services

3. In the Navigation pane, click "App Registration" link.

Figure 13-26: App Registrations

4. On Right side panel client "New Registration".

Figure 13-27: New Registrations

Figure 13-28: Register an Application

Register an application

* Name

The user-facing display name for this application (this can be changed later).

OIDCAuthClient ✓

Supported account types

Who can use this application or access this API?

- ☒ Accounts in this organizational directory only (AudioCodes Ltd. only - Single tenant)
- ☐ Accounts in any organizational directory (Any Azure AD directory - Multitenant)
- ☐ Accounts in any organizational directory (Any Azure AD directory - Multitenant) and personal Microsoft accounts (e.g. Skype, Xbox)

[Help me choose...](#)

Redirect URI (optional)

We'll return the authentication response to this URI after successfully authenticating the user. Providing this now is optional and it can be changed later, but a value is required for most authentication scenarios.

Web

http://localhost/smarttap/status/target_status.jsf ✓

By proceeding, you agree to the [Microsoft Platform Policies](#)

Register

5. Enter the following details:

- Name: Enter a name for the client application
- Supported account types: select the radio button for "Accounts in this organizational directory only (AudioCodes Ltd. only - Single tenant)"
- Redirect URI (optional):
 - ◆ If only HTTP is configured in SmartTAP 360° Live enter http://<SmartTAP FQDN>/SmartTAP/status/target_status.jsf
 - ◆ If HTTPS is configured in SmartTAP 360° Live enter https://<SmartTAP FQDN>/SmartTAP 360° Live/status/target_status.jsf

6. Click **Register** to confirm registration.

On successful registration the following details will be displayed.

Figure 13-29: OIDCAuthClient

The screenshot shows the Azure Active Directory portal interface for an application named 'OIDCAuthClient'. The left sidebar contains navigation options: Overview, Quickstart, Integration assistant (preview), Manage (with sub-options: Branding, Authentication, Certificates & secrets, Token configuration, API permissions, Expose an API, Owners, Roles and administrators (Preview), Manifest), and Support + Troubleshooting (with sub-option: Troubleshooting). The main content area displays the application details for 'OIDCAuthClient'. A box highlights the following information:

- Display name : OIDCAuthClient
- Application (client) ID : dc8f153a-98b8-44ea-8cfd-17e2de1b382a
- Directory (tenant) ID : ad41d6c3-67f0-47cc-9de3-e07fd185c1c7
- Object ID : 9939ba2d-fe96-4c8b-8637-bedad4b77512

Other details shown include:

- Supported account types : My organization only
- Redirect URIs : 1 web, 0 spa, 0 public client
- Application ID URI : Add an Application ID URI
- Managed application in L. : OIDCAuthClient

Below the details, there is a 'Call APIs' section with a 'View API permissions' button and a 'Documentation' section with links to Microsoft identity platform, Authentication scenarios, Authentication libraries, Code samples, Microsoft Graph, Glossary, and Help and Support.

7. Copy the value of Application (client) ID and Directory (tenant) ID for later configuration in the SmartTAP 360° Live Web (see [Step 4 Configure OpenID Connect OIDC Client](#) on page 275).

Step 2 Check API Permissions

This step describes how to check API permissions.

➤ To check API permissions:

1. Open the API Permissions screen (**Manage > API permissions**).

Figure 13-30: API permissions

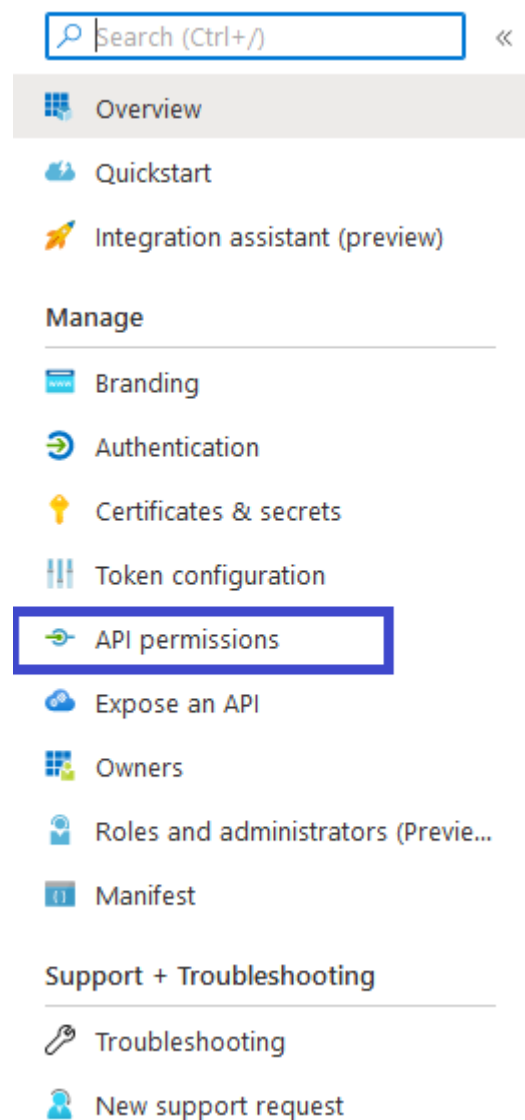

Figure 13-31: Configured Permissions

Refresh

Configured permissions

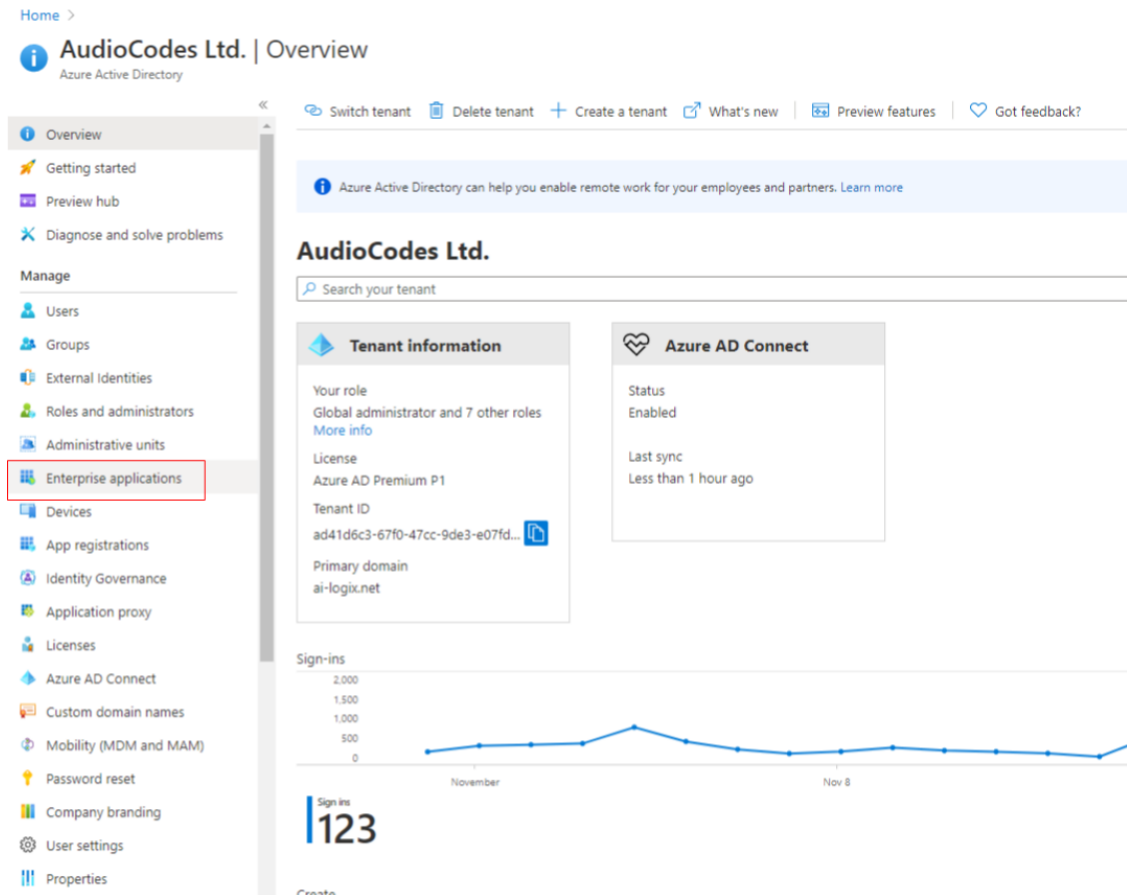

Applications are authorized to call APIs when they are granted permissions by users/admins as part of the consent process. The list of configured permissions should include all the permissions the application needs. [Learn more about permissions and consent](#)

When a user grants consent to an application, the user can sign in and the application may be granted access to the organization's data. [Learn more about consent and permissions](#)

User consent for applications
Configure whether users are allowed to consent for applications to access your organization's data. [Learn more](#)

☐ Do not allow user consent
An administrator will be required for all apps.

☐ Allow user consent for apps from verified publishers, for selected permissions (Recommended)
All users can consent for permissions classified as "low impact", for apps from verified publishers or apps registered in this organization.

☒ Allow user consent for apps
All users can consent for any app to access the organization's data.

⚠ With your current user settings, all users can allow applications to access your organization's data on their behalf. [Learn more about the risks](#)
Microsoft recommends allowing user consent only for verified app publishers or apps from your organization, for permissions you classify as "low impact". [Learn more](#)

Group owner consent for apps accessing data
Configure whether group owners are allowed to consent for applications to access your organization's data for the groups they own. [Learn more](#)

☐ Do not allow group owner consent
Group owners cannot allow applications to access data for the groups they own.

☐ Allow group owner consent for selected group owners
Only selected group owners can allow applications to access data for the groups they own.

☒ Allow group owner consent for all group owners
All group owners can allow applications to access data for the groups they own.

The second option is also supported with the following configuration:

Figure 13-35: User Consent Settings

Home > AudioCodes Ltd. > Enterprise applications >

Consent and permissions | User consent settings

Manage

- User consent settings
- Permission classifications

« Save Discard

When a user grants consent to an application, the user can sign in and the application may be granted access to the organization's data. [Learn more about consent and permissions](#)

User consent for applications
Configure whether users are allowed to consent for applications to access your organization's data. [Learn more](#)

☐ Do not allow user consent
An administrator will be required for all apps.

☒ Allow user consent for apps from verified publishers, for selected permissions (Recommended)
All users can consent for permissions classified as "low impact", for apps from verified publishers or apps registered in this organization.

⚠ Select permissions to classify as low impact

☐ Allow user consent for apps
All users can consent for any app to access the organization's data.

ℹ You have enabled limited user consent to apps, but users can still consent to apps accessing the groups they own. You can change settings for user consent to group data below.

Group owner consent for apps accessing data
Configure whether group owners are allowed to consent for applications to access your organization's data for the groups they own. [Learn more](#)

☐ Do not allow group owner consent
Group owners cannot allow applications to access data for the groups they own.

☐ Allow group owner consent for selected group owners
Only selected group owners can allow applications to access data for the groups they own.

☒ Allow group owner consent for all group owners
All group owners can allow applications to access data for the groups they own.

6. Save and then "Select permissions to classify as "low impact".

Step 3 Configure Certificates & Secrets

➤ Do the following:

1. In the Navigation pane, open the Certificates & Secrets page (**Manage > Certificate & Secrets**).

Figure 13-38: Certificates & Secrets

2. Click **+ New client secret** link.

Figure 13-39: Add a client secret

3. Enter a "Description", select "Expires" time and click **Add**.

A client secret is generated and displayed as below.

Figure 13-40: Client Secret

Client secrets

A secret string that the application uses to prove its identity when requesting a token. Also can be referred to as application password.

[+ New client secret](#)

Description	Expires	Value	
OIDC Auth Client Secret	7/2/2021	.ls8d76uf.fl5ZA18qNqd.44kdyVHryhy	

4. Copy the Value of the client secret for later configuration in the SmartTAP 360° Live Web (see [Step 4 Configure Azure Active Directory Client in SmartTAP 360° Live](#) on page 260).

Step 4 Configure OpenID Connect OIDC Client

To configure the OIDC Client in SmartTAP 360° Live, first collect all the required details from Web Application Registration in AAD. This includes the following:

- Application (Client) ID
- Directory (Tenant) ID
- Client Secret
- Redirect URI

➤ **Do the following:**

1. Login to the SmartTAP 360° Live Web with a user that has "sysAdmin" role.
2. Open the OAuth Client Config screen (**System > WEB > OAuth Client Config**).

Figure 13-41: OpenID Connect

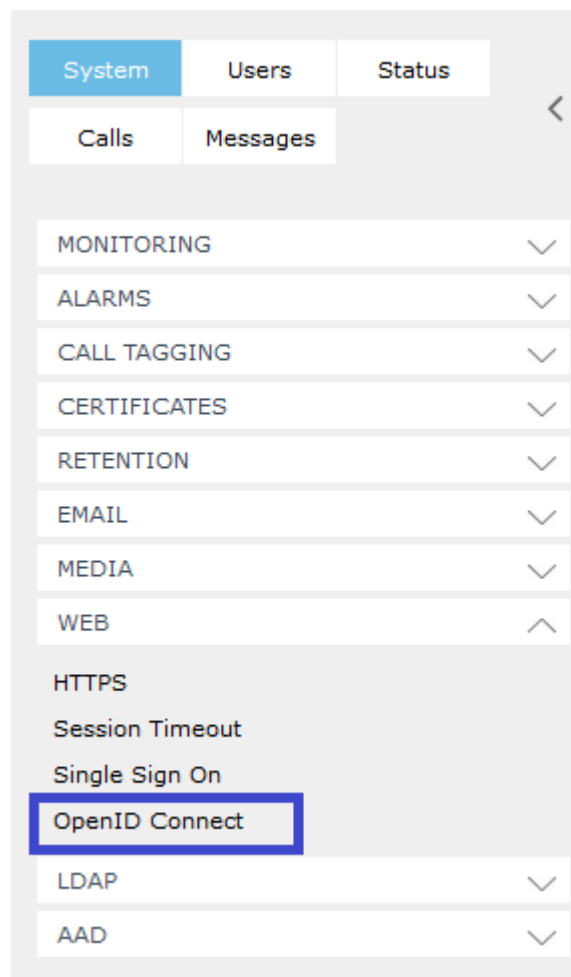

Figure 13-42: OpenID Connect Client Configuration

The screenshot shows the 'Add/Modify OpenID Connect Client Configuration' form. The form fields are as follows:

Field	Value
Directory (Tenant) ID	ad41d6c3-67f0-47cc-9de3-e07fd185c1c7
Application (Client) ID	dc8f153a-98b8-44ea-8cfd-17e2de1b382a
Client Secret
Redirect URI	p://localhost/smarttap/status/target_status.jsf

A confirmation dialog titled 'Modify OIDC Client Configuration' is displayed over the form. The dialog contains the following text:

You are about to change the OIDC client configuration parameters. This will affect Azure Active Directory user login. Do you wish to continue?

The dialog has two buttons: **SUBMIT** (green) and **CANCEL** (red).

3. Enter the details and then click **SUBMIT**.
4. A confirmation message is displayed that the OIDC client configuration has been successfully saved to SmartTAP 360° Live.

Figure 13-43: OID Client Configuration Parameters Successfully Set

The screenshot shows the 'Add/Modify OpenID Connect Client Configuration' form with a success message at the top:

• ***OIDC client configuration parameters successfully set.***

The form fields are as follows:

Field	Value
Directory (Tenant) ID	ad41d6c3-67f0-47cc-9de3-e07fd185c1c7
Application (Client) ID	dc8f153a-98b8-44ea-8cfd-17e2de1b382a
Client Secret	
Redirect URI	http://localhost/smarttap/status/target_status

A **SUBMIT** button (green) is located at the bottom right of the form.

Step 5 Assign Security Profile to Azure Active Directory user in SmartTAP 360° Live

This step describes how to assign a user to "agent" security profile in SmartTAP 360° Live.

➤ To assign a security profile:

1. Login to SmartTAP 360° Live with a user that has "userAdmin" permissions.
2. Open the View/Modify Users page (**Users** tab > **User Management** > **View/Modify Users**).

Figure 13-44: View/Modify Users

3. Assign "agent" security profile and then click . A confirmation message is displayed:

Figure 13-45: User Successfully Updated

4. Login to SmartTAP 360° Live using Microsoft Login Credentials.

- On the SmartTAP 360° Live login page, click **Sign In with Microsoft**.

Figure 13-46: Microsoft Sign in

A screenshot of a login form. It features two input fields: 'Login Id' and 'Password', both with blue labels. Below the 'Password' field is a grey 'Log in' button. A horizontal line with the word 'Or' in the center separates this from a 'Sign In with Microsoft' button, which is highlighted with a blue border.

The user is redirected to Microsoft MFC Login page:

Figure 13-47: Microsoft MFC Login Page

A screenshot of the Microsoft MFC Login page. It displays the Microsoft logo at the top left, followed by the text 'Sign in'. Below this is a text input field with the placeholder 'Email, phone, or Skype'. Underneath the input field are two links: 'Can't access your account?' and 'Sign-in options'. A blue 'Next' button is located in the bottom right corner.

- Enter the Microsoft credentials

Figure 13-48: Sign InThe image shows a Microsoft sign-in interface. At the top left is the Microsoft logo. Below it, the text "Sign in" is displayed in a large, bold font. Underneath, there is a text input field containing the email address "debajyotid@smarttap.onmicrosoft.com". Below the input field, there are two links: "Can't access your account?" and "Sign-in options". At the bottom right, there is a blue button with the text "Next".

Microsoft

debajyotid@smarttap.onmicrosoft.com

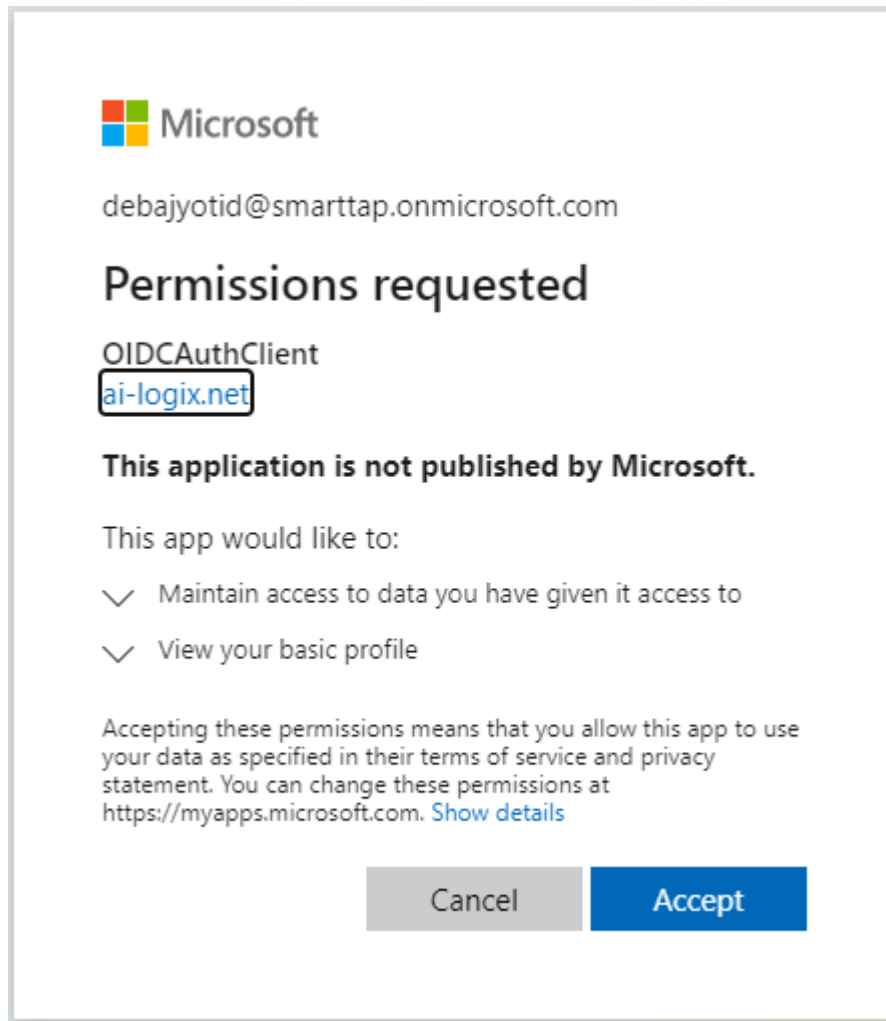

[Can't access your account?](#)

[Sign-in options](#)

Next

- Allow permission to the client app to use user authentication data.

Figure 13-49: Permissions Requested

The user is re-directed to SmartTAP 360° Live URI configured in AAD (see [Step 1 Register App in Azure Active Directory](#) on page 267 i.e. http://localhost/SmartTAP 360° Live/status/target_status.jsf

Figure 13-50: User Device Status

5. An Azure Active Directory user logs off from SmartTAP 360° Live Web.

Figure 13-51: Logout

6. User is prompted to select the Microsoft account that needs to be signed out.

Figure 13-52: Pick an Account

7. When the account is selected, the user is redirected to the SmartTAP 360° Live log off page.

Figure 13-53: SmartTAP 360° Live LogOff Page

14 Enable Users with Compliance Recordings

This procedure describes how to enable users with Compliance Recordings using PowerShell scripts on the local machine that need to run with permissions on the required Teams environment. This step includes the following procedures:

- Prerequisite - Join Calls in Teams Tenant
- Create Compliance Recording Policy

Prerequisite - Join Calls in Teams Tenant

This procedure describes how to provide SmartTAP 360° with permissions to join calls in your Teams' tenant. The procedure should be performed by your Office 365 Administrator.

➤ To join calls in your Teams tenant:

1. Paste the following URL in your browser with parameters shown below:

<https://login.microsoftonline.com/common/adminconsent?>

- client_id=XXXX

Where XXXX is the SmartTAP 360° Bot app ID from BOT service that was created in Step 2-1 Configure Service Channel which can be extracted from Manage > BoT Service. This is required to authenticate your Azure subscription.

- &state=12345
- [&redirect_uri=https://login.microsoftonline.com/common/oauth2/nativeclient](https://login.microsoftonline.com/common/oauth2/nativeclient)
 - ◆ 'nativeclient' is the SmartTAP 360° Bot app ID from BOT service that was created and which can be extracted from the Manage > BoT Service page. This is required to authenticate your Azure subscription.
- &scope=
- <https://graph.microsoft.com/Calls.AccessMedia.All>
- <https://graph.microsoft.com/Calls.Initiate.All>
- <https://graph.microsoft.com/Calls.InitiateGroupCall.All>
- <https://graph.microsoft.com/Calls.JoinGroupCall.All>
- <https://graph.microsoft.com/Calls.JoinGroupCallAsGuest.All>
- <https://graph.microsoft.com/OnlineMeetings.Read.All>
- <https://graph.microsoft.com/OnlineMeetings.ReadWrite.All>

The Authentication Settings are displayed and the connection is authenticated.

Create Compliance Recording Policy

This procedure describes how to create a Compliance Recording Policy:

1. Create Application Instance
2. Create New Compliance Recording Policy
3. Set Compliance Recording Policy
4. Grant Policy to a Recorded User

Create Application Instance

This procedure describes how to create an Application Instance on the local machine. This action can be performed by 'Admin' user.

➤ **To create an Application instance:**

1. Download Skype for Business module to be able to record Teams users with SmartTAP 360°. The Microsoft Teams Administrator must create a Compliance Recording Policy for SmartTAP 360° and assign it to the recorded users. Refer to the following link:

<https://docs.microsoft.com/en-us/skypeforbusiness/set-up-your-computer-for-windows-powershell/download-and-install-the-skype-for-business-online-connector>

2. Create a new session with the relevant Teams tenant:

```
PS .:\> Import-Module SkypeOnlineConnector
PS .:\> $sfbSession = New-CsOnlineSession
PS .:\> Import-PSSession $sfbSession
```

Refer to: <https://docs.microsoft.com/en-us/office365/enterprise/powershell/manage-skype-for-business-online-with-office-365-powershell>

3. Enter the following commands:

```
PS .:\> New-CsOnlineApplicationInstance -UserPrincipalName <User
Principal Name> -DisplayName <displayName> -ApplicationId
<SmartTAPBOTID>
```

Where:

- <UserPrincipalName>: AD BOT entity - Create new Organizational user with onmicrosoft.com domain that is assigned to the BOT.
- <SmartTAPBOTID> -Application ID that was created during the creation of the BOT Service channel (see Step 2-1 Configure Service Channel). This value can be extracted from the Settings screen (see example figure below).
- <displayName>: Free text Description field

Output similar to the following is displayed:

```
RunspaceId      : 15eea8f7-970e-4061-893e-3573cb5e973b
ObjectId        : fd13dab0-dd31-4b58-86d6-122fa07e250f
TenantId        : ad41d6c3-67f0-47cc-9de3-e07fd185c1c7
UserPrincipalName : STTeamsbotstandartlb2@smarttap.onmicrosoft.com
ApplicationId    : ff6fc00a-fc73-4062-b99f-55ff0e09b779
DisplayName      : STTeamsbotstandartlb2
PhoneNumber      :
```

Figure 14-2: Create Application Instance

The screenshot shows the 'StTeamsBot | Settings' page. The left sidebar contains navigation links: Overview, Activity log, Access control (IAM), Tags, Bot management, Test in Web Chat, Analytics, Channels, Settings (selected), Speech priming, Bot Service pricing, Support + troubleshooting, and New support request. The main content area has a 'Save' and 'Discard' button at the top. Below are sections for 'Upload custom icon' (30K max, png only), 'Display name *' (StTeamsBot), 'Bot handle' (StTeamsBot), 'Description', 'Configuration' (Messaging endpoint: https URL, Enable Streaming Endpoint checkbox), 'Microsoft App ID (Manage)' (51c35db6-1664-494c-936b-2cc85bdcf4b), 'Analytics' (Application Insights instrumentation key: 0e20465d-1c39-42b8-ab7e-46e6e44aa2d4, Application Insights API key, Application Insights Application ID: 177d50a7-07db-4c14-a2c9-1e5cc4b6799e), and 'OAuth Connection Settings' (No settings defined). A blue 'Add Setting' button is at the bottom.

4. Enter the following command:

```
PS .:\> Sync-CsOnlineApplicationInstance -ObjectId <ObjectID>
```

Where <ObjectID> is the ObjectID that was generated from the above command. Note this value for procedure in Step 4-3-2 Set Compliance Recording Policy.

Create New Compliance Recording Policy

This procedure describes how to create a new Compliance Recording Policy.

➤ To create a new compliance recording policy:

1. Enter the following commands:

```
PS .:\> New-CsTeamsComplianceRecordingPolicy -Tenant <TenantID> -
Enabled $true -Description <free text> <ComplianceRecordingBot_
PolicyName>
```

- <TenantID>: Azure tenant ID of customer's Microsoft Azure subscription (Microsoft App ID)
- <ComplianceRecordingBot_PolicyName>: User-defined name of the Compliance Recording Policy
- **Example:**

```
New-CsTeamsComplianceRecordingPolicy -Tenant ad41d6c3-67f0-47cc-9de3-e07fd185c1c7 -Enabled $true -Description "Test policy created by admin" smarttap5v3stln2
```

2. After 30-60 seconds, the policy should be displayed. Enter the following command to verify that your policy was added correctly:

```
PS ..\> Get-CsTeamsComplianceRecordingPolicy  
<ComplianceRecordingBot_PolicyName>
```

For more information, refer to: [Create New Compliance Recording Policy](#)

Set Compliance Recording Policy

This procedure describes how to set the Compliance Recording policy.

➤ To set the Compliance Recording Policy:

1. Enter the following commands:

```
PS ..\> Set-CsTeamsComplianceRecordingPolicy -Tenant <TenantID> -  
Identity <ComplianceRecordingBot_PolicyName> -  
ComplianceRecordingApplications @(New-  
CsTeamsComplianceRecordingApplication -Tenant <TenantID> - Parent  
ComplianceRecordingBot -Id <ObjectID>) -<policy-based recording  
application behavior> $true/false
```

- **<TenantID>**: Azure tenant ID of customer's Microsoft Azure subscription (Microsoft App ID)
- **<ComplianceRecordingBot_PolicyName>**: User-defined name of the Compliance Recording Policy that was defined in Step 4-3-1 Create New Compliance Recording Policy
- **<ObjectID>**: Object ID that was generated in Step 4-2 Create Application Instance
- **<policy-based recording application behavior>**: \$true/false

Where <policy-based recording application behavior> is one of the following:

- ◆ **RequiredBeforeCallEstablishment (default: false)**: Indicates whether the policy-based recording application must be in the call before the call is allowed to establish. If this is set to True, the call will be cancelled if the policy-based recording application fails to join the call. If this is set to False, call establishment will proceed normally if the policy-based recording application fails to join the call.

- ◆ **RequiredBeforeMeetingJoin (default: false):** Indicates whether the policy-based recording application must be in the meeting before the user is allowed to join the meeting. If this is set to True, the user will not be allowed to join the meeting if the policy-based recording application fails to join the meeting. The meeting will still continue for users who are in the meeting. If this is set to False, the user will be allowed to join the meeting even if the policy-based recording application fails to join the meeting.
- ◆ **RequiredDuringCall (default: false):** Indicates whether the policy-based recording application must be in the call while the call is active. If this is set to True, the call will be cancelled if the policy-based recording application leaves the call or is dropped from the call. If this is set to False, call establishment will proceed normally if the policy-based recording application leaves the call or is dropped from the call.
- ◆ **RequiredDuringMeeting (default: false):** Indicates whether the policy-based recording application must be in the meeting while the user is in the meeting. If this is set to True, the user will be ejected from the meeting if the policy-based recording application leaves the meeting or is dropped from the meeting. The meeting will still continue for users who are in the meeting. If this is set to False, the user will not be ejected from the meeting if the policy-based recording application leaves the meeting or is dropped from the meeting.
- ◆ **Priority:** Determines the order in which the policy-based recording applications are displayed in the output of the Get-CsTeamsComplianceRecordingPolicy cmdlet.
- ◆ **ConcurrentInvitationCount:** Determines the number of invites to send out to the application instance of the policy-based recording application.
- ◆ **Example:**

```
Set-CsTeamsComplianceRecordingPolicy -Tenant ad41d6c3-67f0-47cc-9de3-e07fd185c1c7 -Identity smarttap5v3stln2 -
ComplianceRecordingApplications `@(New-
CsTeamsComplianceRecordingApplication -Tenant ad41d6c3-67f0-47cc-9de3-e07fd185c1c7 -Parent smarttap5v3stln2 -id 0535d120-
cded-4305-a6ef-3e2dbb77c12e)
```

- ◆ Set application behavior to **False** to avoid disconnection of the calls if Bot fails to join:

```
Set-CsTeamsComplianceRecordingApplication -Identity
'Tag:smarttap5v3stln/ID' -RequiredBeforeCallEstablishment $false -
RequiredDuringCall $false -RequiredBeforeMeetingJoin $false -
RequiredDuringMeeting $false
```

2. After 30-60 seconds, the policy should be displayed. Enter the following command to verify that your policy was updated correctly:

```
PS .:\> Get-CsTeamsComplianceRecordingPolicy  
<ComplianceRecordingBot_PolicyName>
```

For more information, refer to [Set Compliance Recording Application](#)

Grant the Policy to a Recorded User

This procedure describes how to grant policies to a single recorded user and to grant policies to a Security Group containing multiple users.

➤ To grant policies to a single recorded user:

- Enter the following commands:

```
PS .:\> Grant-CsTeamsComplianceRecordingPolicy -Identity <Identity> -  
PolicyName ComplianceRecordingBot -Tenant <TenantID>
```

Where:

- Identity: UPN of recording-targeted user
- <TenantID>: Azure tenant ID of customer's Microsoft Azure subscription (Microsoft App ID)

For more information, refer to <https://docs.microsoft.com/en-us/powershell/module/skype/grant-csteamscompliancerecordingpolicy?view=skype-ps>

➤ To apply policies to a Security Group:

1. Install the following modules before applying the policy:

```
Install-Module -Name MicrosoftTeams
```

Or

```
Update-Module MicrosoftTeams
```

2. Connect to the module:

```
Connect-MicrosoftTeams
```

3. Retrieve Active Directory users:

```
Connect-AzureAD
```

4. Assign the policy to a Security group as shown in the example below:

```
New-CsGroupPolicyAssignment -GroupId cbc58572-7d1f-409f-bc7d-525a9718e299 -PolicyType TeamsComplianceRecordingPolicy -PolicyName "STTeamsbotstandartlb2" -Rank 1
```

Refer to the following link: <https://docs.microsoft.com/en-us/microsoftteams/assign-policies>
