

MEETING INSIGHTS **EDGE**

AI-powered meeting intelligence. Fully local. Fully controlled.

Meeting Insights Edge captures conversations across rooms, UC platforms, enterprise telephony and recorded media, transforming them into live and recorded transcripts, multilingual voice and text translations, customer-defined insights and secure, searchable organizational knowledge. Backed by more than 30 years of AudioCodes voice expertise, it is designed for regulated and mission-critical organizations.

Capture Every Conversation

Capture conversations from meeting rooms, cloud and on-premises UC platforms, enterprise telephony via IP PBXs, contact centers, recorded media and monitored folders.

Intelligence in Real Time

Follow live transcripts, read or hear real-time translations, securely join live sessions and receive keyword and phrase alerts.

Organizational Knowledge

Generate customer-defined summaries and insights, and ask natural-language questions across individual meetings or the entire archive, with citations to the original transcript.

Customer-Controlled by Design

Process and retain recordings, transcripts, translations and insights within the customer environment, including air-gapped deployments, with customer-defined access, retention and audit policies.

Solution Schema

Capture from:

-  **Meetings:** Meeting rooms and UC platforms
-  **Telephony:** Enterprise calls via IP PBXs and contact centers
-  **Media:** Recorded audio and video files and monitored folders

Secure Capture

Local AI Intelligence

Governed Archive

Search, Ask and Share

Deliver value to:

-  **People:** Participants, teams and authorized viewers
-  **Organization:** Management and compliance teams

Meeting Insights Edge

Key Features

- Capture live and recorded conversations from meeting rooms, cloud and on-premises UC platforms, enterprise telephony, contact centers and recorded media.
- Follow live speech-to-text transcripts, hear real-time bidirectional speech-to-speech translations, securely join live sessions and receive keyword and phrase alerts.
- Generate customer-defined summaries, decisions, action items and structured insights using customizable templates.
- Ask natural-language questions across an individual meeting, selected folder or the entire archive, with answers cited to the original transcript.
- Identify and rename speakers, and save their voice profiles for automatic recognition in future meetings.
- Create traceable meeting records with timestamps, synchronized playback, transcript editing and version history.
- Process and retain recordings, transcripts, translations, summaries and insights within the customer-controlled environment.

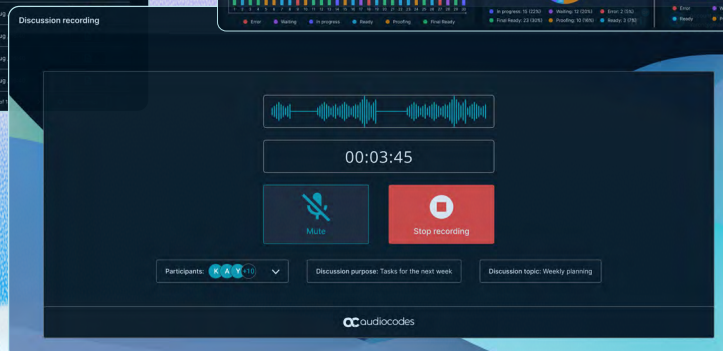

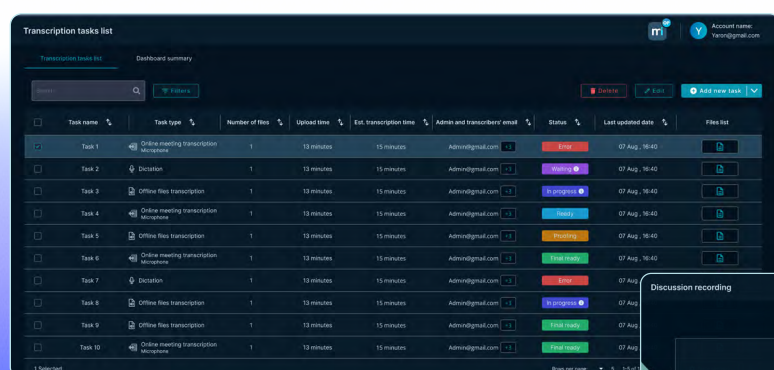

How does it work?

Local AI-Powered Intelligence

- ✓ Live and recorded transcription, speaker identification, and voice and text translation
- ✓ Customized summaries, organizational insights and **Ask MIA** search across the meeting archive

Capture Conversations from Any Source

- ✓ Meeting rooms and cloud or on-premises UC platforms
- ✓ Enterprise telephony calls via IP PBXs and contact centers
- ✓ Recorded audio and video files and monitored network folders
