AudioCodes

Product Notice #0213

Release of Beta Version 6.8 for MSBR

Notice Subject

AudioCodes announces the release of Beta Version 6.8 for its Multi-Service Business Router (MSBR) product family.

Notice Date

June 10, 2014

Notice Effective Date

Immediate

Affected Product Family / Part Numbers

■ Mediant 500L MSBR

■ Mediant 500 MSBR

■ Mediant 800 MSBR

■ Mediant 800B MSBR

Notice Details

This release completes a major development effort to position the MSBR as an intelligent, customer-premises equipment (CPE) platform, offering state-of-the-art capabilities for **Service Providers**. The feature highlights of this release include:

■ IPv6 routing:

- Dual stack IPv4/IPv6
- DHCPv6 server and client
- SLAAC and ICMPv6

- Firewall, ACL and QoS
- Dynamic routing protocols (available in Q3/2014)

■ Increase in session capacity of the integrated Session Border Controller (SBC) and Cloud Resiliency Package (CRP) for hosted VoIP and SIP Trunking services (See the SBC Sessions chapter in the Release Notes).

■ Limitation of single VRF for services and routing protocols has been removed. Each VRF now supports separate data services and routing protocols.

■ Source-based routing (IPv4).

For a complete list of the Release 6.8 features, refer to the *Release Notes* on our Web site at http://www.audiocodes.com/filehandler.ashx?fileid=3810331.

This release also introduces a set of task-oriented CLI configuration guides to assist the installer in mastering the MSBR through step-by-step configuration examples. These guides cover multiple topics, including:

■ Layer-2 bridging – http://www.audiocodes.com/filehandler.ashx?fileid=4330786

■ Advanced networking – http://www.audiocodes.com/filehandler.ashx?fileid=4325284

■ LAN/WAN Access – http://www.audiocodes.com/filehandler.ashx?fileid=4330419

■ System – http://www.audiocodes.com/filehandler.ashx?fileid=4335758

■ Security – http://www.audiocodes.com/filehandler.ashx?fileid=4287890

■ Hosted SBC - http://www.audiocodes.com/filehandler.ashx?fileid=4335105
