Meeting Insights On-Prem

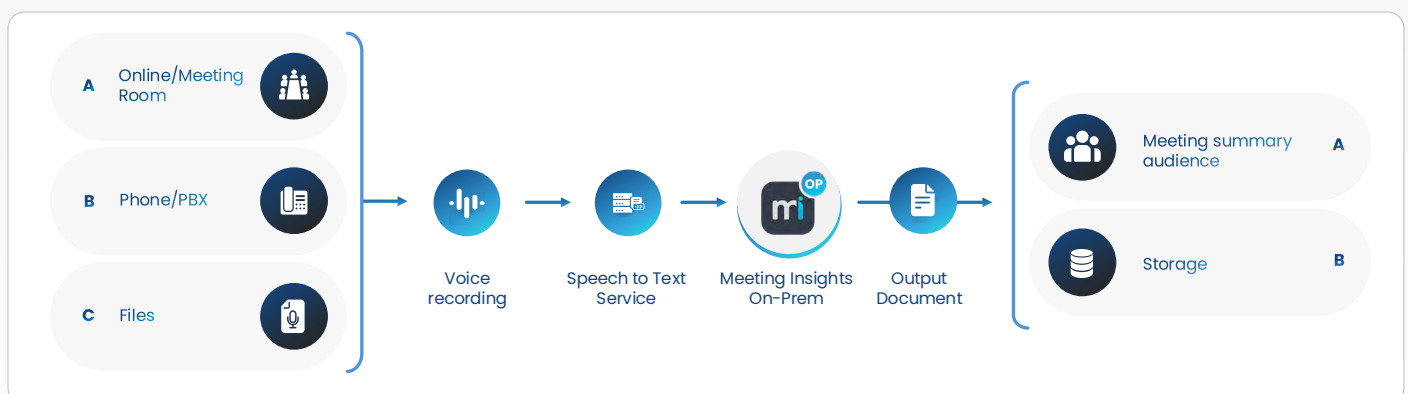

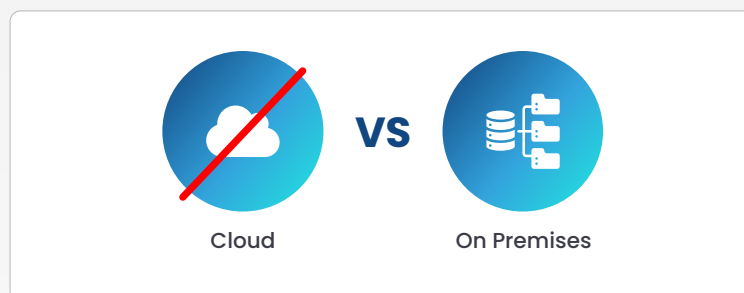

Meeting Insights On-Prem empowers organizations to **capture, organize, and secure** every critical detail of their meetings in a **centralized, searchable platform**, ensuring that no valuable insight slips through the cracks. With enterprise-grade security built in, Meeting Insights On-Prem is the latest component of AudioCodes' legacy of reliable voice services trusted by Fortune 100 companies for over 30 years.

Meeting Insights On-Prem is a solution for automatically generating documentation and insights from work meetings, in line with **organizational protocols and templates**. The solution is installed on a **local server** and provides a perfect answer to the strict requirements of security, healthcare and financial organizations. Meeting Insights On-Prem is an innovative and advanced solution that saves time, improves accuracy and boosts organizational efficiency, while adhering to **information security standards and regulations**.

Meetings are vital for organizations to discuss issues and drive progress. For those meetings to be effective, proper documentation is crucial, as it ensures transparency, drives orderly follow-up and boosts efficiency. However, creating accurate and structured meeting documentation is time-consuming and often done sporadically, resulting in incomplete or out-of-date records.

Most automatic transcription solutions rely on cloud resources, but such solutions are unsuitable for organizations where internet use is prohibited. AudioCodes Meeting Insights On-Prem is an **exclusively on-premises solution**, built on our in-house developed transcription engine which is fully adaptable to meet specific organizational requirements.

Meeting Insights On-Prem Key Features

- Save time and gain valuable meeting insights with real-time recording, transcription and automatic meeting summaries..
- Capture only what matters to you using ad-hoc dictation and transcription in real time.
- Verify your dictation and transcription on-the-fly with a built-in proofing application - no need for professional transcribers
- Efficient mass transcription by uploading a batch of audio files and proofing it in your preferred time. Each file can be allocated to different users for time efficiency.
- Reliable transcription by using organization-specific glossary of terms
- Who said what - Automatic identification of speakers in transcription

How it works?

Automatic insights powered by AI

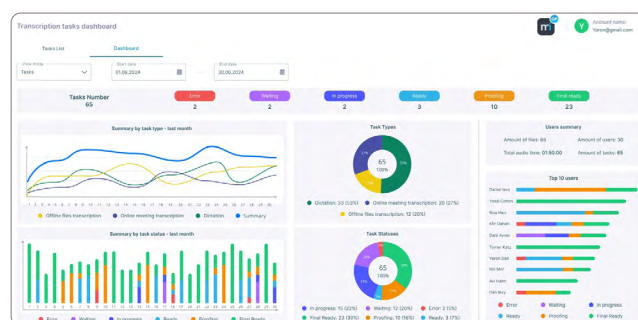

- Automatic summaries and insights generated using local Small Language Model (SLM) technology
- Semantic search in organizational meetings with the ability to query the content of the meetings using natural language.

Connectivity and easy accessibility via:

- Microphone device in a meeting room
- Apps like Cisco Jabber, etc.
- Connectivity with telephony systems and call centers using AudioCodes SBC technology

Part of AudioCodes' wide range of on-prem solutions

- **Interaction Insights** call recording solution enables compliance with regulatory requirements
- **OVOC** empowers IT managers to monitor and control their voice infrastructure

The screenshot displays the 'MIA OP Tasks List' dashboard. It features a table with columns for Task Name, Task Type, File Number, Creation Time, Estimated Transcription Time, Transcribers Assigned, Transcription Status, and Last Status Update Time. The table lists various tasks, including 'Online meeting transcription' and 'Offline file transcription', with their respective statuses and assigned transcribers.
